

ENGINEERING TEST REPORT

UHF Bi-Directional Amplifier
Model: UBDA4551
FCC ID: WDM-UBDA4551

Applicant:

Comprod Communications Ltd
3405 North Benzing Road
Orchard Park, NY 14127
USA

Tested in Accordance With

Federal Communications Commission (FCC)
47 CFR, Parts 2 & 90

UltraTech's File No.: CMPR-008F90

This Test report is Issued under the Authority of
Tri M. Luu
Vice President of Engineering
UltraTech Group of Labs

Date: August 16, 2012

Report Prepared by: Dan Huynh

Tested by: Mr. Wei Wu

Issued Date: August 16, 2012

Test Dates: June 14 ~ August 24, 2011

- *The results in this Test Report apply only to the sample(s) tested, and the sample tested is randomly selected.*
- *This report must not be used by the client to claim product endorsement by NVLAP or any agency of the US Government.*

EXHIBIT 1. INTRODUCTION

1.1. SCOPE

| | |
|-------------------------|--|
| Reference: | FCC Part 2 & 90 |
| Title: | Telecommunication - Code of Federal Regulations, CFR 47, Part 2 & 90 |
| Purpose of Test: | To gain FCC Certification Authorization for Radio Amplifier operating in the Frequency Range 450 - 512 MHz |
| Test Procedures: | Both conducted and radiated emissions measurements were conducted in accordance with American National Standards Institute ANSI C63.4 - American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz. |

1.2. RELATED SUBMITTAL(S)/GRANT(S)

None.

1.3. NORMATIVE REFERENCES

| Publication | Year | Title |

2.2. EQUIPMENT UNDER TEST (EUT) INFORMATION

The following information (with the exception of the Date of Receipt) has been supplied by the applicant.

| | |
|---|---|
| Brand Name: | Comprod Communications Ltd |
| Product Name: | UHF Bi-Directional Amplifier |
| Model Name or Number: | UBDA4551 |
| Serial Number: | Test Sample |
| Type of Equipment: | Booster |
| Power Supply Requirement: | 100-260 VAC 50 / 60 Hz |
| Transmitting/Receiving Antenna Type: | Non-Integral |
| Primary User Functions of EUT: | Extends RF coverage area of radio communications indoor/outdoor environments. |

2.3. EUT'S TECHNICAL SPECIFICATIONS

| Transmitter | |
|--|--|
| Equipment Type: | Base station (fixed use) |
| Intended Operating Environment: | Commercial, Light Industry & Heavy Industry |
| RF Output Power Rating (Conducted): | Single output: 32.5 dBm or 1.778 Watts |
| Operating Frequency Range: | Uplink band: 450 - 512 MHz Downlink band: 450 - 512 MHz |
| RF Input/Output Impedance: | 50 Ohm |
| Nominal Gain (at -40dBm input power): | 76 dB maximum |
| Occupied Bandwidth (99%): | Booster |
| Emission Designation: | F3E, F1D |
| Antenna Connector Type: | SMA |
| Antenna Description: | Antenna gain: 3.5 dBd maximum |

| Receiver | |
|--|--|
| Equipment Type: | Base station (fixed use) |
| Intended Operating Environment: | Commercial, Light Industry & Heavy Industry |
| Power Supply Requirement: | 100-260 VAC 50 / 60 Hz |
| RF Input Power Rating: | Single input: -40 dBm nominal |
| Operating Frequency Range: | Uplink band: 450 - 512 MHz Downlink band: 450 - 512 MHz |

2.4. LIST OF EUT'S PORTS

| Port Number | EUT's Port Description | Number of Identical Ports | Connector Type | Cable Type (Shielded/Non-shielded) |
|--------------------|-------------------------------|----------------------------------|-----------------------------------|---|
| 1 | AC power input | 1 | RCPT waterproof 3 positions, male | Non-shielded |
| 2 | D/L VGA IN | 1 | SMA female | Shielded |
| 3 | D/L VGA OUT | 1 | SMA female | Shielded |
| 4 | D/L PA IN | 1 | SMA female | Shielded |
| 5 | D/L PA OUT | 1 | SMA female | Shielded |
| 6 | U/L VGA IN | 1 | SMA female | Shielded |
| 7 | U/L VGA OUT | 1 | SMA female | Shielded |
| 8 | U/L PA IN | 1 | SMA female | Shielded |
| 9 | U/L PA OUT | 1 | SMA female | Shielded |

File #: CMPR-008F90
 August 16, 2012

- All test results contained in this engineering test report are traceable to National Institute of Standards and Technology (NIST)

2.5. ASSOCIATED EQUIPMENT

None.

