1 Assessment

The following device was evaluated against the applicable criteria specified in FCC rules Parts 15.247 of Title 47 of the Code of Federal Regulations and the relevant ISED Canada standard RSS-247.

No deviations were ascertained.

Company	Description	Model #
Juniper Systems, Inc.	AG3 is an ultra-rugged handheld computer for field data collection.	AG3

Responsible for Testing Laboratory:

Date	Section	Name	Signature
2020-08-14	Compliance	(Lab Manager)	0
		Cindy Li	Cindy Li

Responsible for the Report:

		Yuchan Lu	
2020-08-14	Compliance	(Test Engineer)	
Date	Section	Name	Signature

The test results of this test report relate exclusively to the test item specified in Section3.

CETECOM Inc. USA does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item. The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CETECOM Inc. USA.

2 Administrative Data

2.1 Identification of the Testing Laboratory Issuing the EMC Test Report

Company Name:	CETECOM Inc.
Department:	Compliance
Street Address:	411 Dixon Landing Road
City/Zip Code	Milpitas, CA 95035
Country	USA
Telephone:	+1 (408) 586 6200
Fax:	+1 (408) 586 6299
EMC Lab Manager:	Cindy Li
Responsible Project Leader:	Sangeetha Sivaraman

2.2 Identification of the Client

Client's Name:	Juniper Systems, Inc.
Street Address:	1132 W 1700 N
City/Zip Code:	Logan, UT 84321
Country:	USA

2.3 Identification of the Manufacturer

Manufacturer's Name:	
Manufacturers Address:	Come en Client
City/Zip Code	
Country	

3 Equipment Under Test (EUT)

3.1 EUT Specifications

Model No:	AG3
HW Version :	0.1
SW Version :	7.1.2
FCC-ID:	VSF-AG3
IC-ID:	7980A-AG3
HVIN:	AG3
PMN:	FL7502
Product Description:	AG3 is an ultra-rugged handheld computer for field data collection.
Frequency Range / number of channels:	Manufature: Silex Module name/number: SX-SDMAC-2832S+ FCC/IC ID: N6C-SDMAC / 4908A-SDMAC Nominal band: 2400 MHz – 2483.5 MHz; Center to center: 2412 MHz (ch 1) – 2462 MHz (ch 11), 11 channels
Type(s) of Modulation:	BPSK, QPSK, 16-QAM, 64QAM
Modes of Operation:	802.11b/g/n, 20MHz
Antenna Information as declared:	 2402 MHz: -0.11 dBi 2442 MHz: 1.01 dBi 2480 MHz: 2.28 dBi
Max. Peak Output Power:	Conducted Power 24.84 dBm
Power Supply/ Rated Operating Voltage Range:	Vmin: 9.65 VDC/ Vnom: 12/24 VDC / Vmax: 30 VDC
Operating Temperature Range:	Low -30°C, Nominal 20°C, High 60°C
Other Radios included in the device:	 WCDMA, LTE Manufature: Sierra Wireless Module name/number: WP7603 FCC/IC ID: N7NWP76C / 2417C-WP76C Classic BT, BLE Manufature: Silex Module name/number: SX-SDMAC-2832S+ FCC/IC ID: N6C-SDMAC / 4908A-SDMAC GNSS/GPS

	 Manufature: u-blox AG Module name/number: NEO-M8N Sensus Panther Raduio Manufature: Sensus Module name/number: Panther
Sample Revision:	□Prototype Unit; □Production Unit; ■Pre-Production

3.2 EUT Sample details

EUT # Serial Number		HW Version	SW Version	Notes/Comments
1	272323	0.1	7.1.2	Radiated Emissions

3.3 Accessory Equipment details

AE #	Туре	Manufacture	Model	P/N
1	AC/DC Adapter	Phihong Technology Co., Ltd	PSAA20R-120L6	164691695

3.4 Support Equipment

SE #	Description
1	Interface card (control board).
2	Laptop, Dell Latitude E6530
3	Mouse
4	Serial cable and serial-to-USB adapter
5	USB cable
6	USB cable and USB-to-Ethernet adapter

3.5 Test Sample Configuration

EUT Set-up #	Combination of AE used for test set up	Comments
1	EUT#1+ AE#1	 QCARCT used to configure the WLAN radio to low, mid and high channels provided by the client that will not be available to the end user. RIU radio [US] Channel 8 (956.34375MHz) is co-transmitting simultaneously using Panther RIU/LPL Hardware Protocol Application provided by client that is not available to the end user. For radiated measurements, the internal antenna was connected.
2	EUT#1+ AE#1	 QCARCT used to configure the WLAN radio to low, mid and high channels provided by the client that will not be available to the end user. RIU radio [CAN.] Channel 6 (952.91875MHz) is co-transmitting simultaneously using Panther RIU/LPL Hardware Protocol Application provided by client that is not available to the end user. For radiated measurements, the internal antenna was connected.

