1. Introduction

Congratulations on becoming the owner of AG10W 4-port ADSL AP router. You will now be able to access the Internet using your high-speed ADSL connection. AG10W has the following major features.

1.1 Features

- Built-in ADSL modem for high speed Internet access
- Network Address Translation (NAT) and IP filtering functions to provide network sharing and firewall protection for your computers
- 4-port switch to build your own local network
- Easy configuration via a web browser
- IEEE 802.11g 54Mbps Access Point

This User's Manual will guide you to install and configure your AG10W.

1.2 System Requirements

Before installing your AG10W, make sure that you have the following:

- ADSL service up and running on your telephone line, with at least one public Internet address for your LAN
- One or more computers each containing an Ethernet 10Base-T/100Base-T network interface card (NIC) or wireless network adapter.

For system configuration, use the supplied web-based program.

Note: Make sure that your computer has a web browser such as Internet Explorer v5.0 or later, or Netscape v4.7 or later.

2. Installation

In addition to this document, your AG10W should arrive with the following:

- One standalone desktop AG10W
- One power adapter and power cord
- One Ethernet cable with RJ-45 connector
- One telephone cable with RJ-11 connector

Front Panel

The front panel LEDs indicate the status of the unit.

Label	Color	Function
PWR	Green	On: Power on Off: Power off
LAN1~4	Green	On: LAN link established and active Off: No LAN link Flashes during data transfer
DSL	Green	Flashes during the training mode. On: ADSL link established and active
Tx/Rx	Green	On: Router is active Flashes during data transfer through ADSL line
WLAN	Green	On: WLAN enabled Off: WLAN disabled Flashes during data transfer

Rear Panel

The connectors located at the rear panel have the following functions.

Interface	Function
<i>Botton</i>	Power switch on/off
<i>Power (SNG I- tec)</i>	Connects to the power adapter cable
<i>Reset</i>	Resets unit's configuration to factory default
<i>LAN1~4</i>	RJ-45 connector: Connects AG10W to your PC's Ethernet port, or to the uplink port on your LAN's hub
<i>ADSL</i>	RJ-11 connector: Connects AG10W to ADSL line

Figure 1. Rear view of AG10W

Connecting the Hardware

Connect AG10W to the phone jack, the power outlet, and your computer or network.

WARNING

Before you begin, turn the power off for all devices. These include your computer(s), your LAN hub/switch (if applicable), and AG10W.

Step 1. Connect the ADSL cable and optional telephone

Connect one end of the phone cable to the RJ-11 connector on the rear panel of AG10W. Connect the other end to the ADSL outlet provided by your service provider (normally MODEM port of the attached splitter).

Step 2. Connect the Ethernet cable

Connect one end of the Ethernet cable to the one of the four RJ-45 connectors on the rear panel of AG10W and connect the other end to your PC's network adaptor (NIC). If you are connecting a LAN to AG10W, attach one end of the Ethernet cable to a regular hub port and the other end to the LAN port on AG10W.

Step 3. Attach the power connector

Connect the AC power adapter to the power connector on AG10W and plug in the adapter to a wall outlet or power extension.

Step 4. Turn on AG10W and power up your systems

Press the Power switch on the back panel of AG10W to the ON (Low) position.

Turn on and boot up your computer(s) and any LAN devices such as hubs or switches.

Step 5. Configure AG10W through the WEB interface

Please refer to chapter 3.

Step 6. Save the configurations and Reboot

Save the changes you made on AG10W.

3. Configuration

3.1 Setup

- Connect AG10W and PC with an RJ-45 Ethernet cable.
- Turn on AG10W.
- The default IP address of AG10W is 192.168.1.1.

3.2 Establish The Connection

- Enter the IP address (default: 192.168.1.1) of AG10W in the address line of Web Browser
- A Dialogue Box will pop up to request the user to login. (Figure 1)

Figure 2. Authentication

- Please enter the management username/password into the fields then click on the **OK** button (default username/password is **admin/admin**).
- If the authentication is valid, the home page “Device Info - Summary” will be displayed on the screen. (**Figure 3**)

The screenshot displays the AG10W Home Page interface. On the left is a vertical navigation menu with the following items: **Device Info** (highlighted in red), Summary, WAN, Statistics, Route, ARP, Advanced Setup, Wireless, Diagnostics, and Management. The main content area is titled "Device Info" and contains the text: "This information reflects the current status of your DSL connection." Below this text is a table with the following data:

Line Rate - Upstream (Kbps):	800
Line Rate - Downstream (Kbps):	7680
Software Version:	2.14L.02DT.a0_23e3
LAN IP Address:	192.168.1.1
Default Gateway:	10.0.0.1
Primary DNS Server:	172.24.16.254
Secondary DNS Server:	172.24.16.254

Figure 3. AG10W Home Page

4. Quick Setup

The system administrator can configure AG10W remotely or locally via a Web Browser. Network configuration needs to be planned and decided before starting the configuration procedure.

Quick Setup allows system administrator to select the appropriate operation mode and configure the corresponding settings step by step to create a connection. The following five operation modes are supported:

- PPP over Ethernet (PPPoE)
- IP over ATM (IPoA)
- Bridging
- MAC Encapsulation Routing (MER)
- PPP over ATM (PPPoA)

4.1 PPP over Ethernet (PPPoE) Configuration

Click on “Quick Setup” in the left frame, and follow the steps below to create a PPP over Ethernet (PPPoE) connection.

4.1.1 ATM PVC Configuration

The screenshot shows a web interface for configuring an ATM PVC. On the left is a navigation menu with options: Device Info, Quick Setup (highlighted in red), Advanced Setup, Wireless, Diagnostics, and Management. The main content area is titled "Quick Setup" and contains the following text: "This Quick Setup will guide you through the steps necessary to configure your DSL Router." Below this is the "ATM PVC Configuration" section, which includes the instruction: "Select the check box below to enable DSL Auto-connect process." There is a checkbox labeled "DSL Auto-connect" which is currently unchecked. Further down, a note states: "The Virtual Path Identifier (VPI) and Virtual Channel Identifier (VCI) are needed for setting up the ATM PVC. Do not change VPI and VCI numbers unless your ISP instructs you otherwise." Below this note are two input fields: "VPI: [0-255]" with a value of "0" and "VCI: [32-65535]" with a value of "35". At the bottom right of the main content area is a "Next" button.

Figure 4. Quick Setup – ATM PVC Configuration

Enter the VPI/VCI values. Please contact you ISP for the information.

Click on “Next” to go to next step.

4.1.2 Connection Type and Encapsulation Mode

Device Info
Quick Setup
Advanced Setup
Wireless
Diagnostics
Management

Connection Type

Select the type of network protocol and encapsulation mode over the ATM PVC that your ISP has instructed you to use.

PPP over ATM (PPPoA)
 PPP over Ethernet (PPPoE)
 MAC Encapsulation Routing (MER)
 IP over ATM (IPoA)
 Bridging

Encapsulation Mode

LLC/SNAP-BRIDGING

Back Next

Figure 5. Quick Setup – Connection Type and Encapsulation Mode

Select “PPP over Ethernet (PPPoE)”, and the “Encapsulation Mode”. Please contact you ISP for the information.

Click on “Next” to go to next step.

4.1.3 PPP Username and Password

Figure 6. Quick Setup – PPP Username and Password

Enter “PPP Username”, “PPP Password”, and select “Authentication Method” (AUTO/PAP/CHAP). Please contact your ISP for the information.

The “Dial on demand” function, if checked, will tear down the PPP link automatically when there is no outgoing packet for the programmed period of time that is set below.

AG10W activates PPPoE connection automatically when user wants to access Internet and there is no active PPPoE connection.

The users are able to assign some specific ATM PVC(s) to run PPPoE, if AG10W has multiple ATM PVC connections.

The “PPP IP extension” is a special feature provided by some ISPs. Unless your service provider specifically requires this setup, do not select it.

Click on “Next” to go to next step.

4.1.4 IGMP Multicast, WAN service, and QoS

The screenshot shows a web-based configuration interface. On the left is a vertical navigation menu with the following items: Device Info, Quick Setup, Advanced Setup, Wireless, Diagnostics, and Management. The main content area is titled "Enable IGMP Multicast, and WAN Service". It contains three settings: "Enable IGMP Multicast" with an unchecked checkbox, "Enable WAN Service" with a checked checkbox, and "Service Name" with a text input field containing "pppoe_1_32". Below this is a section titled "Enable Quality Of Service" with a paragraph of explanatory text and an unchecked checkbox for "Enable Quality Of Service". At the bottom right of the main area are "Back" and "Next" buttons.

Figure 7. Quick Setup – IGMP Multicast, WAN service, and QoS

Check to Disable/Enable IGMP Multicast, WAN Service, and QoS.

Go to “Advanced Setup” > “Quality of Service” to assign priorities for the application. Click on “Next” to go to next step.

4.1.5 Device Setup

The screenshot shows a web-based configuration interface. On the left is a vertical navigation menu with the following items: Device Info, Quick Setup, Advanced Setup, Wireless, Diagnostics, and Management. The main content area is titled "Device Setup" and contains the instruction "Configure the DSL Router IP Address and Subnet Mask for LAN interface." It includes two input fields: "IP Address:" with the value "192.168.1.1" and "Subnet Mask:" with the value "255.255.255.0". Below these are two radio button options: "Disable DHCP Server" (unchecked) and "Enable DHCP Server" (checked). Under "Enable DHCP Server" are three input fields: "Start IP Address:" with "192.168.1.2", "End IP Address:" with "192.168.1.254", and "Leased Time (hour):" with "24". At the bottom of the main area is an unchecked checkbox for "Configure the second IP Address and Subnet Mask for LAN interface". At the bottom right are "Back" and "Next" buttons.

Figure 8. Quick Setup – Device Setup

Enter IP (LAN IP) and Subnet Mask.

Select to Disable/Enable DHCP Server, use DHCP Server Relay, and configure related settings for that mode.

AG10W will assign IP address, subnet mask, Default gateway IP address and DNS server IP address to host PCs which connect to its LAN.

Select “Configure the second IP Address and Subnet Mask for LAN interface” and configure if second IP Address is used.

