Statement of GSM and W-CDMA Function Disable

Product: Fujitsu F-09A Cellular Phone
Model No.: F-09A
FCC ID: VQK-F09A

GSM900, DCS1800, W-CDMA Band I and IX

The above device (cellular phone) has capability of GSM900, DCS1800, W-CDMA Band I and IX. These functions cannot be activated by the used in case the cellular phone is used or switched on in the United States. These functions can also not be activated by the used in case the cellular phone is outside of the service area of a cellular phone network while switched on. In both cases, these functions are also not activated automatically.

When the cellular phone is inside the service area of a cellular phone network, it will search all available cellular networks. These functions will not switch on automatically unless cellular phone detects networks having GSM900, DCS1800, W-CDMA Band I and IX. Therefore these functions are never activated in the United States where there is no commercial network for those services. While searching for the network the cellular phone does not transmit any signal.

Also, the user access to all functions related to GSM900, DCS1800, W-CDMA Band I and IX will be disabled where it cannot detect networks having those services and this prevents the user from manually switching on these functions.

In case you have any question, please contact us,
