		firmware is authenticated.
		The encryption key is known by the module manufacturer only.
4	Describe in detail the vanification must calc in	
4	Describe in detail the verification protocols in	The firmware binary is encrypted.
	place to ensure that installed software/firmware is	The process to flash a new firmware
	legitimate	is using a secret key to decrypt the
		firmware, only correct decrypted firmware is stored in non-volatile
	D 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	memory (see #3).
5	Describe in detail the verification protocols in	Standard open SSL encryption is
	place to ensure that installed software/firmware is	used (see #3).
	legitimate	
6	For a device that can be configured as a master	The device ensures the compliance
	and client (with active or passive scanning),	by checking the configured
	explain how the device ensures compliance for	parameter and operation values
	each mode? In particular if the device acts as	according to the regulatory domain
	master in some band of operation and client in	and country code in each band.
	another; how is compliance ensured in each band	
	of operation?	
	Software Security description – Third-P	T -
1	Explain if any third parties have the capability to	No, third parties don't have the
	operate a US sold device on any other regulatory	capability to access and change
	domain, frequencies, or in any manner that is in	radio parameters. US sold modules
	violation of the certification.	are factory configured to US.
2	Describe, if the device permits third-party	The embedded software is protected
	software or firmware installation, what	via the measures explained in the
	mechanisms are provided by the manufacturer to	previous section. Distributions of
	permit integration of such functions while	host operating software are
	ensuring that the RF parameters of the device	encrypted with a key.
	cannot be operated outside its authorization for	
	operation in the U.S. In the description include	
	what controls and/or agreements are in place with	
	providers of third-party functionality to ensure	
	the devices' underlying RF parameters are	
	unchanged and how the manufacturer verifies the	
	functionality.	
3	For Certified Transmitter modular devices,	The module is not available for sale
	describe how the module grantee ensures that	or installation outside of company
	host manufacturers fully comply with these	licensing agreements. Modules are
	software security requirements for U-NII devices.	always installed in host systems in a

	software loaded in the host, describe how the			responsible for loading authorized				
	drive	ers are	controlled and managed such that the	software.				
	mod	lular tr	ansmitter RF parameters are not					
	mod	dified o	outside the grant of authorization.					
	Software Security description – USER CONFIGURATION GUID							
1	Describe the user configurations permitted			There is no user configuration GUI.				
	thro	ugh th	e UI. If different levels of access are					
	pern	nitted 1	for professional installers, system					
	integ	grators	or end-users, describe the differences.					
	a. V	What p	parameters are viewable and	There is no user configuration GUI.				
	C	config	urable by different parties?					
	b. V	What p	parameters are accessible or modifiable	This device is not subject to				
	t	to the p	professional installer?	professional installation				
	i	i.	Are the parameters in some way					
			limited, so that the installers will not					
			enter parameters that exceed those					
			authorized?					
	i	ii.	What controls exist that the user					
			cannot operate the device outside its					
			authorization in the U.S.?					
	c. V	What c	configuration options are available to	The end user is not able to				
	t	the end	l-user?	configure any parameters related to				
				the devices radio				
	i	i.	Are the parameters in some way	The parameters can only be				
			limited, so that the installers will not	changed remotely within the limits				
			enter parameters that exceed those	of country code US.				
			authorized?					
	i	ii.	What controls exist that the user	The country code and regulatory				
			cannot operate the device outside its	domain control do limit all the				
	_		authorization in the U.S.?	parameters set				
			country code factory set? Can it be	The country code is factory set and				
	changed in the UI?		ed in the UI?	is never changed by UI.				
	_			The country code is factory set and				
	i	i.	If so, what controls exist to ensure	is never changed by UI				
			that the device can only operate					
			within its authorization in the U.S.?					

> INTUITIVE FIELD COMPUTING SOLUTIONS for rugged applications

	e. What are the default parameters when the	At each boot up the country code
	device is restarted?	and the antenna gain are read from
		the non-volatile memory, those
		values are configured during
		module production.
2	Can the radio be configured in bridge or mesh	Not supported
	mode? If yes, an attestation may be required.	
	Further information is available in KDB	
	Publication 905462 D02.	
3	For a device that can be configured as a master	No end user controls or user
	and client (with active or passive scanning), if	interface operation to change
	this is user configurable, describe what controls	master/client operation.
	exist, within the UI, to ensure compliance for	
	each mode. If the device acts as a master in some	
	bands and client in others, how is this configured	
	to ensure compliance?	
4	For a device that can be configured as different	The device does not support these
	types of access points, such as point-to-point or	modes/features.
	point-to-multipoint, and use different types of	
	antennas, describe what controls exist to ensure	
	compliance with applicable limits and the proper	
	antenna is used for each mode of operation. See	
	Section 15.407(a).	

Sincerely,

(Signed)
