Maximum Permissible Exposure

1. Applicable Standards

Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess limit for maximum permissible exposure. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as a mobile device whereby a distance of 0.2m normally can be maintained between the user and the device.

1.1. Limits for Maximum Permissible Exposure (MPE)

(a) Limits for Occupational/Controlled Exposure

| Frequency | Electric Field | Magnetic Field | Power Density (S) | Averaging Times |
|------------|----------------|----------------|-------------------|----------------------------------------|
| Range | Strength (E) | Strength (H) | (mW/cm^2) | $\mid E \mid^2$, $\mid H \mid^2$ or S |
| (MHz) | (V/m) | (A/m) | | (minutes) |
| 0.3-3.0 | 614 | 1.63 | (100)* | 6 |
| 3.0-30 | 1842/f | 4.89/f | (900/f)* | 6 |
| 30-300 | 61.4 | 0.163 | 1.0 | 6 |
| 300-1500 | | | F/300 | 6 |
| 1500-10000 | | | 5 | 6 |

(b) Limits for General Population / Uncontrolled Exposure

| Frequency | Electric Field | Magnetic Field | Power Density (S) | Averaging Times |
|-------------|----------------|----------------|-------------------|----------------------------------|
| Range (MHz) | Strength (E) | Strength (H) | (mW/cm^2) | $ E ^{2}, H ^{2} \text{ or } S$ |
| | (V/m) | (A/m) | | (minutes) |
| 0.3-1.34 | 614 | 1.63 | (100)* | 30 |
| 1.34-30 | 824/f | 2.19/f | (180/f)* | 30 |
| 30-300 | 27.5 | 0.073 | 0.2 | 30 |
| 300-1500 | | | F/1500 | 30 |
| 1500-10000 | | | 1.0 | 30 |

Note: f=frequency in MHz; *Plane-wave equivalent power density

EST Technology Co. ,Ltd Report No. ESTE-R2003017 Page 2 of 4

1.2. MPE Calculation Method

$$E (V/m) = \frac{\sqrt{30 \times P \times G}}{d}$$
 Power Density: Pd $(W/m^2) = \frac{E^2}{377}$

E = Electric Field (V/m)

P = Peak RF output Power (W)

G = EUT Antenna numeric gain (numeric)

d = Separation distance between radiator and human body (m)

The formula can be changed to

$$Pd = \frac{30 \times P \times G}{377 \times d^2}$$

From the peak EUT RF output power, the minimum mobile separation distance, d=0.2m, as well as the gain of the used antenna, the RF power density can be obtained

2. Conducted Power Result

| Mode | Frequency | Peak output power | Peak output | Target power | Antenna gain | |
|------|-----------|-------------------|-------------|--------------|--------------|----------|
| | (MHz) | (dBm) | power (mW) | (dBm) | (dBi) | (Linear) |
| | 2402 | -9.42 | 0.1143 | -9±1 | 1.5 | 1.41254 |
| BLE | 2441 | -10.92 | 0.0809 | -10±1 | 1.5 | 1.41254 |
| | 2480 | -12.81 | 0.0524 | -12±1 | 1.5 | 1.41254 |

3. Calculated Result and Limit

| Mode | Target power (dBm) | | na gain (Linear) | Power Density (S) (mW/cm ²) | Limited of Power Density (S) (mW/cm ²) | Test Result |
|------|--------------------|-----|---------------------|-----------------------------------------|----------------------------------------------------|-------------|
| BLE | -8 | 1.5 | 1.41254 | 0.00004 | 1 | Compiles |
