**Statement of W-CDMA Function Disable**

---

Product: Mobile Phone  
Model No.: F-05G  
FCC ID: VQK-F05G

---

**W-CDMA Band I, VI, XIX**

The above device (mobile phone) has capability of W-CDMA Band I, VI, XIX. These functions cannot be activated by the user in case the mobile phone is used or switched on in the United States. These functions can also not be activated by the user in case the mobile phone is outside of the service area of a mobile phone network while switched on. In both cases, these functions are also not activated automatically.

When the mobile phone is inside the service area of a mobile phone network, it will search all available cellular networks. These functions will not switch on automatically unless mobile phone detects networks having W-CDMA Band I, VI, XIX or if the mobile phone detect network having W-CDMA Band V. Therefore these functions are never activated in the United States where there is no commercial network for those services. While searching for the network the mobile phone does not transmit any signal.

Also, the user access to all functions related to W-CDMA Band I, VI, XIX will be disabled where it cannot detect networks having those services, or where it can detect network having W-CDMA Band V and this prevents the user from manually switching on these functions.
