To whom it may concern:

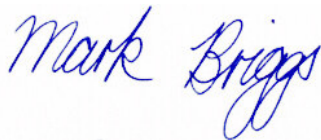

The enclosed documents constitute a formal submittal and application for a Class II Permissive change / Reassessment for a GSM module pursuant to Parts 22 and 24 of the FCC Rules (CFR 47).

The proposed change to the module is to use the module in portable rf exposure conditions in a specific host system, a hand-held personal data terminal. In addition the module will be co-located with a Bluetooth module and a WiFi module. No filings are necessary for the Bluetooth module, however a Class II permissive change has been filed (and approved) for the WiFi module to address use in the portable device and to address a new antenna type. As the scope of this application is to include the use of the GSM module in the host-specific configuration the documents address the measurement of eirp and erp against the relevant limits of Parts 22 and 24 and the rf exposure measurements required to demonstrate compliance with appropriate limits for portable exposure conditions (body-worn) when the module is co-located with the WiFi module (FCC ID: VSF22553) and Bluetooth module (FCC ID: VSF19979AR) in this host system. Proximity to the head is not addressed as the host does not support voice-calls.

Elliott Laboratories, as duly authorized agent prepared this submittal. A copy of the letter of our appointment as agent is included with the application.

If there are any questions or if further information is needed, please contact Elliott Laboratories for assistance.

Sincerely,

Mark Briggs
Staff Engineer
