**Statement of W-CDMA Function Disable**

---

Product: Mobile Phone  
Model No.: F-08B  
FCC ID: VQK-F08B

---

**W-CDMA Band I and Band IX**

The above device (mobile phone) has capability of W-CDMA Band I and Band IX. This function cannot be activated by the used in case the mobile phone is used or switched on in the United States. This function can also not be activated by the used in case the mobile phone is outside of the service area of a mobile phone network while switched on. In both cases, this function is also not activated automatically.

When the mobile phone is inside the service area of a mobile phone network, it will search all available cellular networks. This function will not switch on automatically unless mobile phone detects networks having W-CDMA Band I and Band IX. Therefore this function is never activated in the United States where there is no commercial network for those services. While searching for the network the mobile phone does not transmit any signal.

Also, the user access to all functions related to W-CDMA Band I and Band IX will be disabled where it cannot detect networks having those services and this prevents the user from manually switching on this function.