2.6. ANCILLARY EQUIPMENT

N/A

2.7. DRAWING OF TEST SETUP

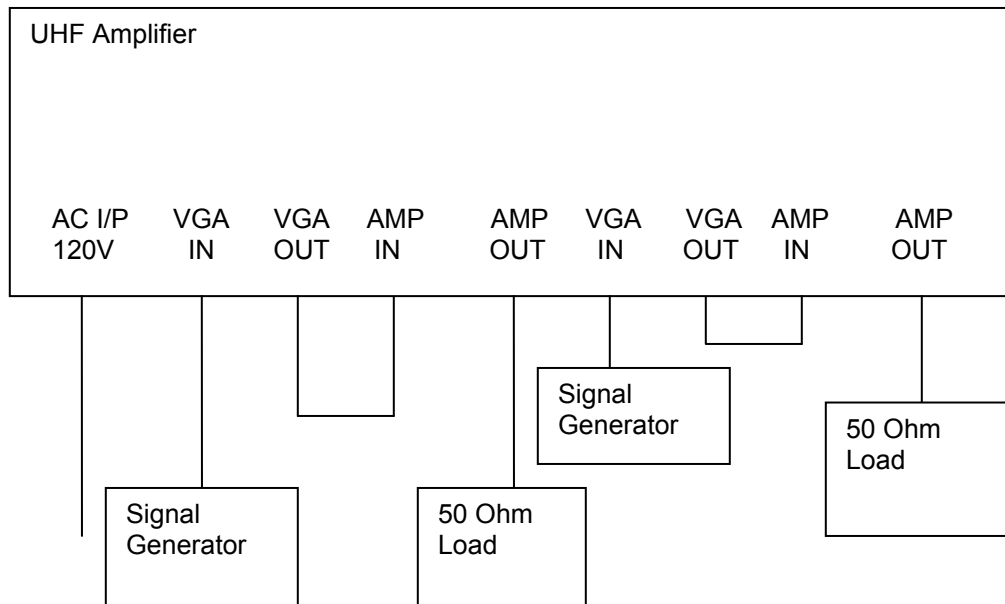

EXHIBIT 3. EUT OPERATING CONDITIONS AND CONFIGURATIONS DURING TESTS

3.1. CLIMATE TEST CONDITIONS

The climate conditions of the test environment are as follows:

| | |
|---------------------|----------------|
| Temperature: | 22°C |
| Humidity: | 54% |
| Pressure: | 100 kPa |
| Power input source: | 120 VAC, 60 Hz |

3.2. OPERATIONAL TEST CONDITIONS & ARRANGEMENT FOR TEST SIGNALS

| | |
|----------------------------------|--|
| Operating Modes: | The amplifier was operated in a continuous transmission mode with the carrier modulated as specified in the Test Data. |
| Special Test Software: | N/A |
| Special Hardware Used: | N/A |
| Transmitter Test Antenna: | The EUT is tested with the amplifier antenna ports terminated to a 50 Ohm RF Load. |

| Transmitter Test Signals | |
|---|--------------------------|
| Frequency Band(s): | 450 - 512 MHz |
| Frequency(ies) Tested: (Near lowest, near middle & near highest frequencies in the frequency range of operation.) | 451, 469.9 and 511.9 MHz |
| Transmitter Wanted Output Test Signals: | |
| Transmitter Power (measured maximum output power): | 32.40 dBm |
| Normal Test Modulation: | F3E, F1D |
| Modulating signal source: | External |

EXHIBIT 4. SUMMARY OF TEST RESULTS

4.1. LOCATION OF TESTS

All of the measurements described in this report were performed at Ultratech Group of Labs located in the city of Oakville, Province of Ontario, Canada.

