## LoRa Transmitter Exclusion

The LoRa transmitter can operate at a maximum duty cycle of 250mS per minute. This results in average transmitter power being reduced by operating only 250 in 60,000 ms which equates to 0.00417 duty cycle. 30mw with duty cycle correction equates to 30\*0.00417 which equates to average power of 0.12510 mW.

FCC IC SAR Exclu	sion
