

TEST REPORT

Report No. : LK233414(6) Date : 2008-12-18

Application No. : AK044216-001

Applicant : Playmind Limited
Room 413-415, Houston Centre,
63 Mody Road,
Tsim Sha Tsui, Kowloon,
Hong Kong

Sample Description : One(1) submitted sample(s) stated to be R/C Transbotix
of Model No. 57623, 57624 and 57625
Radio Frequency : 49.860MHz Receiver
Rating : 4 x 1.5V AAA size batteries
No. of submitted sample : One (1) piece(s) ***

Date Received : 2008-11-12

Test Period : 2008-11-12 to 2008-11-24

Test Requested : FCC Part 15 Certification.

Test Method : 47 CFR Part 15 (10-1-07 Edition)
ANSI C63.4 – 2003

Test Result : See attached sheet(s) from page 2 to 11.

Conclusion : The submitted sample was found to comply with requirement of FCC Part 15
Subpart B.

Remark : All three models are the same in circuitry and components, and therefore model
57623 was chosen to be the representative of the test sample.

For and on behalf of
CMA Industrial Development Foundation Limited

TEST REPORT

Report No. : LK233414(6)

Date : 2008-12-18

1 General Information

1.1 General Description

The equipment under test (EUT) is a receiver for R/C Transbotix. It operates at 49.860MHz and the oscillation of radio control is generated by a LRC circuit. The EUT is powered by 4 x 1.5V AAA size batteries. When it switched On and received a radio control signal, it will be running to corresponding direction.

The brief circuit description is listed as follows:

- Q15 and associated circuit act as a RF receiver.
- RX2 and associated circuit act as a decoder.
- Q7-Q14, Q16-Q17 and associated circuit act as a driver of M2.
- Q1-Q6, Q18-Q21 and associated circuit act as a driver of M1.

TEST REPORT

Report No. : LK233414(6)

Date : 2008-12-18

1.2 Location of the test site

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2003. A Semi-Anechoic Chamber Testing Site is set up for investigation and located at:

Ground Floor, Yan Hing Centre,
9 – 13 Wong Chuk Yeung Street,
Fo Tan, Shatin,
New Territories,
Hong Kong.

Conducted emissions measurements are investigated and also taken pursuant to the procedures of ANSI C63.4 – 2003. A shielded room is located at :

Ground Floor, Yan Hing Centre,
9 – 13 Wong Chuk Yeung Street,
Fo Tan, Shatin,
New Territories,
Hong Kong.

Date : 2008-12-18

2 Description of the radiated emission test

2.1 Test Procedure

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2003.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

For below 30MHz, a loop antenna with its vertical plane is placed 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1 m above the ground.

A signal generator was used to radiate an unmodulated continuous wave (CW) signal to the EUT (superregenerative receiver) at its operating frequency in order to “cohere” the characteristic broadband emissions from the receiver.

2.2 Test Result

The frequencies from 30MHz to 1000MHz were investigated, and emissions more 20dB below limited were not reported. Thus, those higher emissions were presented in next page (section 2.3)

The emissions meeting the requirement of section 15.109 are based on measurements employing the CISPR quasi-peak detector below 1000MHz and average detector for frequencies above 1000MHz.

The frequencies from 30MHz to 1000MHz were investigated, and emissions more 20dB below limited were not reported. Thus, those higher emissions were presented in next page (section 2.3)

It was found that the EUT meet the FCC requirement.

TEST REPORT

Report No. : LK233414(6)

Date : 2008-12-18

3 Description of the Line-conducted Test

3.1 Test Procedure

Conducted emissions measurements are investigated and also taken pursuant to the procedures of ANSI C63.4 – 2003. The EUT was setup as described in the procedures, and both lines were measured.

3.2 Test Result

No measurement is required as the EUT is a battery-operated product.

3.3 Graph and Table of Conducted Emission Measurement Data

Not Applicable

TEST REPORT

Report No. : LK233414(6)