- AC Power Line Conducted Emissions were performed in UltraTech's shielded room, 24'(L) by 16'(W) by 8'(H).
- Radiated Emissions were performed at the Ultratech's 3-10 TDK Semi-Anechoic Chamber situated in the Town of Oakville, province of Ontario. This test site been calibrated in accordance with ANSI C63.4, and found to be in compliance with the requirements of Sec. 2.948 of the FCC Rules. The descriptions and site measurement data of the Oakville 3-10 TDK Semi-Anechoic Chamber has been filed with FCC office (FCC File No.: 91038) and Industry Canada office (Industry Canada File No.: 2049A-3). Expiry Date: 2014-04-04.

4.2. APPLICABILITY & SUMMARY OF EMC EMISSION TEST RESULTS

| FCC Section(s) | Test Requirements | Compliance (Yes/No) |
|----------------------------|---|---------------------|
| 15.107(b) | AC Power Line Conducted Emissions | Yes |
| 2.1046 & 90.219 | RF Power Output & Inter-modulation | Yes |
| 1.1307, 1.1310, 2.1091 | RF Exposure Limit | Yes |
| 2.1055 & 90.213 | Frequency Stability | N/A for Amplifier |
| 2.1047(a) | Audio Frequency Response | N/A for Amplifier |
| 2.1047(b) & 90.210 | Modulation Limiting | N/A for Amplifier |
| 2.1049 | Occupied Bandwidth | Yes |
| 2.1051, 2.1057 & 90.210 | Spurious Emissions at Antenna Terminals | Yes |
| 2.1051, 2.1057 & 90.210 | Field Strength of Spurious Radiation | Yes |

4.3. MODIFICATIONS INCORPORATED IN THE EUT FOR COMPLIANCE PURPOSES

None.

4.4. DEVIATION OF STANDARD TEST PROCEDURES

None.

- All test results contained in this engineering test report are traceable to National Institute of Standards and Technology (NIST)

EXHIBIT 5. TEST DATA

Remark:

The amplification chain for Downlink band and Uplink band are identical, each chain consists of an identical VGA unit and an identical Power Amplifier unit. The the following test results will represents worst-case test configuration for both Downlink and Uplink bands.

5.1. POWER LINE CONDUCTED EMISSIONS [[§ 15.107(b)]]

5.1.1. Limits

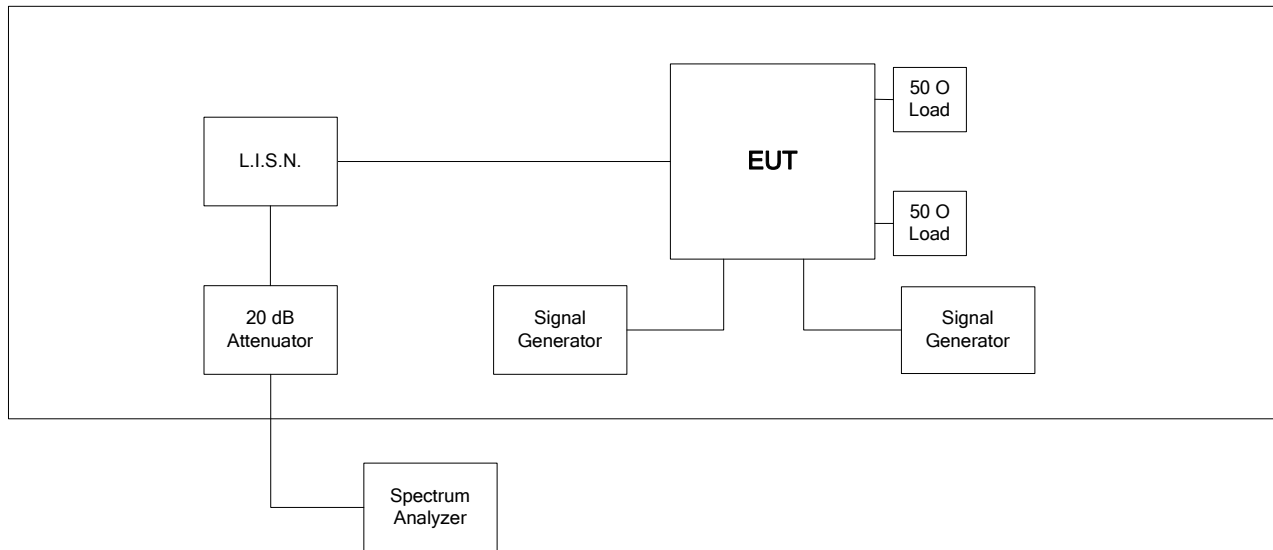

The equipment shall meet the limits of the following table:

| Frequency of emission (MHz) | Conducted Limits (dBµV) | |
|-----------------------------|-------------------------|---------|
| | Quasi-peak | Average |
| 0.15 - 0.5 | 79 | 66 |
| 0.5 - 30 | 73 | 60 |