Note: Network Address Translation function (NAT) is default enabled and is not showing on the page to prevent it from being disabled.

Click on “Next” to go to next step.

4.1.6 Wireless Setup

Device Info	Wireless -- Setup
Quick Setup	Enable Wireless <input checked="" type="checkbox"/>
Advanced Setup	Enter the wireless network name (also known as SSID).
Wireless	SSID: <input type="text" value="airgw"/>
Diagnostics	<input type="button" value="Back"/> <input type="button" value="Next"/>
Management	

Figure 9. Quick Setup - Wireless Setup

Check “Enable Wireless” to enable wireless radio; or uncheck to disable.

“SSID” is the network name shared among all devices in a wireless network. It is case-sensitive and must not exceed 32 alphanumeric characters.

Click on “Next” to go to next step.

4.1.7 WAN Setup – Summary

Device Info
Quick Setup
Advanced Setup
Wireless
Diagnostics
Management

WAN Setup - Summary

Make sure that the settings below match the settings provided by your ISP.

VPI / VCI:	1 / 32
Connection Type:	PPPoE
Service Name:	pppoe_1_32
Service Category:	UBR
IP Address:	Automatically Assigned
Service State:	Enabled
NAT:	Enabled
Firewall:	Enabled
IGMP Multicast:	Disabled
Quality Of Service:	Disabled

Click "Save/Reboot" to save these settings and reboot router. Click "Back" to make any modifications.
NOTE: The configuration process takes about 1 minute to complete and your DSL Router will reboot.

Figure 10. Quick Setup – WAN Setup – Summary

The last page displays a summary of previous settings. Make sure that the configurations match the settings provided by ISP, and then click on “Save/Reboot” button to complete the configuration procedure.

4.2 IP over ATM (IPoA) Configuration

Click on “Quick Setup” in the left frame, and follow the steps below to create an IP over ATM (Routed) connection.

4.2.1 ATM PVC Configuration

Figure 11. Quick Setup – ATM PVC Configuration

Enter the VPI/VCI values. Please contact your ISP for the information.

Click on “Next” to go to next step.

4.2.2 Connection Type

Figure 12. Quick Setup – Connection Type and Encapsulation Mode

Select “IP over ATM (IPoA)”, and the “Encapsulation Mode”. Please contact you ISP for the information.

Click on “Next” to go to next step.

4.2.3 WAN IP Settings

<p>Device Info Quick Setup Advanced Setup Wireless Diagnostics Management</p>	<p>WAN IP Settings</p> <p>Enter information provided to you by your ISP to configure the WAN IP settings.</p> <p>Notice: DHCP is not supported in IPoA mode. Changing the default gateway or the DNS effects the whole system. Configuring them with static values will disable the automatic assignment from other WAN connection.</p> <p>WAN IP Address: <input type="text" value="10.0.0.1"/></p> <p>WAN Subnet Mask: <input type="text" value="255.255.255.252"/></p> <p><input checked="" type="checkbox"/> Use the following default gateway:</p> <p><input checked="" type="checkbox"/> Use IP Address: <input type="text" value="10.0.0.2"/></p> <p><input type="checkbox"/> Use WAN Interface: <input type="text" value="ipoa_0_35/atm49"/></p> <p><input type="checkbox"/> Use the following DNS server addresses:</p> <p>Primary DNS server: <input type="text"/></p> <p>Secondary DNS server: <input type="text"/></p> <p style="text-align: right;"><input type="button" value="Back"/> <input type="button" value="Next"/></p>
---	---

Figure 13. Quick Setup– WAN IP Settings

WAN IP/Subnet Mask, default gateway, and DNS server settings. Please contact your ISP for the information.

Click on “Next” to go to next step.

4.2.4 NAT, IGMP Multicast, WAN Service, and QoS

<p>Device Info Quick Setup Advanced Setup Wireless Diagnostics Management</p>	<p>Network Address Translation Settings</p> <p>Network Address Translation (NAT) allows you to share one Wide Area Network (WAN) IP address for multiple computers on your Local Area Network (LAN).</p> <p>Enable NAT <input type="checkbox"/></p> <p>Enable Firewall <input type="checkbox"/></p> <p>Enable IGMP Multicast, and WAN Service</p> <p>Enable IGMP Multicast <input type="checkbox"/></p> <p>Enable WAN Service <input checked="" type="checkbox"/></p> <p>Service Name: <input type="text" value="ipoa_0_35"/></p> <p>Enable Quality Of Service</p> <p>Enabling QoS for a PVC improves performance for selected classes of applications. However, since QoS also consumes system resources, the number of PVCs will be reduced consequently. Use Advanced Setup/Quality of Service to assign priorities for the applications.</p> <p>Enable Quality Of Service <input type="checkbox"/></p> <p style="text-align: right;"><input type="button" value="Back"/> <input type="button" value="Next"/></p>
---	--

Figure 14. Quick Setup – IPoA – NAT, IGMP Multicast, WAN service, and QoS

Check to Enable/Disable NAT and Firewall functions.

Go to “Advanced Setup” > “Firewall” to assign filter rules.

Check to Enable/Disable IGMP Multicast, WAN Service, and QoS.

Go to “Advanced Setup” > “Quality of Service” to assign priorities for the application.

Click on “Next” to go to next step.

4.2.5 Device Setup

The screenshot shows the 'Device Setup' configuration page. On the left is a navigation menu with options: Device Info, Quick Setup, Advanced Setup, Wireless, Diagnostics, and Management. The main content area is titled 'Device Setup' and contains the following elements:

- Instruction: 'Configure the DSL Router IP Address and Subnet Mask for LAN interface.'
- IP Address: 192.168.1.1
- Subnet Mask: 255.255.255.0
- Radio buttons for DHCP Server:
 - Disable DHCP Server
 - Enable DHCP Server
- Start IP Address: 192.168.1.2
- End IP Address: 192.168.1.254
- Leased Time (hour): 24
- Checkbox: Configure the second IP Address and Subnet Mask for LAN interface
- Buttons: Back and Next

Figure 15. Quick Setup – Device Setup

Enter IP (LAN IP) Address and Subnet Mask to AG10W.

Select to Disable/Enable DHCP Server, use DHCP Server Relay, and configure related settings for that mode.

Select “Configure the second IP Address and Subnet Mask for LAN interface” and configure if second IP Address is used.

Click on “Next” to go to next step.

WAN Setup - Summary

Make sure that the settings below match the settings provided by your ISP.

VPI / VCI:	0 / 35
Connection Type:	IPoA
Service Name:	ipoa_0_35
Service Category:	UBR
IP Address:	10.0.0.1
Service State:	Enabled
NAT:	Disabled
Firewall:	Disabled
IGMP Multicast:	Disabled
Quality Of Service:	Disabled

Click "Save/Reboot" to save these settings and reboot router. Click "Back" to make any modifications.
NOTE: The configuration process takes about 1 minute to complete and your DSL Router will reboot.

Back Save/Reboot

Figure 17. Quick Setup – WAN Setup – Summary

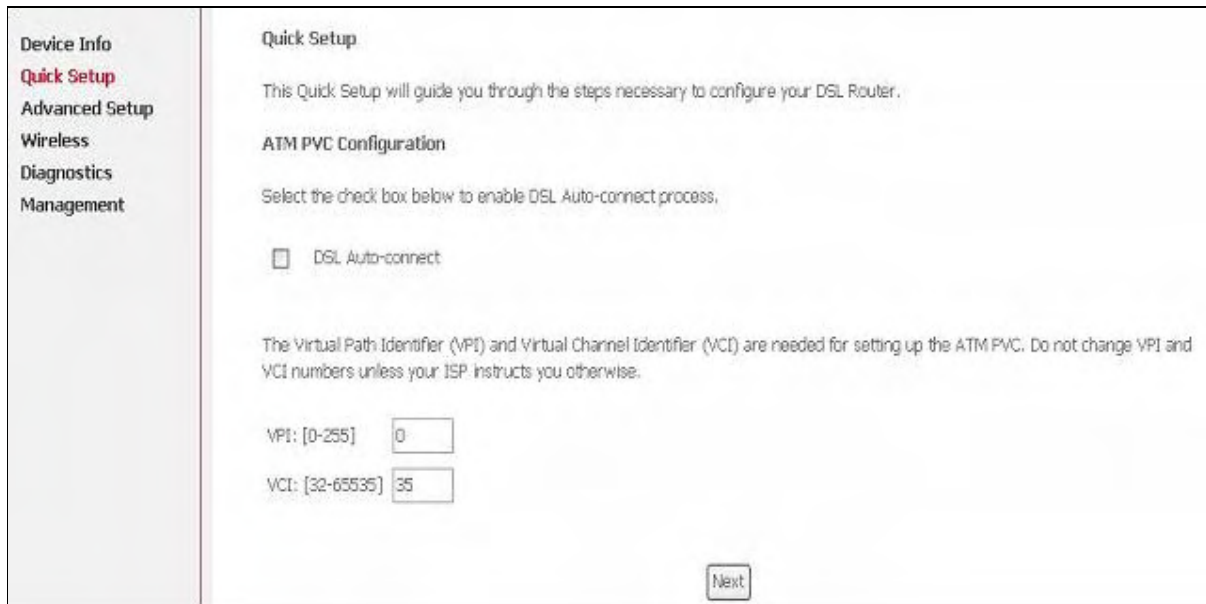

The last page gives a summary of previous steps. Make sure that the settings match the settings provided by ISP, and then click on “Save/Reboot” button to

complete the configuration procedure.

4.3 Bridge Configuration

Click on “Quick Setup” in the left frame, and follow the steps below to create a Bridging connection.

4.3.1 ATM PVC Configuration

The screenshot shows a web interface for configuring an ATM PVC. On the left is a navigation menu with the following items: Device Info, Quick Setup (highlighted in red), Advanced Setup, Wireless, Diagnostics, and Management. The main content area is titled "Quick Setup" and contains the following text: "This Quick Setup will guide you through the steps necessary to configure your DSL Router." Below this is the "ATM PVC Configuration" section, which says "Select the check box below to enable DSL Auto-connect process," followed by an unchecked checkbox labeled "DSL Auto-connect". A note states: "The Virtual Path Identifier (VPI) and Virtual Channel Identifier (VCI) are needed for setting up the ATM PVC. Do not change VPI and VCI numbers unless your ISP instructs you otherwise." There are two input fields: "VPI: [0-255]" with the value "0" and "VCI: [32-65535]" with the value "35". A "Next" button is located at the bottom right of the main content area.

