GENERAL REMARKS

The attached report shall not be reproduced except in full without the written permission of Timco Engineering Inc.

Summary

The device under test does:

- Fulfill the general approval requirements as identified in this test report and was selected by the customer.
- Not fulfill the general approval requirements as identified in this test report.

Attestations

This equipment has been tested in accordance with the standards identified in this test report. To the best of my knowledge and belief, these tests were performed using the measurement procedures described in this report.

All instrumentation and accessories used to test products for compliance to the indicated standards are calibrated regularly in accordance with ISO 17025 requirements.

I attest that the necessary measurements were made at:

Timco Engineering Inc.
849 NW State Road 45
Newberry, FL 32669

Tested by:

Christian Pawlak, Engineering Project Manager
Date: 02/21/2017

Reviewed and approved by: _____
Sid Sanders, Engineer
Date: 2/23/2017

EUT SPECIFICATION

EUT Description	X BAND RADAR
FCC ID	VYMVALIDATOR
Model Number	VALIDATOR
Serial Number	N/A
Operating Frequency	9.2 – 9.3 GHz
Type of Emission	Pulsed
EUT Power Source	<input checked="" type="checkbox"/> 110–120Vac/ 50– 60Hz – Shipboard only
	<input type="checkbox"/> DC Power ()
	<input type="checkbox"/> Battery Operated Exclusively
Test Item	<input checked="" type="checkbox"/> Prototype
	<input type="checkbox"/> Pre-Production
	<input type="checkbox"/> Production
Type of Equipment	<input checked="" type="checkbox"/> Fixed
	<input type="checkbox"/> Mobile
	<input type="checkbox"/> Portable

TEST SETUP INFORMATION

Test facility	Timco Engineering, Inc. 849 NW State Road 45 Newberry, FL 32669
Test Condition	Temperature: 26°C Relative humidity: 50%. Barometer: 1012.5mb
Modifications	None
Test Exercise	The EUT was placed in continuous transmit mode of operation
Applicable Standards	ANSI C63.26, FCC 47 CFR Part 80

RF POWER OUTPUT

Rule Part No.: Part 2.1033(c)(8), Part 2.1046(a), Part 80.215(a)(3)

Requirements:

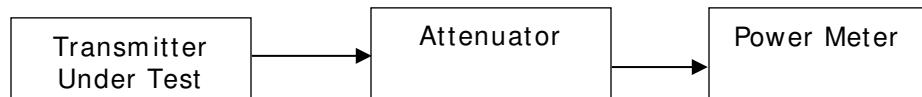

Part 80.215(a)(3) – Mean power shall be measured

Method of Measurement:

Mean RF power is measured by connecting a 50-ohm Peak Power meter to the RF output connector and measuring the peak power of each state.

Test Setup Diagram:

b) Method of Measurement

Test Data:

As the EUT cycles between high and low power states, the power of each state was multiplied by the respective duty cycle to obtain mean output power.

The formula used was: $DC_L P_L + DC_H P_H = P_{AVG}$

An external 3dB attenuator was used.

State	Power (dBm)	Power (mW)	Duty Cycle	Contribution (mW)
High	19.72	93.76	11.27%	10.57
Low	11.82	15.21	88.73%	13.49
Total:				24.06