5.1.2. Method of Measurements

Refer to Ultratech Test Procedures ULTR-P001-2004 & ANSI C63.4 for method of measurements.

5.1.3. Test Arrangement

5.1.4. Test Data

Plot 5.1.4.1. Power Line Conducted Emissions
 Line Voltage: 120 VAC 60 Hz, Line Tested: Hot

Plot 5.1.4.2. Power Line Conducted Emissions
 Line Voltage: 120 VAC 60 Hz, Line Tested: Neutral

ULTRATECH GROUP OF LABS

3000 Bristol Circle, Oakville, Ontario, Canada L6H 6G4
 Tel. #: 905-829-1570, Fax. #: 905-829-8050, Email: vic@ultratech-labs.com, Website: <http://www.ultratech-labs.com>

File #: CMPR-008F90
 August 16, 2012

▪ All test results contained in this engineering test report are traceable to National Institute of Standards and Technology (NIST)

5.2. RF POWER OUTPUT [§§ 2.1046 and 90.205]

5.2.1. Limits

Refer to FCC 47 CFR § 90.205 for specification details and § 90.219.

Licensees authorized to operate radio systems in the frequency bands above 150 MHz may employ signal boosters at fixed locations in accordance with the following criteria:

(a) The amplified signal is retransmitted only on the exact frequency(ies) of the originating base, fixed, mobile, or portable station(s). The booster will fill in only weak signal areas and cannot extend the system's normal signal coverage area.

(b) Class A narrowband signal boosters must be equipped with automatic gain control circuitry which will limit the total effective radiated power (ERP) of the unit to a maximum of 5 watts under all conditions. Class B broadband signal boosters are limited to 5 watts ERP for each authorized frequency that the booster is designed to amplify.

5.2.2. Method of Measurements

ANSI/TIA-603-C-2004

5.2.3. Test Arrangement

5.2.4. Test Data

Remark: The maximum antenna gain to be used with this device is 3.5 dBd.

| Test Frequency (MHz) | Channel Spacing (kHz) | Input Power (dBm) | VGA Input Level Adjustment Setting | VGA Output Power Setting | Total RF Output Power at Antenna Port | |
|----------------------|-----------------------|-------------------|------------------------------------|--------------------------|---------------------------------------|--------|
| | | | | | (dBm) | (Watt) |
| 451 | 6.25 | -39.63 | 0 | 9 | 28.27 | 0.671 |
| | 12.5 | -39.90 | 0 | 7 | 30.01 | 1.002 |
| | 25 | -39.90 | 0 | 6 | 31.06 | 1.276 |
| 469.9 | 6.25 | -40.22 | 0 | B | 28.02 | 0.634 |
| | 12.5 | -40.22 | 0 | 8 | 30.61 | 1.151 |
| | 25 | -40.22 | 0 | 6 | 32.40 | 1.738 |
| 511.9 | 6.25 | -40.40 | 0 | B | 27.11 | 0.514 |
| | 12.5 | -39.46 | 0 | 9 | 29.26 | 0.843 |
| | 25 | -39.46 | 0 | 8 | 30.28 | 1.067 |

▪ All test results contained in this engineering test report are traceable to National Institute of Standards and Technology (NIST)

5.3. OCCUPIED BANDWIDTH [§ 2.1049]

5.3.1. Limits

The spectral shape of the output should look similar to input for all modulations.

