SAR Exclusion Letter

According to KDB 447498 section 4.3.1, the 1-g SAR test exclusion thresholds at test separation distance ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] *·[$\sqrt{}$ f(GHz)] ≤ 3.0

The tune-up power is -1.3 dBm +/- 0dB, therefore the highest tune-up power is

-1.3 dBm (0.74 mW) @ 2478 MHz

When the minimum *test separation distance* is < 5 mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

So,

(0.74mW / 5mm) * (2.478GHz ^0.5)= 0.2

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] * [$\sqrt{}$ f(GHz)] = 0.2 < 3.0

Therefore, standalone SAR measurements are not required for both head and body.