3.6 Justification for Worst Case Mode of Operation

During the testing process, the EUT was tested with transmitter sets on WLAN low, mid and high channels, and cotransmitting with RIU radio on RIU radio [US] Channel 8 (956.34375MHz) or RIU radio [CAN.] Channel 6 (952.91875MHz). The EUT was configured to the highest duty cycle and maximum output power.

For radiated measurements, all data in this report shows the worst case between horizontal and vertical antenna polarizations and for all orientations of the EUT.

4 Subject of Investigation

The objective of the measurements done by CETECOM Inc. was to assess the performance of the EUT according to the relevant requirements specified in FCC rules Part 15.247 of Title 47 of the Code of Federal Regulations and Radio Standard Specification RSS-247 of ISED Canada.

Testing procedures are based on 558074 D01 DTS Meas Guidance v05r02 – "GUIDANCE FOR PERFORMING COMPLIANCE MEASUREMENTS ON DIGITAL TRANSMISSION SYSTEMS (DTS) OPERATING UNDER SECTION 15.247" - April 2, 2019, by the Federal Communications Commission, Office of Engineering and Technology, Laboratory Division.

5 Measurement Results Summary

Test Specification	Test Case	Temperature and Voltage Conditions	Mode	Pass	NA	NP	Result
§15.247(a)(1) RSS-247 5.2(1)	Emission Bandwidth	Nominal	802.11 b/g/n				Note1 Note2
§15.247(e) RSS-247 5.2(2)	Power Spectral Density	Nominal	802.11 b/g/n				Note1 Note2
§15.247(b)(1) RSS-247 5.4(4)	Maximum Conducted Output Power and EIRP	Nominal	802.11 b/g/n				Note1 Note2
§15.247(d) RSS-247 5.5	Band edge compliance Unrestricted Band Edges	Nominal	802.11 b/g/n				Note1 Note2
§15.247; 15.209; 15.205 RSS-Gen 8.9; 8.10	Band edge compliance Restricted Band Edges	Nominal	802.11 b/g/n				Note1 Note2
§15.247(d); §15.209 RSS-Gen 6.13	TX Spurious emissions- Radiated	Nominal	802.11g				Complies
§15.207(a) RSS Gen 8.8	AC Conducted Emissions	Nominal	802.11g				Complies

Note1: NA= Not Applicable; NP= Not Performed.

Note2: Leveraged from module certification FCC ID: N6C-SDMAC

6 <u>Measurements</u>

6.1 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus, with 95% confidence interval (in dB delta to result), based on a coverage factor k=1.

Radiated measurement

9 kHz to 30 MHz 30 MHz to 1000 MHz 1 GHz to 40 GHz	±2.5 dB (Magnetic Loop Antenna) ±2.0 dB (Biconilog Antenna) ±2.3 dB (Horn Antenna)
Conducted measurement	
150 kHz to 30 MHz	±0.7 dB (LISN)
RF conducted measurement	±0.5 dB

According to TR 102 273 a multiplicative propagation of error is assumed for RF measurement systems. For this reason the RMS method is applied to dB values and not to linear values as appropriate for additive propagation of error. Also used: http://physics.nist.gov/cuu/Uncertainty/typeb.html. The above calculated uncertainties apply to direct application of the Substitution method. The Substitution method is always used when the EUT comes closer than 3 dB to the limit.

6.2 Environmental Conditions During Testing:

The following environmental conditions were maintained during the course of testing:

- Ambient Temperature: 20-25° C
- Relative humidity: 40-60%

6.3 Dates of Testing:

05/26/2020 -- 05/29/2020

7 <u>Measurement Procedures</u>

7.1 Radiated Measurement

The radiated measurement is performed according to ANSI C63.10 (2013)

- The exploratory measurement is accomplished by running a matrix of 16 sweeps over the required frequency
 range with R&S Test-SW EMC32 for 4 positions of the turntable, two orthogonal positions of the EUT and
 both antenna polarizations. This procedure exceeds the requirement of the above standards to cover the 3
 orthogonal axis of the EUT. A max peak detector is utilized during the exploratory measurement. The TestSW creates an overall maximum trace for all 12 sweeps and saves the settings for each point of this trace.
 The maximum trace is part of the test report.
- The 10 highest emissions are selected with an automatic algorithm of EMC32 searching for peaks in the noise floor and ensuring that broadband signals are not selected multiple times.
- The maxima are then put through the final measurement and again maximized in a 90deg range of the turntable, fine search in frequency domain and height scan between 1m and 4m.
- The above procedure is repeated for all possible ways of power supply to EUT and for all supported modulations.
- In case there are no emissions above noise floor level only the maximum trace is reported as described above.
- The results are split up into up to 4 frequency ranges due to antenna bandwidth restrictions. A magnetic loop
 is used from 9 kHz to 30 MHz, a Biconilog antenna is used from 30 MHz to 1 GHz, and two different horn
 antennas are used to cover frequencies up to 40 GHz.

