

## **RF Exposure Statement**

### **1. Standard Applicable**

According to 1.1307 (b)(1), systems operating under the provisions of this section shall be operated in a manner that ensure that the public is not exposed to radio frequency energy level in excess of the Commission's guideline.

This is a portable device.

### **2. Measurement Result:**

This is a portable device and the max peak output power is 11.04 dBm (12.7 mW).

This was measured at 2412 MHz

Lower than the low threshold  $60/f$  GHz = (24.88 mW),  
 $d < 2.5$  cm general population category.

The SAR measurement is not necessary.

#### **NOTE:**

To determine the worst case level to be use for the RF exposure statement, when possible we will make RF conducted at the antenna terminal measurements and EIRP measurements. The higher of the two measurements will be used. If using the RF conducted method, the antenna gain is added.