5. Advanced Setup

Advanced Setup allows system administrator to configure the following topics:

- WAN
- LAN
- NAT
- Firewall
- Quality of Service
- Routing
- DNS
- DSL

5.1 WAN

The screenshot displays the 'Wide Area Network (WAN) Setup' page. On the left is a navigation menu with options: Device Info, Advanced Setup, WAN, LAN, NAT, Firewall, Quality of Service, Routing, DNS, DSL, Wireless, Diagnostics, and Management. The main content area is titled 'Wide Area Network (WAN) Setup' and includes instructions: 'Choose Add, Edit, or Remove to configure WAN interfaces. Choose Save/Reboot to apply the changes and reboot the system.' Below this is a table with the following data:

VPI/VCI	Category	Service Name	Protocol	State	Igmp	QoS	Remove	Edit
0/35	UBR	ipoa_0_35	PPPoE	Enabled	Disabled	Disabled	<input type="checkbox"/>	Edit

Below the table are three buttons: 'Add', 'Remove', and 'Save/Reboot'.

Figure 27. Advanced Setup – WAN

This page shows the current existing WAN interfaces in the system. User can choose Add, Edit, or Remove to configure WAN interfaces. For detail about Add and Edit procedure, please refer to **4. Quick Setup**.

5.2 LAN

Please refer to **4.1.5**.

5.3 NAT

Three functions are supported in NAT: Virtual Servers, Port Triggering, and DMZ Host.

5.3.1 Virtual Servers

The screenshot displays the 'NAT - Virtual Servers Setup' configuration page. On the left is a navigation menu with options like Device Info, Advanced Setup, WAN, LAN, NAT, Virtual Servers, Port Triggering, DMZ Host, Firewall, Quality of Service, Routing, DNS, DSL, Wireless, Diagnostics, and Management. The main content area includes a title 'NAT - Virtual Servers Setup', a descriptive paragraph about virtual servers, an 'Add' button, and a table of existing rules.

Server Name	External Port Start	External Port End	Protocol	Internal Port Start	Internal Port End	Server IP Address	Remove

Figure 28. Advanced Setup – NAT

Virtual Server allows you to direct incoming traffic from WAN side (identified by Protocol and External port) to the Internal server with private IP address on the LAN side. The Internal port is required only if the external port needs to be converted to a different port number used by the server on the LAN side. Maximum 32 entries can be configured.

Click on “Add” to enter configuration page to add your own rule(s). Some common used servers (Web, FTP, Mail, ...etc.) are pre-defined in AG10W. User can simply select the desired server from the pull-down menu and assign the IP address of the local PC.

To delete the configured rule(s), check the “Remove” box of the specific rule(s) and click on “Remove”.

5.3.2 Port Triggering

Some applications require that specific ports in the Router's firewall be opened for access by the remote parties. Port Trigger dynamically opens up the “Open Ports” in the firewall when an application on the LAN initiates a TCP/UDP connection to a remote party using the “Triggering Ports”. The Router allows the remote party from the WAN side to establish new connections back to the application on the LAN side using the “Open Ports”. A maximum 32 entries can be configured.

Figure 31. Advanced Setup – NAT – Add Port Triggering

5.3.3 DMZ Host

The DSL router will forward IP packets from the WAN that do not belong to any of the applications configured in the Virtual Servers table to the DMZ host computer.

Enter the computer's IP address and click “Apply” to activate the DMZ host.

Clear the IP address field and click “Apply” to deactivate the DMZ host.

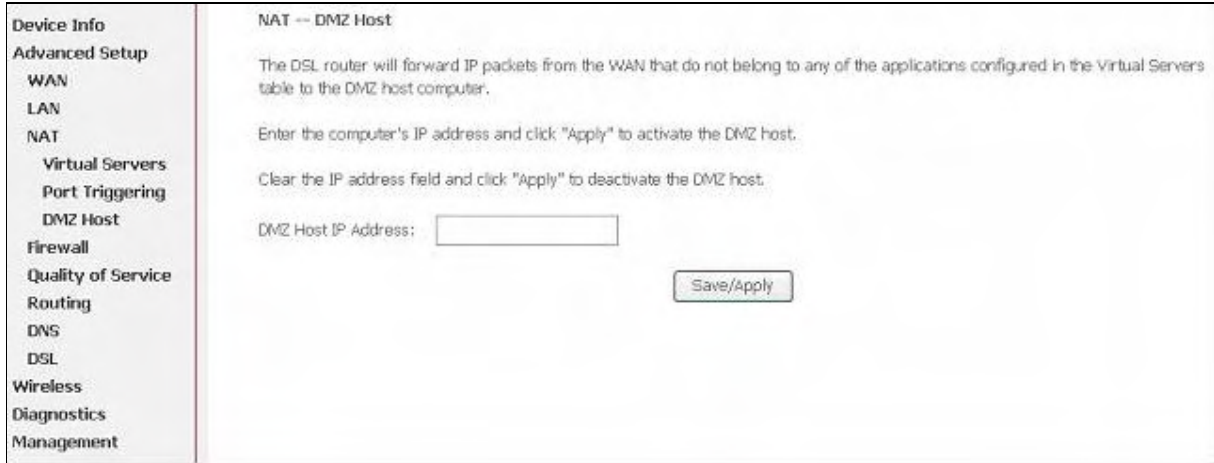

Figure 32. Advanced Setup – NAT – DMZ Host

5.4 Firewall

Two functions are supported in Firewall: Outgoing IP Filtering and MAC Filtering.

5.4.1 Firewall – Outgoing IP Filtering

By default, all outgoing IP traffic from LAN is allowed, but some IP traffic can be **BLOCKED** by setting up filters. Choose “Add” to configure outgoing IP filters. To remove, check the item and click “Remove”.

Figure 33. Advanced Setup – Firewall – Outgoing IP Filtering

The screen allows you to create a filter rule to identify outgoing IP traffic by

specifying a new filter name and at least one of the conditions below. All of the specified conditions in this filter rule must be satisfied for the rule to take effect. Click “Save/Apply” to save and activate the filter. **Figure 34** shows the configuration that prevents a local PC (IP address: 192.168.1.100) from surfing the Internet.

Figure 34. Advanced Setup – Firewall – Add new Outgoing IP Filter

5.4.2 Firewall – Incoming IP Filtering

By default, all incoming IP traffic from the WAN is blocked when the firewall is enabled. However, some IP traffic can be **ACCEPTED** by setting up filters.

Choose “Add” to configure incoming IP filters. To remove, check the item and click “Remove”.

Filter Name	VPI/VCI	Protocol	Source Address / Mask	Source Port	Dest. Address / Mask	Dest. Port	Remove
Filter1	0/33	TCP	172.20.1.129 / 255.255.0.0	1:500	192.168.1.50 / 255.255.255.0	1:500	<input type="checkbox"/>
Filter2	ALL	TCP	10.0.12.254			21	<input type="checkbox"/>

Figure 35. Advanced Setup – Firewall – Incoming IP Filter

The screen allows you to create a filter rule to identify incoming IP traffic by specifying a new filter name and at least one of the conditions below. All of the specified conditions in this filter rule must be satisfied for the rule to take effect. Click “Save/Apply” to save and activate the filter. **Figure 36** shows the configuration that allows a remote PC (IP address: 10.0.12.254) to access the local FTP server.

 Select at least one or multiple WAN interfaces displayed below to apply this rule.

Select All
 poa_0_33/atm49

Figure 36. Advanced Setup – Firewall – Add new Incoming IP Filter

5.4.3 Firewall – Parental Control

Parental Control allows user to create time of day restriction to a special LAN device connected to the Router. Click “Add” to configure restriction rules. To remove, check the item and click “Remove”. Up to 16 entries can be configured and used.

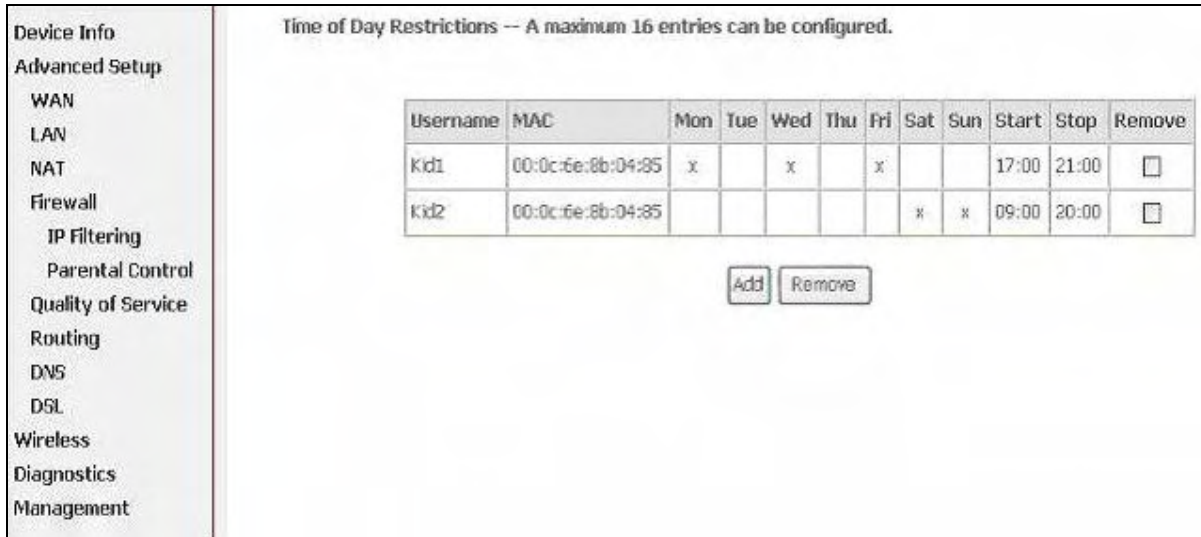

Figure 37. Advanced Setup – Firewall – Parental Control

The MAC Address of the “Browser” automatically displays the MAC address of the LAN device where the browser is running. To restrict other LAN device, click the “Other MAC Address” button and enter the MAC address of the other LAN device. To find out the MAC address of a Windows-based PC, go to command window and type “ipconfig/all”. Click “Save/Apply” to save and activate the restriction rule.

