## TEST REPORT

Application No. :
Applicant:
FCC ID:
Fundamental Frequency: $\quad 49.860 \mathrm{MHz}$ (internal modulation)
GLEMO090501347RF
XQ ARTS TOYS CO., LTD.
W2MXQTOYS49MH

EUT Name: RC CAR SERIES
XQ092, XQ090, XQ091, XQ097, XQRC18-1, XQRC18-2,
Model No.: XQRC18-3, XQRC18-4, XQRC18-5, XQRC18-6, XQ064, XQ065, XQ066, XQ069, XQ072, XQ075, XQ076, XQ078, XQ080, XQ082, XQ032, XQ056, XQ060, XQ063, XQ034*

* Please refer to section 3 of this report which indicates which Item was actually tested and which were electrically identical.

## Standards:

Date of Receipt:
Date of Test:
Date of Issue:
Equipment Under Test (EUT):

FCC PART15 SUBPART C: 2008
19 May 2009
20 May to 22 May 2009
22 May 2009

| Test Result : | PASS * |
| :--- | :--- |

* In the configuration tested, the EUT detailed in this report complied with the standards specified above. Please refer to section 3 of this report for further details..

## Lab Manager

The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. All test results in this report can be traceable to National or International Standards.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at www.sgs.com/terms and conditions.htm and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at www.sgs.com/terms e-document.htm. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only

## 3 Test Summary

| Test | Test Requirement | Stanadard Paragraph | Result |
| :--- | :---: | :---: | :---: |
| Occupied Bandwidth | FCC PART $15: 2008$ | Section 15.235 | PASS |
| Carrier Emissions | FCC PART $15: 2008$ | Section 15.235 | PASS |
| Radiated Emission <br> $(30 \mathrm{MHz}$ to 1000 MHz$)$ | FCC PART $15: 2008$ | Section $15.235 \& 15.209$ | PASS |

Tx: In this whole report Tx (or tx) means Transmitter.
Rx : In this whole report Rx (or rx ) means Receiver.
RF: In this whole report RF means Radiated Frequency.

* Remark:

Item No.: XQ092, XQ090, XQ091, XQ097, XQRC18-1, XQRC18-2, XQRC18-3, XQRC18-4, XQRC185, XQRC18-6, XQ064, XQ065, XQ066, XQ069, XQ072, XQ075, XQ076, XQ078, XQ080, XQ082, XQ032, XQ056, XQ060, XQ063, XQ034

Only the Item XQ092 was tested, since the electrical circuit design, PCB layout, components used and internal wiring were identical for the above items, only the outer decorations are different acrodding to the conformation from the applicant (manufacturer).

## 5 General Information

### 5.1 Client Information

Applicant Name: XQ ARTS TOYS CO., LTD.
Applicant Address: North of Xing Ye Road, Lai Mei Industrial District Shan Tou, 515800 China

### 5.2 Details of E.U.T.

EUT Name:
Item No.:

RC CAR SERIES
XQ092, XQ090, XQ091, XQ097, XQRC18-1, XQRC18-2, XQRC18-3, XQRC18-4, XQRC18-5, XQRC18-6, XQ064, XQ065, XQ066, XQ069, XQ072, XQ075, XQ076, XQ078, XQ080, XQ082, XQ032, XQ056, XQ060, XQ063, XQ034

Power Supply: 9V DC ("6F22")
Power Cord: None

### 5.3 Description of Support Units

The EUT was tested as an independent unit: 49.860 MHz radio transmitter.

### 5.4 Standards Applicable for Testing

The customer requested FCC tests for the EUT.
The standard used was FCC PART 15, SUBPART C: 2008 (Section 15.235);

### 5.5 Test Location

All tests were performed at:
SGS-CSTC Standards Technical Services Co., Ltd., Guangzhou EMC Laboratory, 198 Kezhu Road, Scientech Park, Guangzhou Economic \& Technology Development District, Guangzhou, China 510663
Tel: +86 2082155555 Fax: +86 2082075059
No tests were sub-contracted.

