

# **RADIO TEST REPORT**

## Test Report No.: 14098787H-A-R1

| Applicant           | : | Mitsubishi Electric Corporation Himeji Works |
|---------------------|---|--|
| Type of EUT         | : | Smart Keyless System (Smart Unit)            |
| Model Number of EUT | : | SKEA7D-04                                    |
| FCC ID              | : | WAZSKEA7D04                                  |
| Test regulation     | : | FCC Part 15 Subpart C: 2021                  |
| Test Result         | : | <b>Complied</b> (Refer to SECTION 3)         |

- 1. This test report shall not be reproduced in full or partial, without the written approval of UL Japan, Inc.
- 2. The results in this report apply only to the sample tested.
- 3. This sample tested is in compliance with the limits of the above regulation.
- 4. The test results in this test report are traceable to the national or international standards.
- 5. This test report must not be used by the customer to claim product certification, approval, or endorsement by the A2LA accreditation body.
- 6. This test report covers Radio technical requirements. It does not cover administrative issues such as Manual or non-Radio test related Requirements. (if applicable)
- 7. The all test items in this test report are conducted by UL Japan, Inc. Ise EMC Lab.
- 8. The opinions and the interpretations to the result of the description in this report are outside scopes where UL Japan has been accredited.
- 9. The information provided from the customer for this report is identified in SECTION 1.
- 10. This report is a revised version of 14098787H-A. 14098787H-A is replaced with this report.

Date of test: December 26, 2021 to January 11, 2022 **Representative test** engineer: Kiyoshiro Okazaki Engineer Approved by: Tsubasa Takayama Leader

The testing in which "Non-accreditation" is displayed is outside the accreditation scopes in UL Japan. There is no testing item of "Non-accreditation".

## **SECTION 1: Customer information**

| Company Name     | : | Mitsubishi Electric Corporation Himeji Works              |
|------------------|---|---|
| Address          | : | 840, Chiyoda-machi, Himeji City, Hyogo-ken 670-8677 Japan |
| Telephone Number | : | +81-79-298-7363   |
| Contact Person   | : | Yasuhiro Takahashi  |

The information provided from the customer is as follows;

- Applicant, Type of EUT, Model Number of EUT, FCC ID on the cover and other relevant pages
- Operating/Test Mode(s) (Mode(s)) on all the relevant pages
- SECTION 1: Customer information
- SECTION 2: Equipment under test (EUT)
- SECTION 4: Operation of EUT during testing
- \* The laboratory is exempted from liability of any test results affected from the above information in SECTION 2 and 4.

### **SECTION 2: Equipment under test (EUT)**

#### 2.1. Identification of EUT

| Туре          | : | Smart Keyless System (Smart Unit)                                 |
|---------------|---|---|
| Model Number  | : | SKEA7D-04   |
| Serial Number | : | Refer to SECTION 4.2  |
| Receipt Date  | : | December 9, 2021  |
| Condition     | : | Production prototype  |
|               |   | (Not for Sale: This sample is equivalent to mass-produced items.) |
| Modification  | : | No Modification by the test lab.                                  |

#### 2.2. Product Description

Model: SKEA7D-04 (referred to as the EUT in this report) is a Smart Keyless System (Smart Unit).

#### **General Specification**

| Rating | : | DC 12.0 V |
|--------|---|-----------|
|--------|---|-----------|

#### **Radio Specification**

| LF Part                       |   |                 |
|-------------------------------|---|-----------------|
| Equipment Type                | : | Transmitter     |
| Frequency of operation        | : | 125 kHz         |
| Type of modulation            | : | ASK             |
| Clock frequency (maximum)     | : | 8 MHz           |
| Antenna Type                  | : | Inductive       |
| <u>RF Part</u> *1)            |   |                 |
| Type of Receiver              | : | Receiver        |
| Frequency of operation        | : | 315 MHz         |
| Intermediate frequency        | : | 280 kHz         |
| Antenna Type                  | : | Pattern antenna |
| Local Oscillator Frequency    | : | 314.72 MHz      |
| Clock Frequency (maximum)     | : | 30.32 MHz       |
| Voltage Controlled Oscillator | : | 1888.32 MHz     |

\*1) The test of RF Part was performed separately from this test report, and the conformability is confirmed.

| Test report No. | : 14098787H-A-R1    |
|-----------------|---------------------|
| Page            | : 6 of 18           |
| Issued date     | : February 16, 2022 |
| FCC ID          | : WAZSKEA7D04       |