Radiated Emissions Test Setup below 30MHz Measurements

7.1.1 Sample Calculations for Field Strength Measurements

Field Strength is calculated from the Spectrum Analyzer/ Receiver readings, taking into account the following parameters:

- 1. Measured reading in $dB\mu V$
- 2. Cable Loss between the receiving antenna and SA in dB and
- 3. Antenna Factor in dB/m

All radiated measurement plots in this report are taken from a test SW that calculates the Field Strength based on the following equation:

FS (dB μ V/m) = Measured Value on SA (dB μ V) + Cable Loss (dB) + Antenna Factor (dB/m)

Example:

Frequency (MHz)	Measured SA (dBµV)	Cable Loss (dB)	Antenna Factor Correction (dB)	Field Strength Result (dBµV/m)
1000	80.5	3.5	14	98.0

8 <u>Test Result Data</u>

8.1 Radiated Transmitter Spurious Emissions and Restricted Bands

8.1.1 Measurement according to ANSI C63.10 (2013)

Spectrum Analyzer Settings:

- Frequency = 9 KHz 30 MHz
- RBW = 9 KHz
- Detector: Peak
- Frequency = 30 MHz 1 GHz
- Detector = Peak / Quasi-Peak
- RBW= 120 KHz (<1GHz)
- Frequency > 1 GHz
- Detector = Peak / Average
- RBW = 1 MHz
- Radiated spurious emissions shall be measured for the transmit frequencies, transmit power, and data rate for the lowest, middle and highest channel in each frequency band of operation and for the highest gain antenna for each antenna type, and using the appropriate parameters and test requirements.
- The highest (or worst-case) data rate shall be recorded for each measurement.
- For testing at distance other than the specified in the standard, the limit conversion is calculated by using 40 dB/decade extrapolation factor as follow: Conversion factor (CF) = 40 log (D/d) = 40 log (300m / 3m) = 80dB

8.1.2 Limits:

FCC §15.247

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

FCC §15.209 & RSS-Gen 8.9

• Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

Frequency of emission (MHz)	Field strength (µV/m)	Measurement Distance (m)	Field strength @ 3m (dBµV/m)
0.009–0.490	2400/F(kHz) /	300	-
0.490–1.705	24000/F(kHz) /	30	-
1.705–30.0	30 / (29.5)	30	-
30–88	100	3	40 dBµV/m
88–216	150	3	43.5 dBµV/m
216–960	200	3	46 dBµV/m
Above 960	500	3	54 dBµV/m

FCC §15.205 & RSS-Gen 8.10

• Except as shown in paragraph (d) of this section, only spurious emissions are permitted in any of the frequency bands listed below:

MHz	MHz	MHz	GHz
0.090-0.110	16.42-16.423	399.9-410	4.5-5.15
¹ 0.495-0.505	16.69475-16.69525	608-614	5.35-5.46
2.1735-2.1905	16.80425-16.80475	960-1240	7.25-7.75
4.125-4.128	25.5-25.67	1300-1427	8.025-8.5
4.17725-4.17775	37.5-38.25	1435-1626.5	9.0-9.2
4.20725-4.20775	73-74.6	1645.5-1646.5	9.3-9.5
6.215-6.218	74.8-75.2	1660-1710	10.6-12.7
6.26775-6.26825	108-121.94	1718.8-1722.2	13.25-13.4

8.2 AC Power Line Conducted Emissions

8.2.1 Measurement according to ANSI C63.10 (2013)

Analyzer Settings:

- RBW = 9 KHz (CISPR Bandwidth)
- Pre-scan Detector = Peak / Average for
- Final Measurements Detector = Quasi-Peak / Average

8.2.2 Limits: FCC 15.207 & RSS-Gen 8.8

(a) Except as shown in paragraphs (b) and (c) of this section of the CFR, for an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table (1), as measured using a 50 μ H/50 ohms line impedance stabilization network (LISN). Compliance with the provisions of this paragraph shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminal. The lower limit applies at the boundary between frequency ranges.

Frequency of omission (MHz)	Conducted limit (dBµV)					
	Quasi-peak	Average				
0.15–0.5	66 to 56*	56 to 46*				
0.5–5	56	46				
5–30	60	50				

*Decreases with the logarithm of the frequency.

8.2.3 Test conditions and setup:

Ambient Temperature (C)	EUT Set-Up #	EUT operating mode	Power line (L1, L2, L3, N)	Power Input
22	1	802.11g	Line & Neutral	110 V / 60 Hz
22	2	802.11g	Line & Neutral	110 V / 60 Hz

8.2.4 Measurement Result:

Plot #	Port	EUT Set-Up #	EUT operating mode	Scan Frequency	Limit	Result
1	AC Mains	1	802.11g	150 kHz – 30 MHz	See section 8.2.2	Pass
2	AC Mains	2	802.11g	150 kHz – 30 MHz	See section 8.2.2	Pass

8.2.5 Measurement Plots:

Plot # 1

Disclaimer: Any measurement data within 2dB from the limit line is conditional PASS/FAIL due to measurement uncertainty considerations.

Note: Equipment used meets the measurement uncertainty requirements as required per applicable standards for 95% confidence levels. Calibration due dates, unless defined specifically, falls on the last day of the month. Items indicated "N/A" for cal status either do not specifically require calibration or is internally characterized before use.