### 5.6 Other Information Requested by the Customer

None.

SGS-CSTC Standards Technical Services Co., Ltd.
Report No.: GLEMO09050134701
Page: 6 of 13
FCC ID: W2MXQTOYS49MH

### 5.7 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

- NVLAP - Lab Code: 200611-0

SGS-CSTC Standards Technical Services Co., Ltd., Guangzhou EMC Laboratory is recognized under the National Voluntary Laboratory Accreditation Program (NVLAP/NIST). NVLAP Code: 200611-0.

- FCC - Registration No.: 282399

SGS-CSTC Standards Technical Services Co., Ltd., EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration 282399, May 31, 2002.

## 7 Test Results

### 7.1 E.U.T. test conditions

Power supply:
Requirements:

Type of antenna:
Operating Environment:
Temperature:
Humidity:
Atmospheric Pressure:
Test frequencies:

DC 9V ("6F22") (New batteries)
15.31(e) :For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between $85 \%$ and $115 \%$ of the nominal rated supply voltage. For battery operated equipment, the equipment tests shall be performed using a new battery. Integral
$22.0-25.0^{\circ} \mathrm{C}$
40-60\% RH
1002-1010 mbar
According to the $15.31(\mathrm{~m})$ Measurements on intentional radiators or receivers, other than TV broadcast receivers, shall be performed and, if required, reported for each band in which the device can be operated with the device operating at the number of frequencies in each band specified in the following table:

| Frequency range over | Number of <br> which device operates | Location in the range <br> of operation |
| :--- | :--- | :--- |

which device operates frequencies of operation

| 1 MHz or less | 1 | Middle |
| :--- | :--- | :---: |
| 1 to 10 MHz | 2 | 1 near top and 1 near bottom |
| More than 10 MHz | 3 | 1 near top, 1 near middle and 1 near bottom |

Test nominal frequency: 49.860 MHz

### 7.2 Radiated Emissions

Test Requirement:
Test Method:
Test Date:
Measurement Distance:
Requirements:

Test Procedure

Detector: Peak Scan (9kHz resolution bandwidth for 9 kHz to 30 MHz ;
120 kHz resolution bandwidth for 30 MHz to 1000 MHz )
ANSI C63.4-2003 (Revision of ANSI C63.4-2001)
22 May 2009
3m (Semi-Anechoic Chamber)
15.235(a) :The field strength of any emission within this band shall not exceed 10,000 microvolts/meter at 3 meters. The emission limit in this paragraph is based on measurement instrumentation employing an average detector. The provisions in Section 15.35 for limiting peak emissions apply.
15.235(b) : The field strength of any emissions appearing between the band edges and up to 10 kHz above and below the band edges shall be attenuated at least 26 dB below the level of the unmodulated carrier or to the general limits in Section 15.209, whichever permits the higher emission levels. The field strength of any emissions removed by more than 10 kHz from the band edges shall not exceed the general radiated emission limits in Section 15.209. All signals exceeding 20 microvolts/meter at 3 meters shall bereported in the application for certification.
Out of band emissions shall not exceed:
$40.0 \mathrm{~dB} \mu \mathrm{~V} / \mathrm{m}$ between $30 \mathrm{MHz} \& 88 \mathrm{MHz}$
$43.5 \mathrm{~dB} \mu \mathrm{~V} / \mathrm{m}$ between $88 \mathrm{MHz} \& 216 \mathrm{MHz}$
$46.0 \mathrm{~dB} \mu \mathrm{~V} / \mathrm{m}$ between $216 \mathrm{MHz} \& 960 \mathrm{MHz}$
$54.0 \mathrm{~dB} \mu \mathrm{~V} / \mathrm{m}$ above 960 MHz

1) 9 K to 30 MHz emissions:

For testing performed with the loop antenna, testing was performed in accordance to ANSI C63.4 section 8.2.1. The center of the loop was positioned 1 m above the ground and positioned with its plane vertical at the specied distance from the EUT.During testing the loop was rotated about its vertical axis for maximum response at each azimuth and also investigated with the loop positioned in the horizontal plane.
2) 30 MHz to 1 GHz emissions:

For testing perfomed with the bi-log type antenna, testing was perfomed in accordance to ANSI C63.4. The measurement is performed with the EUT rotated $360^{\circ}$, the antenna height scaned between 1 m and 4 m , and the antenna rotated to repeat the measurement for both the horizontal and vertical polarizations.
3) 1 GHz to 40 GHz emissions:

For testing perfomed with the horn antenna, testing was perfomed in accordance to ANSI C63.4. The measurement is performed with the EUT rotated $360^{\circ}$, the antenna height scaned between 1 m and 4 m , and the antenna rotated to repeat the measurement for both the horizontal and vertical antenna polarizations.

### 7.2.1 Carrier Emissions:

Pre-test the EUT in $\mathrm{X}, \mathrm{Y}$ and Z axis,.
Y: EUT as Radiated Emission test setup photograph in section 8 of this report.
X: rotate EUT by $90^{\circ}$ clockwise.
$Z$ : rotate EUT by $90^{\circ}$ vertically.
The maximum emissions was found in the $Y$ axis.
Measurement record:

### 7.2.2 Unwanted Radiated emissions

Test Procedure: The procedure used was ANSI Standard C63.4-2003. The receive was scanned from 30 MHz to 1000 MHz . When an emission was found, the table was rotated to produce the maximum signal strength. An initial pre-scan was performed for in peak detection mode using the receiver. The EUT was measured for both the Horizontal and Vertical polarities and performed a pre-test three orthogonal planes. The worst case emissions were reported.

An initial pre-scan was performed in the $3 m$ chamber using the spectrum analyser in peak detection mode. Quasi-peak measurements were conducted based on the peak sweep graph. The EUT was measured by Bilog antenna with 2 orthogonal polarities
The field strength is calculated by adding the Antenna Factor, Cable Factor \& Peramplifier. The basic equation with a sample calculation is as follows:
Final Test Level =Receiver Reading + Antenna Factor + Cable Factor -Peramplifier Factor.
The following test results were performed on the EUT.

SGS-CSTC Standards Technical Services Co., Ltd.
Report No.: GLEMO09050134701
Page: 12 of 13
FCC ID: W2MXQTOYS49MH
Test the EUT in transmitting mode.

| 347.19 | 40.62 | 14.2 | 1.7 | 24.47 | 32.05 | 46 | -13.95 |

## Remark:

According to 15.35 (b) When average radiated emission measurements are specified in the regulations, including emission measurements below 1000 MHz , there is also a limit on the radio frequency emissions, as measured using instrumentation with a peak detector function, corresponding to 20 dB above the maximum permitted average limit for the frequency being investigated unless a different peak emission limit is otherwise specified in the rules, e.g., see Section 15.255.
Test Results: The unit does meet the FCC Part 15 C Section 15.235 requirements.

SGS-CSTC Standards Technical Services Co., Ltd.
Report No.: GLEMO09050134701
Page: 13 of 13

### 7.3 Occupied Bandwidth

Test Requirement:
Test Method:
Test Date:
Requirements:

Method of measurement:

FCC Part 15 C Section 15.235
ANSI C63.4-2003(Revision of ANSI C63.4-2001)
20 May 2009
15.235(b):The field strength of any emissions appearing between the band edges and up to 10 kHz above and below the band edges shall be attenuated at least 26 dB below the level of the unmodulated carrier
Operation within the band $49.81-49.91 \mathrm{MHz}$
The useful radiated emission from the EUT was detected by the spectrum analyser with peak detector. The vertical Scale is set to 10 dB per division. The horizontal scale is set to 20 KHz per division. Read the down 26dB bandwidth of the carrier.

The 26 dB down bandwidth lower edge is: 49.84056 MHz
The 26dB down bandwidth upper edge is: 49.88064 MHz
Operation within the band $49.81-49.91 \mathrm{MHz}$
The results: The unit does meet the FCC requirements