Figure 38. Advanced Setup – Firewall – Add new Parental Control

5.5 Quality of Service

Quality of Service (QoS) (including IP Precedence, IP TOS and IEEE 802.1P) refers to a combination of mechanisms that jointly provide a specific quality level to application traffic crossing a network or multiple, disparate networks.

The screenshot shows the 'Quality of Service Setup' page. On the left is a navigation menu with options: Device Info, Advanced Setup, WAN, LAN, NAT, Firewall, Quality of Service, Routing, DNS, DSL, Wireless, Diagnostics, and Management. The main area is titled 'Quality of Service Setup' and contains the instruction 'Choose Add or Remove to configure network traffic classes.' Below this is a table with the following data:

Class Name	Priority	IP Precedence	IP Type of Service	802.1P	Protocol	Source Address / Mask	Source Port	Dest. Address / Mask	Dest. Port	Remove
Class_A	High	1	Maximize Throughput		TCP/UDP	192.168.1.100				<input type="checkbox"/>
Class_B	Medium		Maximize Throughput	1						<input type="checkbox"/>
Class_C	High	1	Maximize Throughput		TCP/UDP	192.168.1.110				<input type="checkbox"/>

At the bottom of the table area are two buttons: 'Add' and 'Remove'.

Figure 39. Advanced Setup – Quality of Service

Click on “Add” to create a class to identify the IP traffic by specifying at least one condition below. If multiple conditions are specified, all of them take effect.

The screenshot shows the configuration form for adding a new QoS rule. It includes the following fields:

- Priority: High (dropdown menu)
- IP Precedence: 1 (dropdown menu)
- IP Type Of Service: Maximize Throughput (dropdown menu)

Below these is the section 'Specify Traffic Conditions for the class' with the instruction 'Enter the following conditions either for IP layer or for the IEEE 802.1p priority.' The fields in this section are:

- Protocol: TCP/UDP (dropdown menu)
- Source IP Address: 192.168.1.110 (text input)
- Source Subnet Mask: (text input)
- Source Port (port or port:port): (text input)
- Destination IP Address: (text input)
- Destination Subnet Mask: (text input)
- Destination Port (port or port:port): (text input)

Figure 40. Advanced Setup – Add new QoS rule

5.6 Routing

There are three routing information related settings.

5.6.1 Routing – Default Gateway

If “Enable Automatic Assigned Default Gateway” checkbox is selected, AG10W will accept the first received default gateway assignment from one of the PPPoA, PPPoE or MER/DHCP enabled PVC(s). If the checkbox is not selected, enter the static default gateway AND/OR a WAN interface. Click “Apply” button to save it.

NOTE: If changing the “Enable Automatic Assigned Default Gateway” from unselected to selected, You must reboot AG10W to activate the automatic assigned default gateway.

	<input checked="" type="checkbox"/> Use Interface	<input type="text" value="LAN/br0"/>
	<input type="button" value="Save/Apply"/>	

Figure 43. Advanced Setup – Routing – Add new Static Route

5.6.3 Routing – RIP

The Routing Information Protocol (RIP) is designed for exchanging routing information within a small to medium-size Internetwork.

Routing -- RIP Configuration

To activate RIP for the device, select the 'Enabled' radio button for Global RIP Mode. To configure an individual interface, select the desired RIP version and operation, followed by placing a check in the 'Enabled' checkbox for the interface. Click the 'Save/Apply' button to save the configuration, and to start or stop RIP based on the Global RIP mode selected.

Global RIP Mode Disabled Enabled

Interface	VPI/VCI	Version	Operation	Enabled
br0	(LAN)	2	Active	<input type="checkbox"/>
atm49	0/33	2	Passive	<input type="checkbox"/>

Save/Apply

Figure 44. Advanced Setup – Routing – RIP

To configure an individual interface, select the desired RIP version and operation:

RIP Version 1: Class-based IP network.

RIP Version 2: Classless IP network.

Operation Active: Broadcast and listen to other RIP enabled devices.

Operation Passive: Listen only.

Placing a check in the “Enabled” checkbox for the interface to complete the configuration. Click the “Apply” button to save the configuration. To start/stop RIP for AG10W, select the “Enabled/Disabled” radio button for Global RIP Mode.

5.7 DNS

5.7.1 DNS Server

Device Info Advanced Setup WAN LAN NAT Firewall Quality of Service Routing DNS DNS Server Dynamic DNS DSL Wireless Diagnostics Management	<h3>DNS Server Configuration</h3> <p>If 'Enable Automatic Assigned DNS' checkbox is selected, this router will accept the first received DNS assignment from one of the PPPoA, PPPoE or MER/DHCP enabled PVC(s) during the connection establishment. You must reboot the router to make the new configuration effective.</p> <p><input type="checkbox"/> Enable Automatic Assigned DNS</p> <p>Primary DNS server: <input type="text"/></p> <p>Secondary DNS server: <input type="text"/></p> <p style="text-align: right;"><input type="button" value="Save"/></p>
---	--

Figure 45. Advanced Setup – DNS Server

If “Enable Automatic Assigned DNS” checkbox is selected, AG10W will accept the first received DNS assignment from one of the PPPoA, PPPoE or MER/DHCP enabled PVC(s) during the connection establishment. If the checkbox is not selected, enter the primary and optional secondary DNS server IP addresses. Click “Apply” button to save it.

NOTE: If changing from unselected “Enable Automatic Assigned DNS” to selected, you must reboot AG10W to get the automatic assigned DNS addresses.

5.7.2 Dynamic DNS

The Dynamic DNS service allows you to alias a dynamic IP address to a static hostname in any of the domains. This function allows your AG10W to be more easily accessible from various locations of the Internet.

Choose “Add” to configure Dynamic DNS.

Before you proceed, please visit one of these two website to apply your own Dynamic DNS service: www.dnads.org or www.tzo.com.

To remove, check the item and click “Remove”

Dynamic DNS

The Dynamic DNS service allows you to alias a dynamic IP address to a static hostname in any of the many domains, allowing your DSL router to be more easily accessed from various locations on the Internet.

Choose Add or Remove to configure Dynamic DNS.

Hostname	Username	Service	Interface	Remove
ADSL	router	dyndns	ppp33	<input type="checkbox"/>

Figure 46. Advanced Setup – DNS – Dynamic DNS

Select your Dynamic DNS service provider from ‘D-DNS provider’, and enter your registration information. Click “Save/Apply” to save the configuration.

Add dynamic DDNS

This page allows you to add a Dynamic DNS address from DynDNS.org or TZO.

Figure 47. Advanced Setup – DNS – Add Dynamic DNS

6. Wireless Setup

6.1 Basic

This page allows you to configure basic features of the wireless LAN interface. You can enable or disable the wireless LAN interface, hide the network from active scans (no broadcasting of your network name), set the wireless network name (also known as SSID, default: **airgw**), and restrict the channels based on nation's requirements. Click "Save/Apply" to save the configurations.

The screenshot shows the 'Wireless -- Basic' configuration page. On the left is a sidebar with the following menu items: Device Info, Advanced Setup, Wireless (highlighted), Basic, Security, MAC Filter, Wireless Bridge, Advanced, Diagnostics, and Management. The main content area has the title 'Wireless -- Basic' and a paragraph: 'This page allows you to configure basic features of the wireless LAN interface. You can enable or disable the wireless LAN interface, hide the network from active scans, set the wireless network name (also known as SSID) and restrict the channel set based on country requirements. Click "Apply" to configure the basic wireless options.' Below this are four configuration options: 'Enable Wireless' (checked checkbox), 'Hide Access Point' (unchecked checkbox), 'SSID: airgw' (text input field), and 'Country: Worldwide' (dropdown menu). A 'Save/Apply' button is at the bottom right. A note on the right side states: 'Note to US model owner: To comply with US FCC regulation, the country selection function has been completely removed from all US models. The above function is for non-US models only.'

Figure 48. Wireless Setup – Basic

6.2 Security

Four types of wireless security are provided: Shared (WEP), 802.1x, WPA/WPA2, and WPA/WPA2-PSK.

6.2.1 WEP

WEP (**W**ired **E**quivalent **P**rivacy) provides security by encrypting data over radio waves when data is transmitted from one end point to another. WEP is the weakest security method but the easiest one to configure. To enable WEP, select the following items step by step:

Network Authentication: Shared

Data Encryption: Enabled

Encryption Strength: 128-bit (recommended for better security) or 64-bit

Click "Set Encryption Key" to enter your WEP keys.

This page allows you to configure security features of the wireless LAN interface. You can set the network authentication method, select data encryption, specify whether a network key is required to authenticate to this wireless network and specify the encryption strength. Click "Apply" to configure the wireless security options.

Network Authentication:

WEP Encryption:

Encryption Strength:

Figure 49. Wireless Setup – Security – WEP

Four keys for both encryption strengths can be stored here. Enter 13 ASCII characters or 26 hexadecimal digits for 128-bit encryption keys. Enter 5 ASCII characters or 10 hexadecimal digits for 64-bit encryption keys. Select which key (1 ~ 4) to use from “Current Network Key”. Click “Save/Apply” to save the configuration.

Wireless Settings -- Encryption Keys

Enter 13 ASCII characters or 26 hexadecimal digits for 128-bit encryption keys.

Network Key 1:

Network Key 2:

Network Key 3:

Network Key 4:

Current Network Key:

Figure 50. Wireless Setup – Security – WEP

6.2.2 802.1X

802.1X addresses the WEP weakness by adding user authentication, via RADIUS server. So you need to have your RADIUS server up and running before using 802.1X. To enable 802.1X, select “802.1X” in “Network Authentication”. Enter your RADIUS server IP address, port number (default: **1812**), and key. Follow section 6.2.1 to configure your WEP key and select “Save/Apply” to save your configuration.