## **SECTION 3:** Test specification, procedures & results

#### 3.1 Test Specification

| Test Specification | :     | FCC Part 15 Subpart C<br>FCC Part 15 final revised on May 3, 2021 and effective July 2, 2021            |
|--------------------|-------|---|
| Title              | :     | FCC 47CFR Part15 Radio Frequency Device Subpart C Intentional Radiators Section 15.207 Conducted limits |
|                    |       | Section 15.209 Radiated emission limits; general requirements.  |
| *Also the EUT com  | plies | with FCC Part 15 Subpart B.   |

#### 3.2 Procedures and results

| Item                       | Test Procedure          | Specification  | Remarks  | Deviation | Worst margin          | Results  |
|----------------------------|-------------------------|----------------|----------|-----------|-----------------------|----------|
| Conducted Emission         | <fcc></fcc>             | <fcc></fcc>    | -        | N/A       | N/A                   | N/A      |
|                            | ANSI C63.10:2013        | Section 15.207 |          |           |                       | *1)      |
|                            | 6 Standard test methods | <ised></ised>  |          |           |                       |          |

|                            | -                       |                |          |           |                       |          |

Note: UL Japan, Inc.'s EMI Work Procedures No. 13-EM-W0420 and 13-EM-W0422.

\*1) The test is not applicable since the EUT is not the device that is designed to be connected to the public utility (AC) power line.

a) Refer to APPENDIX 1 (data of Radiated emission)

b) Refer to APPENDIX 1 (data of -20 dB Bandwidth / 99 % Occupied Bandwidth)

Symbols:CompliedThe data of this test item has enough margin, more than the measurement uncertainty.Complied#The data of this test item meets the limits unless the measurement uncertainty is taken into consideration.

#### FCC Part 15.31 (e)

The battery voltage (DC 12V) is provided to the EUT. Input voltage to RF part does not go through the regulator. So the test was performed with the supply voltage varied between 85 % and 115% of the nominal rated supply voltage (DC 12 V) and the variation of the input power does not affect the test result, therefore the EUT complies with the requirement.

#### FCC Part 15.203 Antenna requirement

It is impossible for end users to replace the antenna, because the antenna is mounted inside of the EUT. Therefore, the equipment complies with the antenna requirement of Section 15.203.

#### **3.3** Addition to standard

| Item                           | Test Procedure          | Specification        | Remarks      | Deviation | Worst margin | Results |
|--------------------------------|-------------------------|----------------------|--------------|-----------|--------------|---------|
| 99 % Occupied Bandwidth        | RSS-Gen 6.7             | -                    | Radiated     | N/A       | N/A          | -       |
| Other than above no addition a | exclusion nor deviation | n has been made from | the standard |           |              |         |

Other than above, no addition, exclusion nor deviation has been made from the standard.

#### 3.4 Uncertainty

There is no applicable rule of uncertainty in this applied standard. Therefore, the results are derived depending on whether or not laboratory uncertainty is applied.

The following uncertainties have been calculated to provide a confidence level of 95 % using a coverage factor k=2.

| Test Item               |                      | Frequency range     |              | Uncertainty |

## SECTION 5: Radiated emission (Fundamental and Spurious Emission)

#### **Test Procedure**

EUT was placed on a urethane platform of nominal size, 1.0 m by 1.5 m, raised 0.8 m above the conducting ground plane. The Radiated Electric Field Strength has been measured in a Semi Anechoic Chamber with a ground plane.

#### Frequency: From 9 kHz to 30 MHz

The EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity. The measurements were performed for vertical polarization (antenna angle: 0 deg., 45 deg., 90 deg., and 135 deg.) and horizontal polarization.

\*Refer to Figure 1 about Direction of the Loop Antenna.

#### Frequency: From 30 MHz to 1 GHz

The measuring antenna height varied between 1 and 4 m and EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity.

The measurements were performed for both vertical and horizontal antenna polarization.

The test was made with the detector (RBW/VBW) in the following table.

When using Spectrum analyzer, the test was made with adjusting span to zero by using peak hold.