5.3.2. Method of Measurements

The measurement procedure shall be as follows:

Step 1:

- Connect the EUT to the spectrum analyzer and use the following settings:

Span: the minimum span to fully display the emission
Resolution BW: 300 Hz or 1% of the approximate emission width
Video BW: 3 times the Resolution BW or greater
Video Averaging: none
Sweep time: coupled or set to a slower rate

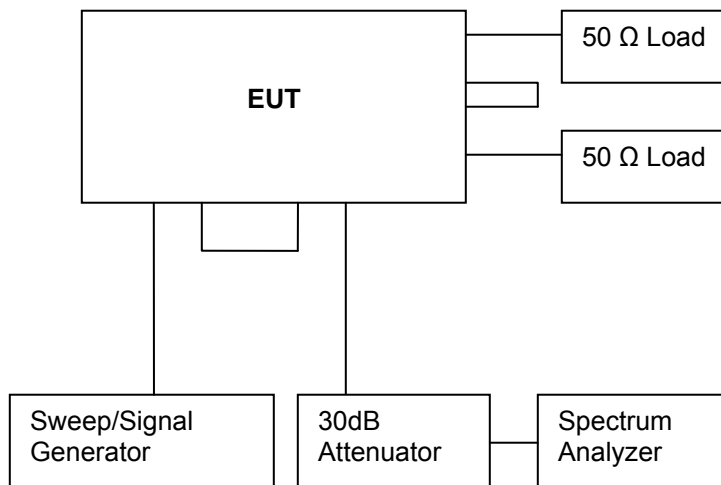

Step 2:

- When the trace is complete, capture the trace.
- Find the peak value of the trace and place the analyzer marker on this peak.

Step 3:

- Use the 99 % bandwidth function of the spectrum analyzer to measure the occupied bandwidth of the EUT. This value shall be recorded.

5.4. SPURIOUS EMISSIONS AT ANTENNA TERMINAL AND INTERMODULATION [§§ 2.1051, 2.1057 & 90.210]

5.4.1. Limits

§ 90.219 (c) Class A narrowband boosters must meet the out-of-band emission limits of § 90.210 for each narrowband channel that the booster is designed to amplify. Class B broadband signal boosters must meet the emission limits of § 90.210 for frequencies outside of the booster's designed passband.

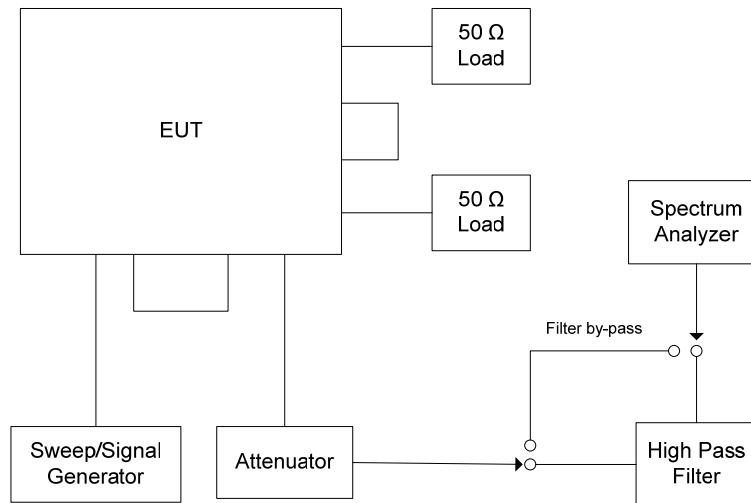

KDB 935210 - FCC guidelines for testing amplifiers, boosters and repeater:
Intermodulation limit: -13dBm conducted.

5.4.2. Method of Measurements

TIA-603-C.

5.4.3. Test Arrangement

Single Channel Input:

Multiple Channel Inputs:

5.5. TRANSMITTER SPURIOUS/HARMONIC RADIATED EMISSIONS [§§ 90.210, 2.1057 & 2.1051]

5.5.1. Limits

§ 90.219 (c) Class A narrowband boosters must meet the out-of-band emission limits of § 90.210 for each narrowband channel that the booster is designed to amplify. Class B broadband signal boosters must meet the emission limits of § 90.210 for frequencies outside of the booster's designed passband.

5.5.2. Method of Measurements

The test shall be performed using substitution method specified in TIA-603-C.

5.5.3. Test Arrangement

5.5.4. Test Data

Remarks:

- The RF spurious/harmonic emission characteristics for different channel spacing are similar. Therefore, the following radiated emissions were performed at 25 kHz channel spacing and the results were compared with the more stringent limit for the worst-case.
- The radiated emissions were performed at high power setting with single RF input signal at 3 m distance to represents the worst-case test configuration.
- The emissions were scanned from at least 30 MHz to 10th harmonics; all spurious emissions that are in excess of 20dB below the specified limit shall be recorded.