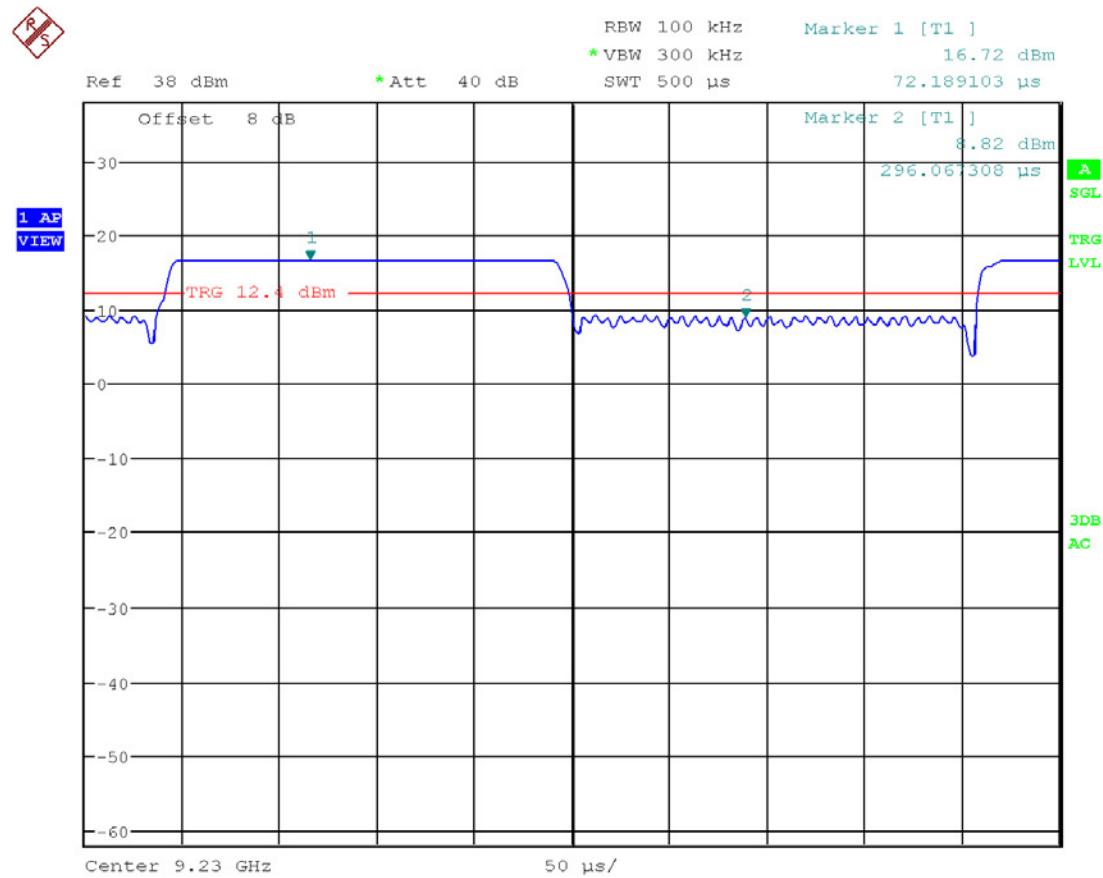

DC input to the final amplifier was less than 24 VDC, 2.5A.

Results Meet Requirements

MODULATION CHARACTERISTICS

Rule Part No.: None

Requirements: None

Method of Measurement: Modulation Characteristics are reported using a 50-ohm peak power sensor or spectrum analyzer in zero span mode.

Test Setup Diagram:

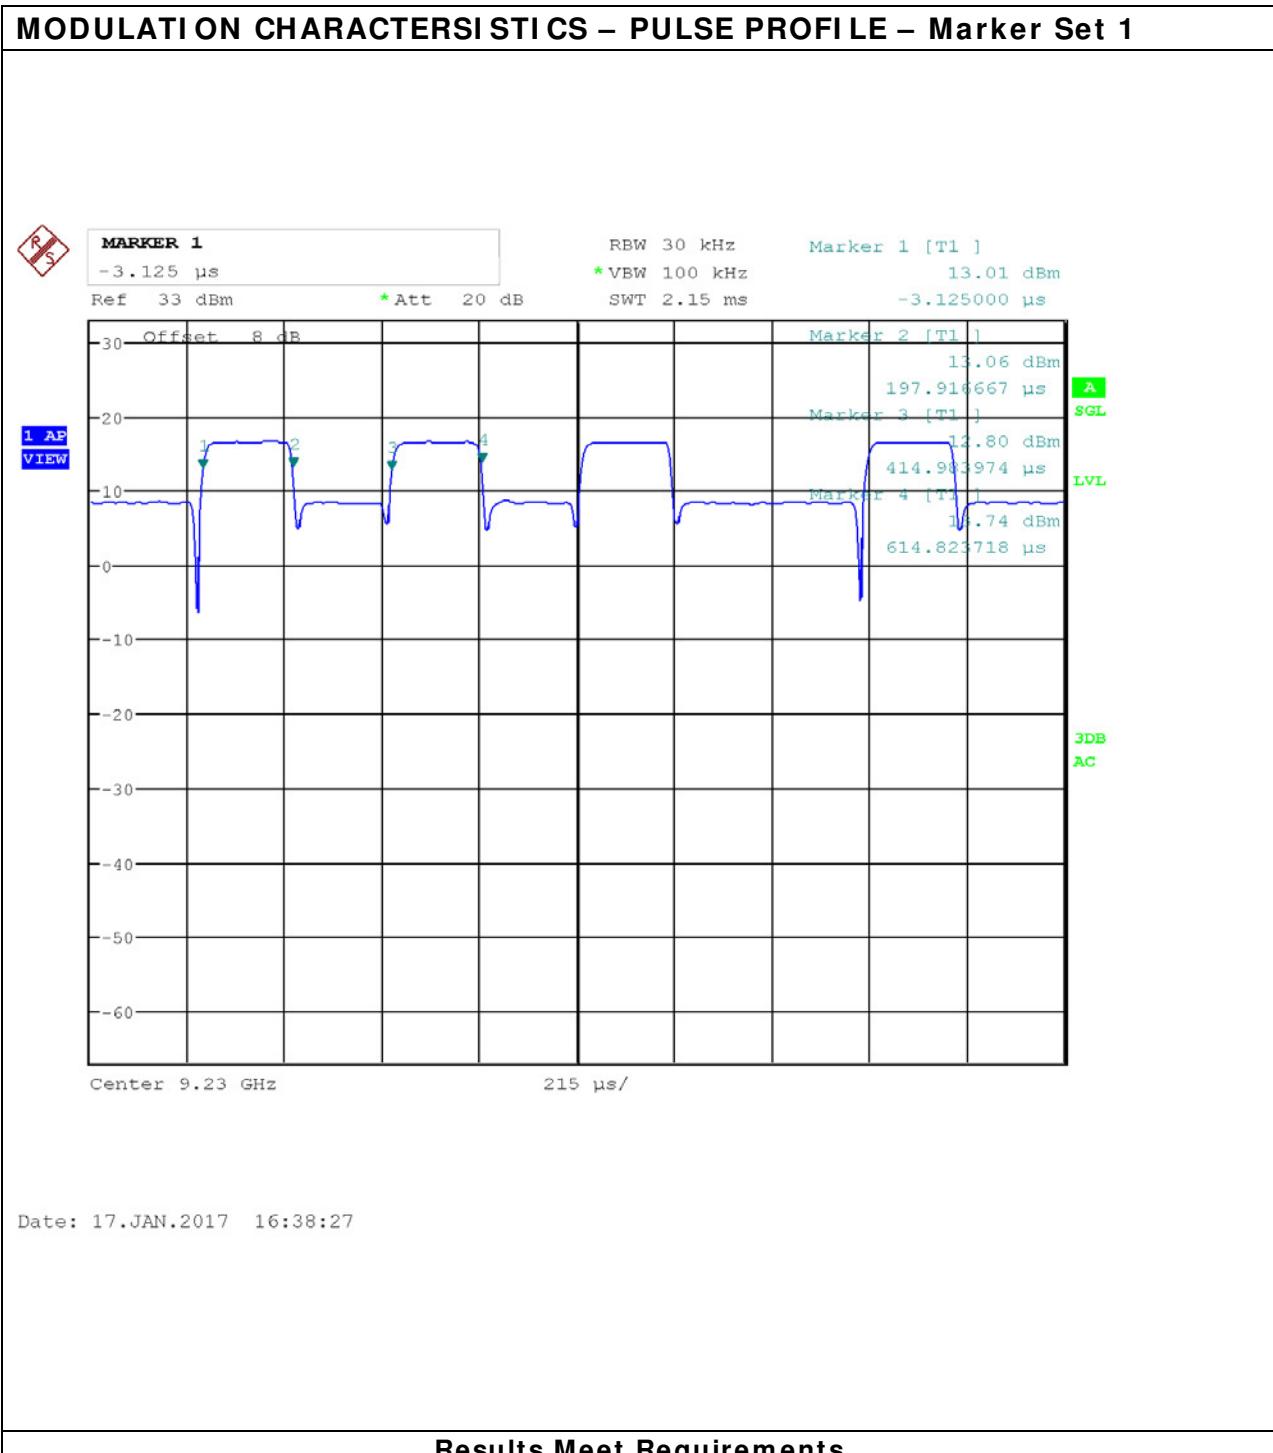

Test Data:

Pulse Type	Pulse Width (us)	Period (us)	Duty Cycle
High	802	7114	11.27%
Low	6312	7114	88.73%

OCCUPIED BANDWIDTH

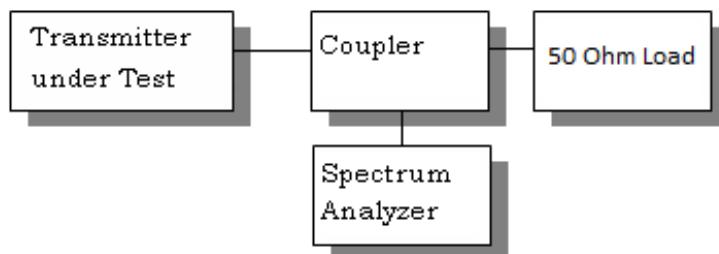

Rule Part No.: Part 80.205(a)

Requirements:

Part 80.205(a): Emissions must remain within the band

Method of Measurement: Measurements were made in accordance with standard listed above.

SPURIOUS EMISSIONS AT ANTENNA TERMINALS (CONDUCTED)

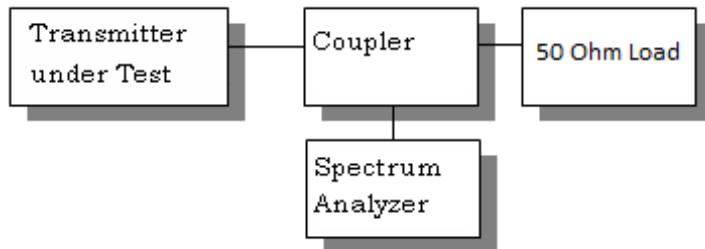

Rule Part No.: Part 2.1051(a), Part 80.211(f)

Requirements:

Part 80.211(f): $43 + 10\log(\text{mean power in watts})$
 $43 + 10\log(0.0126) = -23.8 \text{ dBc}$
 Average emissions must not exceed $10.8 - 23.8 = -13 \text{ dBm}$

Method of Measurement: Measurements were made in accordance with standards listed.

Block Diagram:

