### 3.2 Equivalent isotropic radiated power

FCC Rule: 15.247(c)(1)
Systems operating in the $5725-5850 \mathrm{MHz}$ band that are used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6 dBi without any corresponding reduction in transmitter conducted output power.

Test equipment used: ETSTW-RE 055

### 3.3 RF Exposure Compliance Requirements

Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess limit for maximum permissible exposure. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as a mobile device whereby a distance of 0.3 m normally can be maintained between the user and the device.

### 3.3.1 Applicable Standard

Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess limit for maximum permissible exposure. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as a mobile device whereby a distance of 0.3 m normally can be maintained between the user and the device.

$\mathrm{E}=$ Electric field $(\mathrm{V} / \mathrm{m}) \mathrm{P}=$ output power $(\mathrm{W}) \mathrm{G}=$ EUT Antenna numeric gain (numeric)
$\mathrm{d}=$ Separation distance between radiator and human body (m)
The formula can be changed to