5.5.4.1. Near Lowest Frequency (451 MHz)

| Test Frequency (MHz): | | 451 | | | | |
|--|------------------|------------------------|----------------------------|--------------------|-------------|-------------|
| Limit (dBm): | | -25 | | | | |
| Frequency (MHz) | E-Field (dBµV/m) | EMI Detector (Peak/QP) | Antenna Polarization (H/V) | ERP measured (dBm) | Limit (dBm) | Margin (dB) |
| 30-6000 | * | Peak | V/H | * | -25 | * |
| * Spurious emissions are more than 20dB below the specified limit. | | | | | | |

5.5.4.2. Near Middle Frequency (469.9 MHz)

| Test Frequency (MHz): | | 469.9 | | | | |
|--|------------------|------------------------|----------------------------|--------------------|-------------|-------------|
| Limit (dBm): | | -25 | | | | |
| Frequency (MHz) | E-Field (dBµV/m) | EMI Detector (Peak/QP) | Antenna Polarization (H/V) | ERP measured (dBm) | Limit (dBm) | Margin (dB) |
| 30-6000 | * | Peak | V/H | * | -25 | * |
| * Spurious emissions are more than 20dB below the specified limit. | | | | | | |

5.5.4.3. Near Highest Frequency (511.9 MHz)

| Test Frequency (MHz): | | 511.9 | | | | |
|--|------------------|------------------------|----------------------------|--------------------|-------------|-------------|
| Limit (dBm): | | -25 | | | | |
| Frequency (MHz) | E-Field (dBµV/m) | EMI Detector (Peak/QP) | Antenna Polarization (H/V) | ERP measured (dBm) | Limit (dBm) | Margin (dB) |
| 30-6000 | * | Peak | V/H | * | -25 | * |
| * Spurious emissions are more than 20dB below the specified limit. | | | | | | |

5.6. RF EXPOSURE REQUIRMENTS @ 1.1310 & 2.1091

The criteria listed in the following table shall be used to evaluate the environmental impact of human exposure to radio-frequency (RF) radiation.

FCC 47 CFR § 1.1310:

TABLE 1—LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

| Frequency range (MHz) | Electric field strength (V/m) | Magnetic field strength (A/m) | Power density (mW/cm ²) | Averaging time (minutes) |
|--|-------------------------------|-------------------------------|-------------------------------------|--------------------------|
| (A) Limits for Occupational/Controlled Exposures | | | | |
| 0.3–3.0 | 614 | 1.63 | *(100) | 6 |
| 3.0–30 | 1842/f | 4.89/f | *(900/f ²) | 6 |
| 30–300 | 61.4 | 0.163 | 1.0 | 6 |
| 300–1500 | | | f/300 | 6 |
| 1500–100,000 | | | 5 | 6 |
| (B) Limits for General Population/Uncontrolled Exposure | | | | |
| 0.3–1.34 | 614 | 1.63 | *(100) | 30 |
| 1.34–30 | 824/f | 2.19/f | *(180/f ²) | 30 |
| 30–300 | 27.5 | 0.073 | 0.2 | 30 |
| 300–1500 | | | f/1500 | 30 |
| 1500–100,000 | | | 1.0 | 30 |

f = frequency in MHz

* = Plane-wave equivalent power density

NOTE 1 TO TABLE 1: Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure.

NOTE 2 TO TABLE 1: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or can not exercise control over their exposure.