This page allows you to configure security features of the wireless LAN interface. You can set the network authentication method, selecting data encryption, specify whether a network key is required to authenticate to this wireless network and specify the encryption strength. Click "Apply" to configure the wireless security options.

Network Authentication:

RADIUS Server IP Address:

RADIUS Port:

RADIUS Key:

WEP Encryption:

Encryption Strength:

Figure 51. Wireless Setup – Security – 802.1X

6.2.3 WPA/WPA2

WPA (Wi-Fi Protected Access) is the strongest wireless security provided by AG10W. Like 802.1X, WPA must co-work with RADIUS server as well. To enable WPA, select the following items step by step:

Network Authentication: WPA/WPA2

WPA Group Rekey Interval: in seconds. Default: **0** (no re-keying).

RADIUS Server IP Address/Port/Key: must match your RADIUS server.

WPA Encryption: TKIP (select AES or TKIP+AES for WPA2).

Check your supplicant capability before you decide which one to use.

Device Info Advanced Setup Wireless Basic Security MAC Filter Wireless Bridge Advanced Station Info Diagnostics Management	<p>Wireless -- Security</p> <p>This page allows you to configure security features of the wireless LAN interface. --	---

Figure 53. Wireless Setup – Security – WPA-PSK

6.3 MAC Filter

Wireless MAC filter allows you to implement access control based on device's MAC address.

When you select "Allow" in "MAC Restrict Mode", only data from devices with matching MAC addresses in filter table can access AG10W. If you select "Deny" in "MAC Restrict Mode", every device can access AG10W except those which have matching MAC addresses in the filter table. To add filter entry, click on "Add" and enter the MAC address of AG10W. Click "Save/Apply" to save the configuration. To "delete" the entry, select the entry and click "Remove".

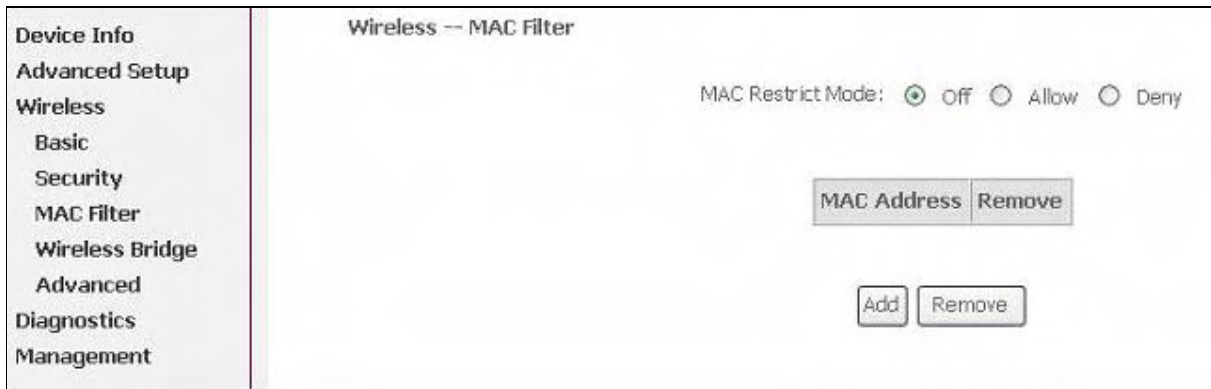

Figure 54. Wireless Setup – MAC Filter

6.4 Wireless Bridge

Wireless Bridge (also known as Wireless Distribution System) can bridge data between two APs, which is particularly useful while wired cabling is not available.

Note: only APs in same channel can be bridged.

AP Mode: Wireless Bridge- listens and answers other APs only

Access Point- Wireless Bridge also with AP functionality

Bridge Restrict: Disabled- any AP will be granted access

Enabled- only selected APs (Max. 4) with specified MAC address will be granted access

Enabled (Scan)- as above, but AG10W will scan available AP for you to select.

Refresh: re-scan the available AP

Save/Apply: save the configuration

Device Info Advanced Setup Wireless Basic Security MAC Filter Wireless Bridge Advanced Diagnostics Management	<p>This page allows you to configure wireless bridge features of the wireless LAN interface. You can select Wireless Bridge (also known as Wireless Distribution System) to disable access point functionality. Selecting Access Point enables access point functionality. Wireless bridge functionality will still be available and wireless stations will be able to associate to the AP. Select Disabled in Bridge Restrict which disables wireless bridge restriction. Any wireless bridge will be granted access. Selecting Enabled or Enabled(Scan) enables wireless bridge restriction. Only those bridges selected in Remote Bridges will be granted access. Click "Refresh" to update the remote bridges. Wait for few seconds to update. Click "Save/Apply" to configure the wireless bridge options.</p> <p>AP Mode: <input type="text" value="Access Point"/></p> <p>Bridge Restrict: <input type="text" value="Enabled(Scan)"/></p> <p>Remote Bridges MAC Address:</p> <table border="1"> <thead> <tr> <th colspan="2">BSSID</th> </tr> </thead> <tbody> <tr> <td><input type="checkbox"/></td> <td>00:03:C9:34:28:B4</td> </tr> <tr> <td><input type="checkbox"/></td> <td>00:10:C6:1C:D8:B3</td> </tr> <tr> <td><input type="checkbox"/></td> <td>00:03:C9:2E:78:E1</td> </tr> </tbody> </table> <p style="text-align: right;"> <input type="button" value="Refresh"/> <input type="button" value="Save/Apply"/> </p>	BSSID		<input type="checkbox"/>	00:03:C9:34:28:B4	<input type="checkbox"/>	00:10:C6:1C:D8:B3	<input type="checkbox"/>	00:03:C9:2E:78:E1

Figure 55. Wireless Setup – Wireless Bridge

6.5 Advanced

In most cases, AG10W work well with wireless default settings. Modification is not recommended unless you are very familiar with these parameters.

Channel: Select the appropriate channel from the provided list to correspond with your network settings. All devices in your wireless network must use the same channel in order to function correctly. Default: **7**.

Rate: The range is from 1 to 54Mbps. The data transmission rate should be set according to the speed of your wireless network. You can set one transmission speed, or keep the default setting “Auto” to have the router automatically detect the fastest possible data rate.

Basic Rate Set: Select the basic rate that wireless clients must support.

Fragmentation: This value should remain at its default setting of **2346**. The range is 256-2346 bytes. This value specifies the maximum packet size before data is fragmented into multiple packets. If you experience a high packet error rate, you may slightly lower the Fragmentation value. Setting the Fragmentation too low may result in poor network performance. Only slight adjustment of this value is recommended.

RTS Threshold: This value should remain at its default setting of **2347**. The range is 0-2347 bytes. Should you encounter inconsistent data flow, only

slight adjustment of this value is recommended. If a network packet is smaller than the preset RTS threshold size, the RTS/CTS mechanism will not be enabled. AG10W sends Request to Send (RTS) frames to a particular receiving station and negotiates the transmission of a data frame. After receiving an RTS, the wireless station responds with a Clear to Send (CTS) frame to acknowledge the right to begin transmission.

DTIM Interval: This value, between 1 and 255 milliseconds, indicates the interval of the Delivery Traffic Indication Message (DTIM). A DTIM interval is a countdown field which is used to inform clients about the next window for listening to broadcast and multicast messages. When AG10W has buffered broadcast or multicast for associated clients, it sends the next DTIM with a DTIM Interval value. Its clients hear the beacons and awaken to receive the broadcast and multicast message. Default: **3**.

Beacon Interval: Enter a value between 1 and 65535 milliseconds. The Beacon Interval indicates the frequency interval of the beacon. A beacon is a packet broadcast by AG10W to synchronize the wireless network. Default: **100**.

54g Mode: There are 3 selections. Select **54g Auto** for the widest compatibility. Select **54g Performance** for the fastest performance. Select **54g LRS** if you are experiencing difficulty with legacy 802.11b equipment.

54g protection: In **Auto** mode, AG10W will use RTS/CTS to improve 802.11g performance in mixed 802.11g/802.11b network. Turn **off** protection to maximize 802.11g throughput under most conditions.

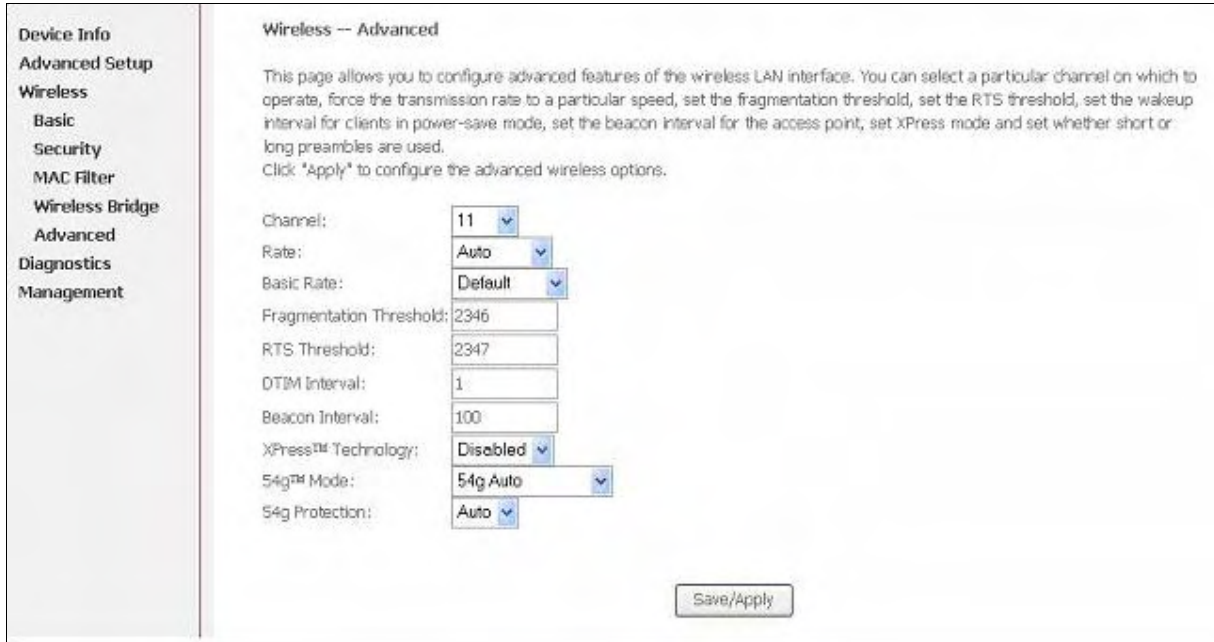

Figure 56. Wireless Setup – Advanced

6.6 Station Info

This page shows authenticated wireless stations and their status.