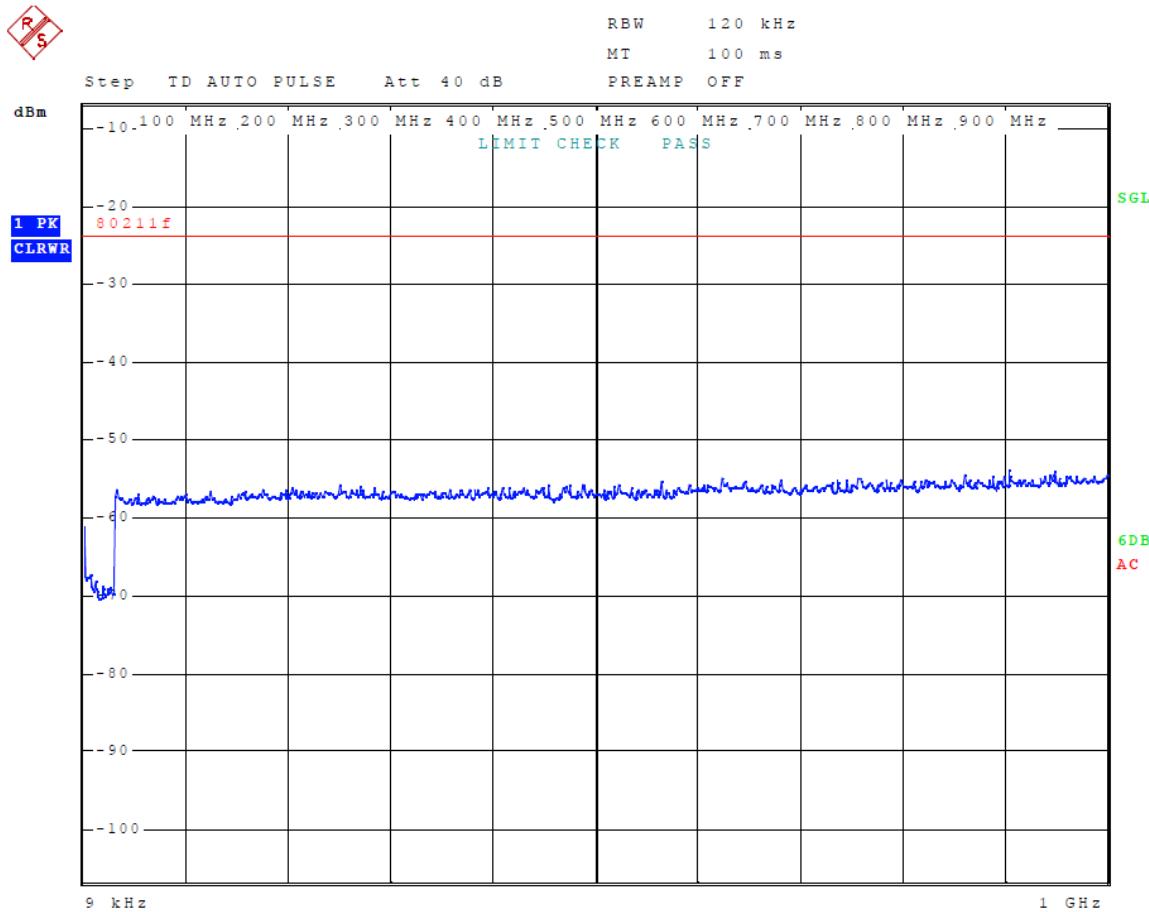

Test Data:

See Plots.

FIELD STRENGTH OF SPURIOUS EMISSIONS

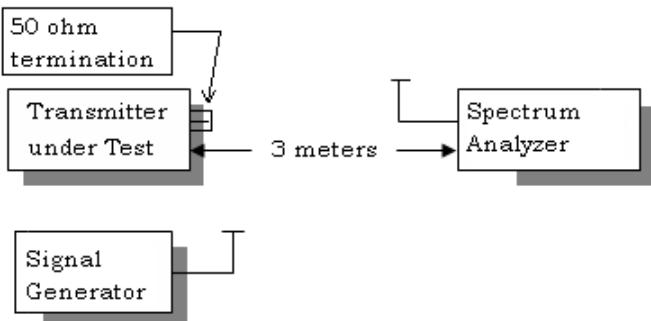

Rule Parts. No.: FCC Part 2.1053, Part 80.211(f)

Requirements:

Part 80.211(f): $43 + 10\log(\text{mean power in watts})$
 $43 + 10\log(0.0126) = -23.8 \text{ dBc}$
 $10.8 - 23.8 = -13 \text{ dBm ERP} = 84.38 \text{ dBuV/m at 3m}$
 Radiated emissions must not exceed 84.38 dBuV/m at 3m

METHOD OF MEASUREMENT: The tabulated data shows the results of the radiated field strength emissions test. The spectrum was scanned from 30 MHz to at least the tenth harmonic of the fundamental or 40 GHz.

