TEST REPORT

Report No. : AK020519-001

Date : 2008-07-09

1 General Information

1.1 General Description

The equipment under test (EUT) is a transmitter for U-boat. It operates at 27.145MHz and the oscillation of radio control is generated by a crystal. The EUT is powered by 1 x 9V size batery. There are six buttons on the EUT. When the forward, dive or float button is pressed, it will transmit different radio control signal to the receiver..

The antenna terminal is using unique connector and the radio output power is unable to adjust.

The brief circuit description is listed as follows:

- Q1 and associated circuit act as a RF amplifier.
- Y1, Q2 and associated circuit act as an oscillator.
- U1 and associated circuit act as an encoder.

2 Description of the radiated emission test

2.1 Test Procedure

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2003.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

For below 30MHz, a loop antenna with its vertical plane is placed 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1 m above the ground.

The device was rotated through three orthogonal axes to determine which attitude and configuration produce the highest emission during measurement.

2.2 Test Result

Peak Detector data was measured unless otherwise stated.

“#” means emissions appearing within the restricted bands shall follow the requirement of section 15.205.

It was found that the EUT meet the FCC requirement.

3 Description of the Line-conducted Test

3.1 Test Procedure

Conducted emissions measurements are investigated and also taken pursuant to the procedures of ANSI C63.4 – 2003. The EUT was setup as described in the procedures, and both lines were measured.

3.2 Test Result

No measurement is required as the EUT is a battery-operated product.

Block Diagram	BlkDia.pdf
Schematic Diagram	Schem.pdf
Users Manual	UserMan.pdf
Operational Description	OpDes.pdf

5.1 Bandwidth

The plot on saved in TestRpt2.pdf shows the fundamental emission is confined in the specified band. It also shows that the band edge met the 15.209 requirement at 26.9599 and 27.2801 MHz.

5.2 Duty cycle

The duty cycle is simply the on-time divided by the period:

$$\text{The duration of one cycle} = 35.28\text{ms}$$

$$\begin{aligned}\text{Effective period of the cycle} &= 1.66\text{ms} \times 6 + 0.56\text{ms} \times 10 \\ &= 15.56\text{ms}\end{aligned}$$

$$\begin{aligned}\text{Duty Cycle} &= 15.56\text{ms} / 35.28\text{ms} \\ &= 0.44\end{aligned}$$

Therefore, the average factor is found by $20 \log_{10} 0.44 = -7.1\text{dB}$