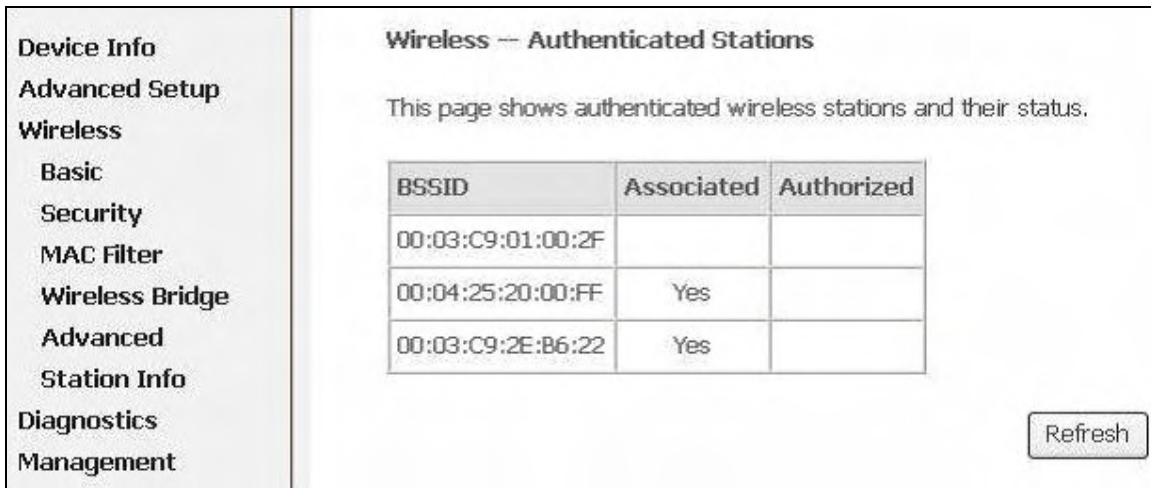

Figure 57. Wireless Setup – Station Info

7. Diagnostics

This page allows users to test the Ethernet port connection, DSL port connection, and connection to the Internet Service Provider. If a test displays a fail status, click “Return Diagnostic Tests” at the bottom of the page to make sure the fail status is consistent. If the test continues to show fail, click “Help” to go to the troubleshooting procedures.

The screenshot shows a web interface for diagnostics. On the left is a navigation menu with the following items: Device Info, Advanced Setup, Wireless, Diagnostics (highlighted), and Management. The main content area is titled "Test the connection to your local network" and contains three rows of test results:

Test	Status	Action
Test your Ethernet Connection:	PASS	Help
Test your USB Connection:	DOWN	Help
Test your Wireless Connection:	PASS	Help

Below this is a section titled "Test the connection to your DSL service provider" with three rows:

Test ADSL Synchronization:	PASS	Help
Test ATM OAM F5 segment ping:	PASS	Help
Test ATM OAM F5 end-to-end ping:	PASS	Help

Next is a section titled "Test the connection to your Internet service provider" with five rows:

Test PPP server connection:	FAIL	Help
Test authentication with ISP:	N/A	Help
Test the assigned IP address:	N/A	Help
Ping default gateway:	N/A	Help
Ping primary Domain Name Server:	N/A	Help

At the bottom of the main content area are two buttons: "Rerun Diagnostic Tests" and "Rerun Diagnostic Tests With OAM F4".

Figure 58. Diagnostics

8. Management

8.1 Settings

System Administrator can do the AG10W settings backup, update, and restore default here. The settings can be saved from AG10W to PC. The saved setting file can also be loaded from PC to AG10W. These 2 functions can help the system administrator to manage large amount of AG10W efficiently. Restore Default would set the AG10W with the factory default configuration.

To backup the current configurations, click on “Backup Settings”, and a File Download window will pop up.

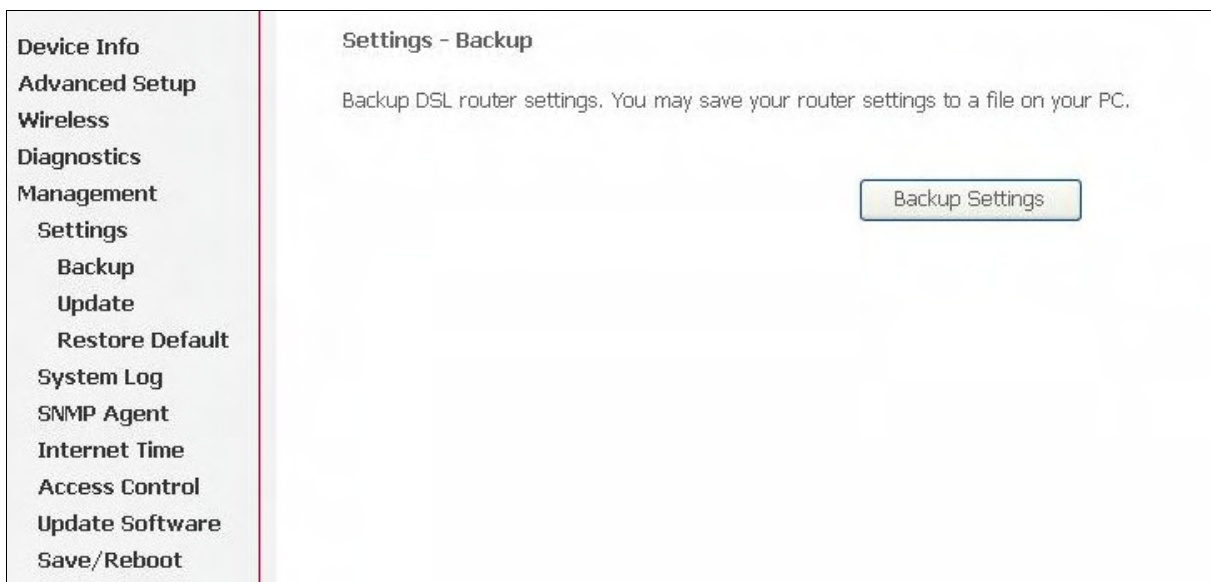

Figure 59. Management – Settings – Backup Settings

Click on “Save” and select the destination of the backup file (backupsettings.cfg) in your local PC. Click on “Save” again to save your backup file.

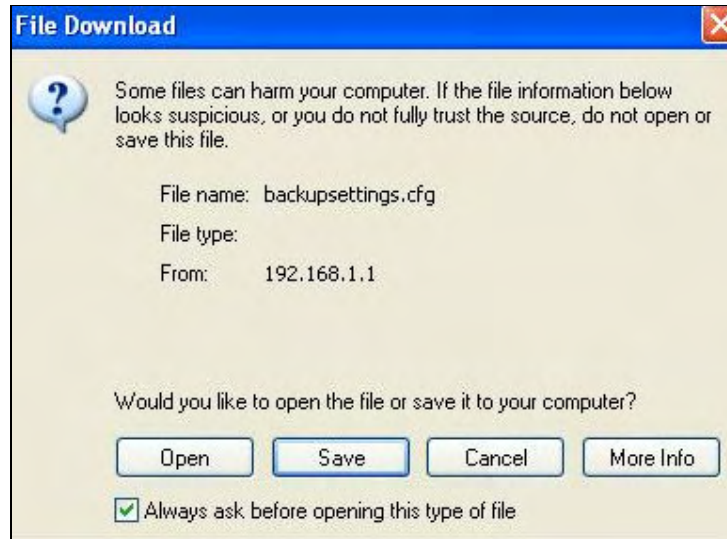

Figure 60. Management – Settings – File Download

To update the configuration, click on “Browse” and a Choose-File-window will pop up. Locate the saved file and click on “Update Settings”. AG10W will modify its settings based on the update file.

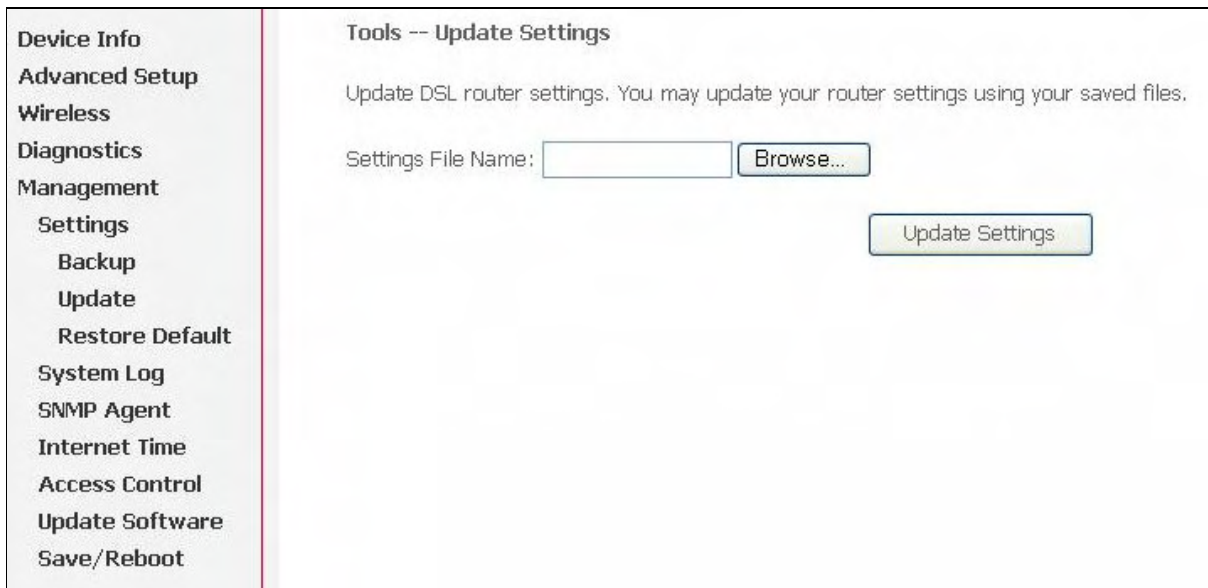

Figure 61. Management – Settings – Update

To restore the router to its factory default settings, click on “Restore Default Settings”.