Test Setup Diagram:

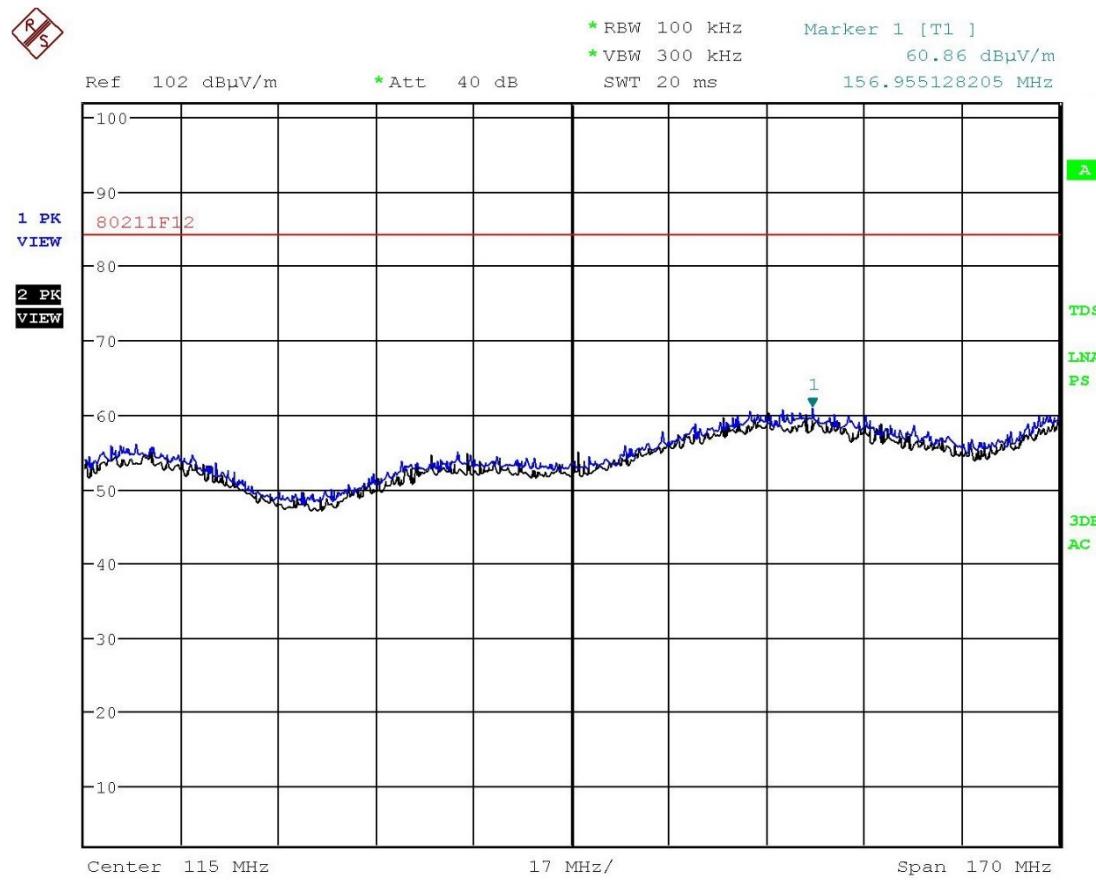

Test Data:

See Plots.

Page 22 of 24

FREQUENCY STABILITY

Rule Parts. No.: FCC Part 2.1055, Part 80.209(b)

Requirements

Part 80.209(b): Emissions must not be closer than $1.5/T$ MHz from the band edges, where T is the pulse duration in microseconds

Duration of shortest pulse is 199.84 us

Emissions must not be closer than $1.5 / 199.84 = 0.0075$ MHz from the band edge

Method of Measurements: The test procedure was modified to measure the peak point of the emission envelope.

Test Data:

Temperature (°C)	Frequency (MHz)	Margin Below (MHz)	Margin Above (MHz)
25 (ref)	9230	30	70
-20	9230	30	70
-10	9230	30	70
0	9230	30	70
10	9230	30	70
20	9230	30	70
30	9230	30	70
40	9230	30	70
50	9230	30	70

Carrier did not deviate more than 1 MHz. Worst case frequency stability is:
 $1 \text{ MHz} / 9230 \text{ MHz} = 108.3 \text{ PPM}$

Results Meet Requirements
