

Radio Frequency Human Exposure Evaluation:

The highest RF output power of the EUT at 906 MHz was measured 9.20 dBm which is less than 20mW.

Since maximum peak output power of the transmitter is $<60/f$ (GHz) mW, i.e. $8.32\text{mW} < 66.22 (=60/0.906)$ mW, hence the EUT is excluded from SAR evaluation according to FCC KDB publication 447498 D01: Mobile Portable RF Exposure.