Figure 62. Management – Settings – Restore Default

8.2 System Log

This allows System Administrator to view the System Log and configure the System Log options.

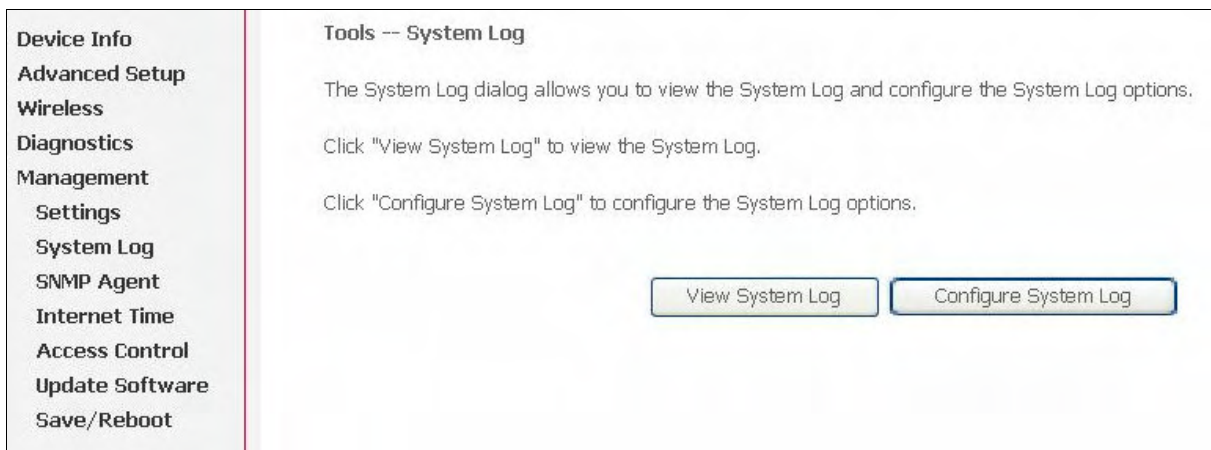

Figure 63. Management – System Log

Click on “Configure System Log” to configure the log options. There are 8 events of “Log Level” and “Display Level”: **Emergency, Alert, Critical, Error, Warning, Notice, Informational, and Debugging**. If the log mode is enabled, the system will begin to log all the selected events. For the Log Level, all events above or equal to the selected level will be logged. For the Display Level, all logged events above or equal to the selected level will be displayed.

If the selected mode is “Remote” or “Both”, events will be sent to the specified IP address and UDP port of the remote syslog server. If the selected mode is “Local” or “Both”, events will be recorded in the local memory. Click on “Save/Apply” to save the configuration.

The screenshot shows the 'System Log - Configuration' page. On the left is a navigation menu with items: Device Info, Advanced Setup, Wireless, Diagnostics, Management, Settings, System Log, SNMP Agent, Internet Time, Access Control, Update Software, and Save/Reboot. The main content area has the title 'System Log - Configuration' and a descriptive paragraph: 'If the log mode is enabled, the system will begin to log all the selected events. For the Log Level, all events above or equal to the selected level will be logged. For the Display Level, all logged events above or equal to the selected level will be displayed. If the selected mode is 'Remote' or 'Both,' events will be sent to the specified IP address and UDP port of the remote syslog server. If the selected mode is 'Local' or 'Both,' events will be recorded in the local memory.' Below this is the instruction: 'Select the desired values and click 'Save/Apply' to configure the system log options.' The configuration fields are: 'Log:' with radio buttons for 'Disable' and 'Enable' (selected); 'Log Level:' with a dropdown menu set to 'Debugging'; 'Display Level:' with a dropdown menu set to 'Error'; 'Mode:' with a dropdown menu set to 'Both'; 'Server IP Address:' with a text input field containing '0.0.0.0'; and 'Server UDP Port:' with a text input field containing '514'. A 'Save/Apply' button is located at the bottom right.

Figure 64. Management – System Log Configuration

Click on “View System Log” to see the router log based on your configuration.

8.3 SNMP Agent

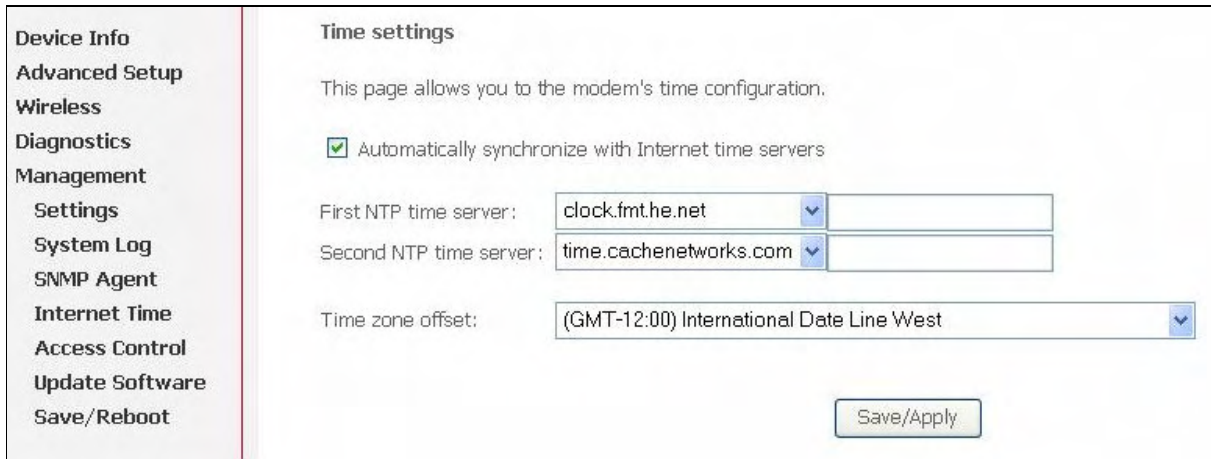

System Administrator could enable or disable the embedded SNMP Agent here. SNMP Agent would allow a management application to retrieve AG10W statistics and status.

The screenshot shows the 'SNMP - Configuration' page. On the left is a navigation menu with items: Device Info, Advanced Setup, Wireless, Diagnostics, Management, Settings, System Log, SNMP Agent, Internet Time, Access Control, Update Software, and Save/Reboot. The main content area has the title 'SNMP - Configuration' and a descriptive paragraph: 'Simple Network Management Protocol (SNMP) allows a management application to retrieve statistics and status from the SNMP agent in this device.' Below this is the instruction: 'Select the desired values and click "Apply" to configure the SNMP options.' The configuration fields are: 'SNMP Agent:' with radio buttons for 'Disable' and 'Enable' (selected); 'Read Community:' with a text input field containing 'public'; 'Set Community:' with a text input field containing 'private'; 'System Name:' with a text input field containing 'APRouter'; 'System Location:' with a text input field containing 'unknown'; 'System Contact:' with a text input field containing 'unknown'; and 'Trap Manager IP:' with a text input field containing '0.0.0.0'. A 'Save/Apply' button is located at the bottom right.

Figure 65. Management – SNMP Agent

8.4 Internet Time

AG10W can synchronize its internal time with Internet time server when available. To enable this function, check “Automatically synchronize with Internet time servers”. Select First and Second NTP time server from the pull down menu. Or select “Other” and define your preferred NTP server. Choose the time zone from “Time zone offset”. Click on “Save/Apply” to save the configuration.

The screenshot shows the 'Internet Time' configuration page. On the left is a navigation menu with the following items: Device Info, Advanced Setup, Wireless, Diagnostics, Management, Settings, System Log, SNMP Agent, Internet Time, Access Control, Update Software, and Save/Reboot. The 'Internet Time' option is highlighted. The main content area is titled 'Time settings' and contains the following elements:

- A heading: 'Time settings'
- A descriptive text: 'This page allows you to the modem's time configuration.'
- A checked checkbox: 'Automatically synchronize with Internet time servers'
- A 'First NTP time server:' field with a dropdown menu showing 'clock.fmt.he.net' and an empty text input field.
- A 'Second NTP time server:' field with a dropdown menu showing 'time.cachenetworks.com' and an empty text input field.
- A 'Time zone offset:' field with a dropdown menu showing '(GMT-12:00) International Date Line West'.
- A 'Save/Apply' button at the bottom right.

Figure 66. Management – Internet Time

8.5 Access Control

AG10W browser management tool is protected by three categories: Services, IP addresses, and Passwords. All three must be matched, if configured, to gain access to the management tool.

All services are enabled from LAN side and disabled from WAN side by default.