5.6.1. Method of Measurements

Refer to Sections 1.1310, 2.1091

In order to demonstrate compliance with MPE requirements (see Section 2.1091), the following information is typically needed:

- (1) Calculation that estimates the minimum separation distance (20 cm or more) between an antenna and persons required to satisfy power density limits defined for free space.
- (2) Antenna installation and device operating instructions for installers (professional/unskilled users), and the parties responsible for ensuring compliance with the RF exposure requirement
- (3) Any caution statements and/or warning labels that are necessary in order to comply with the exposure limits
- (4) Any other RF exposure related issues that may affect MPE compliance

Calculation Method of RF Safety Distance:

$$S = \frac{P \cdot G}{4 \cdot \pi \cdot r^2} = \frac{EIRP}{4 \cdot \pi \cdot r^2}$$

Where: P: power input to the antenna in mW
 EIRP: Equivalent (effective) isotropic radiated power
 S: power density mW/cm²
 G: numeric gain of antenna relative to isotropic radiator
 r: distance to centre of radiation in cm

5.6.2. RF Evaluation

| EVALUATION OF RF EXPOSURE COMPLIANCE REQUIREMENTS | |
|--|---|
| RF Exposure Requirements | Compliance with FCC Rules |
| Minimum calculated separation distance between antenna and persons required: *46.7 cm | Manufacturer’ instruction for separation distance between antenna and persons required: 66 cm. |
| Antenna installation and device operating instructions for installers (professional/unskilled users), and the parties responsible for ensuring compliance with the RF exposure requirement | Antenna installation and device operating instructions shall be provided to installers to maintain and ensure compliance with RF exposure requirements. |
| Caution statements and/or warning labels that are necessary in order to comply with the exposure limits | Refer to User’s Manual for RF Exposure Information. |
| Any other RF exposure related issues that may affect MPE compliance | None. |

*The minimum separation distance between the antenna and bodies of users are calculated using the following formula:

$$r = \sqrt{\frac{P \cdot G}{4 \cdot \pi \cdot S}} = \sqrt{\frac{EIRP}{4 \cdot \pi \cdot S}}$$

S = 450/1500 mW/cm²

EIRP = P_(Max. ERP permitted) + 2.15 dB = 37 dBm + 2.15 dB = 39.15 dBm = 8222 mW (Worst Case)

(Minimum Safe Distance, r) = $\sqrt{\frac{EIRP}{4 \cdot \pi \cdot S}} = \sqrt{\frac{8222}{4 \cdot \pi \cdot (450 / 1500)}} \approx 46.7cm$

EXHIBIT 7. MEASUREMENT UNCERTAINTY

The measurement uncertainties stated were calculated in accordance with the requirements of CISPR 16-4-2 @ IEC:2003 and JCGM 100:2008 (GUM 1995) – Guide to the Expression of Uncertainty in Measurement.

7.1. LINE CONDUCTED EMISSION MEASUREMENT UNCERTAINTY

| | Line Conducted Emission Measurement Uncertainty (150 kHz – 30 MHz): | Measured | Limit |
|----------------------|--|---------------|--------------|
| u_c | Combined standard uncertainty: $u_c(y) = \sqrt{\sum_{i=1}^m u_i^2(y)}$ | ± 1.57 | ± 1.8 |
| U | Expanded uncertainty U: $U = 2u_c(y)$ | ± 3.14 | ± 3.6 |

7.2. RADIATED EMISSION MEASUREMENT UNCERTAINTY

| | Radiated Emission Measurement Uncertainty @ 3m, Horizontal (30-1000 MHz): | Measured | Limit |
|----------------------|--|---------------|--------------|
| u_c | Combined standard uncertainty: $u_c(y) = \sqrt{\sum_{i=1}^m u_i^2(y)}$ | ± 2.15 | ± 2.6 |
| U | Expanded uncertainty U: $U = 2u_c(y)$ | ± 4.30 | ± 5.2 |

| | Radiated Emission Measurement Uncertainty @ 3m, Vertical (30-1000 MHz): | Measured | Limit |
|----------------------|--|---------------|--------------|
| u_c | Combined standard uncertainty: $u_c(y) = \sqrt{\sum_{i=1}^m u_i^2(y)}$ | ± 2.39 | ± 2.6 |
| U | Expanded uncertainty U: $U = 2u_c(y)$ | ± 4.78 | ± 5.2 |

| | Radiated Emission Measurement Uncertainty @ 3 m, Horizontal & Vertical (1 – 18 GHz): | Measured | Limit |
|----------------------|--|---------------|---------------------|
| u_c | Combined standard uncertainty: $u_c(y) = \sqrt{\sum_{i=1}^m u_i^2(y)}$ | ± 1.87 | Under consideration |
| U | Expanded uncertainty U: $U = 2u_c(y)$ | ± 3.75 | Under consideration |
