**Evaluation of verykool USA Inc. I250 mobile phone
FCC id: WA6I250**

I have assessed the above referenced submission for the verykool model I250 and found it to be compliant. The product is a GSM/GPRS/EDGE Digital Mobile Phone with Bluetooth and USB port.

The following were noted and resolved during the evaluation.

1. Equipment Specifications

A clarification was requested concerning the equipment specifications on the application form which omitted the EGPRS function, this was addressed and the application form and report re-issued.

2. Internal photographs

As originally submitted the internal photographs did not show the distance between the GSM transmitter and the Bluetooth transmitter. Revised photographs were submitted confirming the separation distance of 8.5 cm.

3. General

The product was tested for both Head and Body SAR.
The highest reported Head SAR for the product was 0.556 W/kg
The highest reported Body SAR for the product with 1.5 cm separation was 0.313 W/kg

I have reviewed the SAR using the FCC supplied Checklist.
I underwent the FCC SAR evaluation training at BABT in May 2006 and July 2007.

Yours sincerely