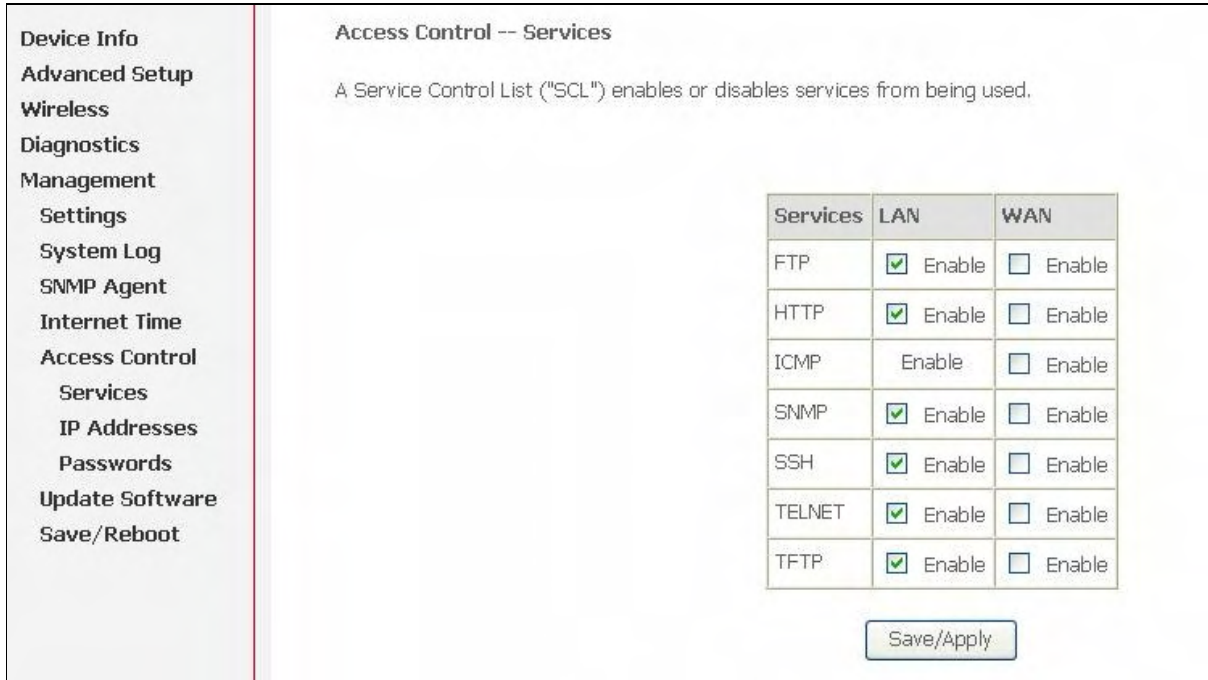

Figure 67. Management – Access Control - Service

The IP Address Access Control mode, if enabled, permits access to local management services from IP addresses contained in the Access Control List. If the Access Control mode is disabled, the system will not validate IP addresses for incoming packets. The services are the system applications listed in the Service Control List.

Click “Add” to add an IP address to the Access Control List. To remove, mark the Remove option of the specified IP address, then click “Remove” to remove the IP address from the Access Control List. Up to 16 hosts can be configured here.

Figure 68. Management – Access Control – IP Addresses

Access to your router is controlled through three user accounts: **admin**, **support**, and **user**.

admin: has unrestricted access to change and view AG10W configuration.

support: is used to allow an ISP technician to access AG10W for maintenance and to run diagnostics.

user: can access AG10W to view configuration settings and statistics, as well as, update AG10W software.

Use the fields below to enter up to 16 characters and click “Save/Apply” to change or create passwords.

The screenshot shows the 'Access Control -- Passwords' configuration page. On the left is a navigation menu with items: Device Info, Advanced Setup, Wireless, Diagnostics, Management, Settings, System Log, SNMP Agent, Internet Time, Access Control, Services, IP Addresses, Passwords, Update Software, and Save/Reboot. The main content area is titled 'Access Control -- Passwords' and contains the following text:

Access to your DSL router is controlled through three user accounts: admin, support, and user.

The user name "admin" has unrestricted access to change and view configuration of your DSL Router.

The user name "support" is used to allow an ISP technician to access your DSL Router for maintenance and to run diagnostics.

The user name "user" can access the DSL Router, view configuration settings and statistics, as well as, update the router's software.

Use the fields below to enter up to 16 characters and click "Apply" to change or create passwords.

The form includes four input fields: 'Username:' with a dropdown menu showing 'admin', 'Old Password:' with four dots, 'New Password:' with four dots, and 'Confirm Password:' with four dots. A 'Save/Apply' button is positioned at the bottom right of the form.

Figure 69. Management – Access Control – Passwords

8.6 Update Software

The new software could be updated from the Local PC connected to AG10W via Ethernet cable. Click on “Browse” to locate the new software image file in the PC. And then Click on “Update Software” to proceed the software update.

Note: The update process takes about 2 minutes to complete, and your AG10W will reboot automatically.

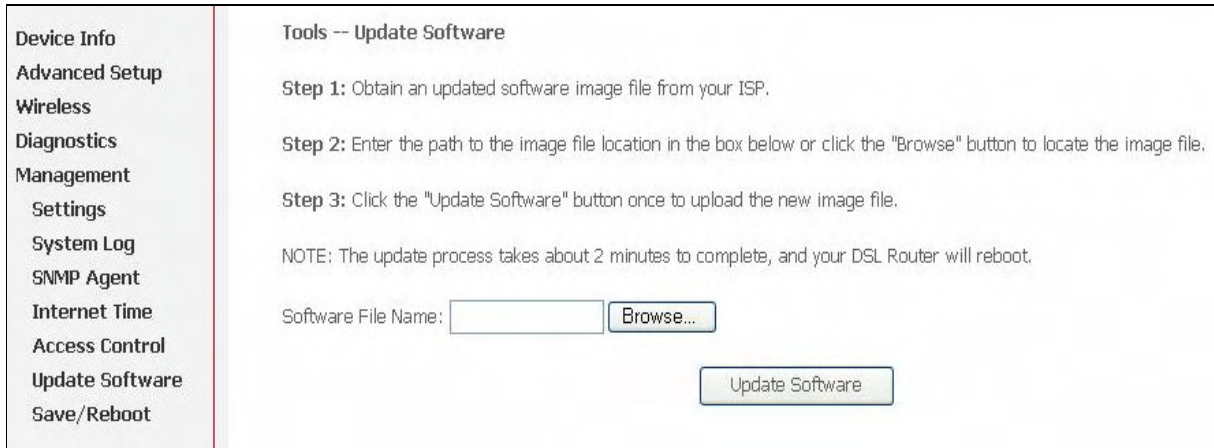

Figure 70. Management – Update Software

8.7 Save/Reboot

Click “Reboot Router” to reboot AG10W. AG10W would automatically save the configuration before reboot, so that modified settings would take effect after reboot.

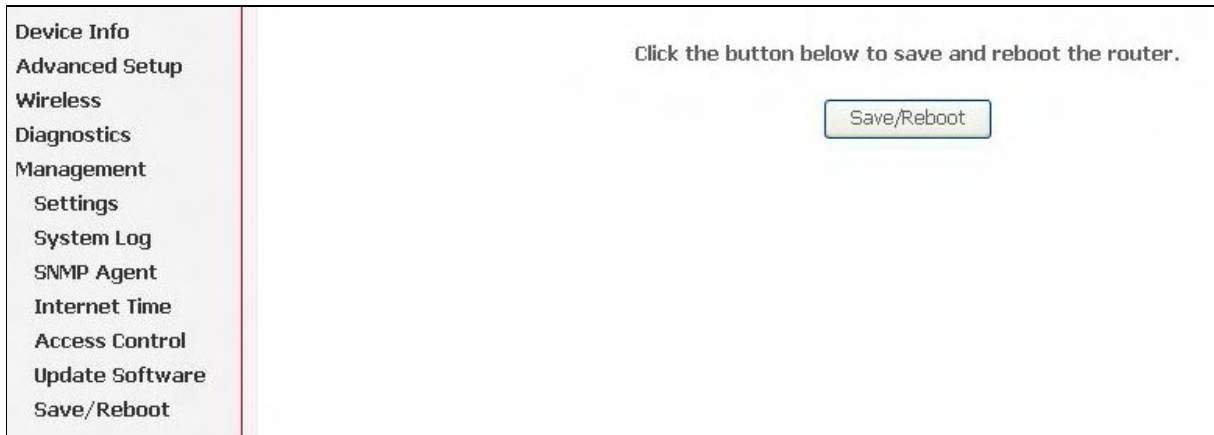

Figure 71. Management – Save and Reboot

Part 68 Statement

This equipment complies with Part 68 of the FCC rules and the requirements adopted by the ACTA. On the base of this equipment is a label that contains, among other information, a product identifier in the format US: VW7DL01BAG10W. If requested, this number must be provided to the telephone company. The REN is used to determine the number of devices that may be connected to a telephone line. Excessive RENs on a telephone line may result in the devices not ringing in response to an incoming call. In most but not all areas, the sum of RENs should not exceed five (5.0). To be certain of the number of devices that may be connected to a line, as determined by the total RENs, contact the local telephone company. For products approved after July 23, 2001, the REN for this product is part of the product identifier that has the format US: VW7DL01BAG10W. The digits represented by 01B are the REN without a decimal point (e.g., 03 is a REN of 0.3). For earlier products, the REN is separately shown on the label. If your equipment causes harm to the telephone network, the telephone company may discontinue your service temporarily. If possible, they will notify you in advance. But if advance notice is not practical, you will be notified as soon as possible. You will be informed of your right to file a complaint with the FCC. Your telephone company may make changes in its facilities, equipment, operations or procedures that could affect the proper functioning of your equipment. If they do, you will be notified in advance to give you an opportunity to maintain uninterrupted telephone service. If you experience trouble with this telephone equipment, please contact the following address and phone number for information on obtaining service or repairs. The telephone company may ask that you disconnect this equipment from the network until the problem has been corrected or until you are sure that the equipment is not malfunctioning. This equipment may not be used on coin service provided by the telephone company. Connection to party lines is subject to state tariffs.

Company: ClearAccess Inc
 Address: 1206-B NE 146th Street, Vancouver, WA 98685, U.S.A.
 Tel no.: (360) 859-1783

A plug and jack used to connect this equipment to the premises wiring and telephone network must comply with the applicable FCC Part 68 rules and requirements adopted by the ACTA. A compliant telephone cord and modular plug is provided with this product. It is designed to be connected to a compatible modular jack that is also compliant. See installation instructions for details.

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

IEEE 802.11b or 802.11g operation of this product in the U.S.A. is firmware-limited to channels 1 through 11.

IMPORTANT NOTE:

FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

The availability of some specific channels and/or operational frequency bands are country dependent and are firmware programmed at the factory to match the intended destination.

The firmware setting is not accessible by the end user.

Industry Canada Statement

This device complies with RSS-210 of the Industry Canada Rules. Operation is subject to the following two conditions:

- 1) this device may not cause interference and
- 2) this device must accept any interference, including interference that may cause undesired operation of the device

This device has been designed to operate with an antenna having a maximum gain of 2dBi. Antenna having a higher gain is strictly prohibited per regulations of Industry Canada. The required antenna impedance is 50 ohms.

To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the EIRP is not more than required for successful communication.

IMPORTANT NOTE:

IC Radiation Exposure Statement:

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.
