**Overall Assessment Letter for CT9@9k  
FCC id: VQRCT9A9K**

I have reviewed this composite application and find it compliant.  
This is an application for a Cellular Phone supporting GSM/GPRS and Bluetooth.  
The GSM supports 1900 MHZ frequency range in both GSM and GPRS modes.

Please note the following:

1: SAR

The equipment was tested for both Held to Ear and Body SAR.

The Body SAR was tested with a separation distance of 1.5 cms which is stipulated in the user manual.

The highest reported SAR was 0.467 W/kg.

I have reviewed the SAR using the FCC provided Checklist and find it compliant.

I have attended BABT SAR training in June 2007.

2: Bluetooth and Co-transmission

The Bluetooth transmitter is categorically exempt and below the low threshold. No SAR evaluation occurred with this transmitter operating singly.

The product supports simultaneous transmission between the GSM/GPRS transmitter and the Bluetooth. There was no significant change in Body SAR value when both transmitters were active.

Yours sincerely

Allen Ferry