#### Test Antennas are used as below;

| rese miteminus ure used us below, |              |                   |                  |
|-----------------------------------|--------------|-------------------|------------------|
| Frequency                         | Below 30 MHz | 30 MHz to 200 MHz | 200 MHz to 1 GHz |
| Antenna Type                      | Loop         | Biconical         | Logperiodic      |

| Frequency       | From 9 kHz to<br>90 kHz<br>and<br>From 110 kHz to<br>150 kHz | From 90 kHz to<br>110 kHz | From 150 kHz to<br>490 kHz | From 490 kHz to<br>30 MHz | From 30 MHz to<br>1 GHz |
|-----------------|--|---------------------------|----------------------------|---------------------------|-------------------------|
| Instrument used | Test Receiver  |                           |                            |                           |                         |
| Detector        | PK / AV  | QP                        | PK / AV                    | QP                        | QP                      |
| IF Bandwidth    | 200 Hz   | 200 Hz                    | 9 kHz                      | 9 kHz                     | 120 kHz                 |
| Test Distance   | 3 m *1)  | 3 m *1)                   | 3 m *1)                    | 3 m *2)                   | 3 m                     |

\*1) Distance Factor: 40 x log (3 m / 300 m) = -80 dB

\*2) Distance Factor:  $40 \times \log (3 \text{ m} / 30 \text{ m}) = -40 \text{ dB}$ 

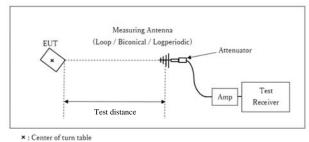

Although these tests were performed other than open field test site, adequate comparison measurements were confirmed against 30 m open field test site. Therefore, sufficient tests were made to demonstrate that the alternative site produces results that correlate with the ones of tests made in an open field based on KDB 414788.

These tests were performed in semi anechoic chamber. Therefore, the measured level of emissions may be higher than if measurements were made without a ground plane.

However, test results were confirmed to pass against standard limit.

The limits in CFR 47, Part 15, Subpart C, paragraph 15.209(a), are identical to those in RSS-Gen section 8.9, Table 6, since the measurements are performed in terms of magnetic field strength and converted to electric field strength levels (as reported in the table) using the free space impedance of 377 Ohmes. For example, the measurement at frequency 9 kHz resulted in a level of 45.5 dBuV/m, which is equivalent to 45.5 - 51.5 = -6.0 dBuA/m, which has the same margin, 3 dB, to the corresponding RSS-Gen Table 6 limit as it has to 15.209(a) limit.

#### [Test Setup] Below 1 GHz

Test Distance: 3 m

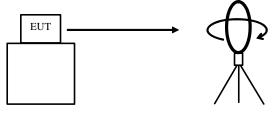

- The carrier level and noise levels were confirmed at each position of X, Y and Z axes of EUT to see the position of maximum noise, and the test was made at the position that has the maximum noise.

The test results and limit are rounded off to one decimal place, so some differences might be observed.

Result = Reading + Ant Factor + Loss (Cable+Attenuator) - Gain(Amprifier)

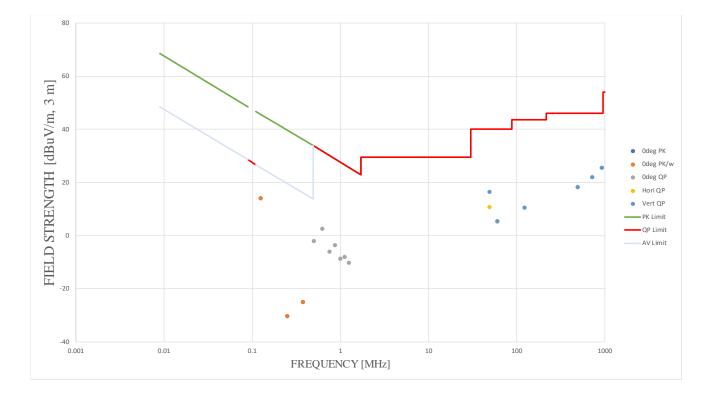

It was confirmed that there was no difference by the input voltage in the spurious emission. The pre-amplifier used for carrier frequency measurement was not saturated. Other frequency noises omitted in this report were not seen or had enough margin (more than 20 dB).

\*Hyphens for Last Calibration Date and Cal Int (month) are instruments that Calibration is not required (e.g. software), or instruments checked in advance before use.

The expiration date of the calibration is the end of the expired month.

As for some calibrations performed after the tested dates, those test equipment have been controlled by means of an unbroken chains of calibrations.

All equipment is calibrated with valid calibrations. Each measurement data is traceable to the national or international standards.

Test item: RE: Radiated Emission
