

**Radio Frequency Human Exposure Evaluation:**

The highest RF output power of the EUT at 906 MHz was measured 6.13 dBm which is less than 20mW.

Since maximum peak output power of the transmitter is  $<60/f$  (GHz) mW, i.e.  $4.10\text{mW} < 66.25 (=60/0.906)$  mW, hence the EUT is excluded from SAR evaluation according to FCC KDB publication 447498 D01: Mobile Portable RF Exposure.
