## 1. Summary of test results

The test results apply exclusively to the test samples as presented in this Report. The CETECOM GmbH does not assume responsibility for any conclusions and generalizations taken in conjunction with other specimens or samples of the type of the item presented to tests.

The presented <u>Equipment Under Test</u> (in this report, hereinafter referred as EUT) integrates a BLE 2.4 GHz RF Transceiver. Other implemented wireless technologies were not considered within this test report.

Following tests have been performed to show compliance with applicable FCC Part 2.1091 and FCC Part 1.1310 of the FCC CFR 47 Rules.

#### 1.1. Summary of tests results

RF-Exposure Evaluation (separation distance user to RF-radiating element greater 20cm)								
		References & Limits			гит			
Test cases	Port	FCC Standard	Test Limit	RSS Standard	Test Limit	EUT set-up	EUT op. mode	Result
Radio frequency radiation exposure Requirements	Cabinet	§1.1310 §2.1091 §2.1093	RF-Field Strength Limits: FCC: "general population/ uncontrolled" environment	RSS-102, Issue 5	Chapter 4 Table 4	1	1	Pass

Remark: Calculations based on Datasheet delivered by applicant

The current version of the Test Report **CETECOM\_TR19\_1\_0142201T07a\_C1** replaces the Test Report **CETECOM\_TR19\_1\_0142201T07a** dated 2020-02-13. The replaced test report is herewith invalid.

#### 1.2. Attestation

I declare that all measurements were performed by me or under my supervision and that all measurements have been performed and are correct to my best knowledge and belief to Industry Canada standards. All requirements as shown in above table are met in accordance with enumerated standards.

Volker Wittmann Responsible for test section

.....

Martin Nunier Responsible for test report

## 2. Administrative Data

## 2.1. Identification of the testing laboratory

Company name: Address:	CETECOM GmbH Im Teelbruch 116 45219 Essen - Kettwig Germany	
Responsible for testing laboratory:	Volker Wittmann	
Deputy:	Ninovic Perez	

C celecom

## 2.2. Test location

## 2.2.1. Test laboratory "CTC"

-		
Company name:	see chapter Identification of the testing laboratory	
company name.	boo chapter rachandater of the totaling raboratory	

## 2.3. Organizational items

Responsible for test report:	Martin Nunier
Receipt of EUT:	
Date(s) of test:	
Date of report:	2020-02-17

## 2.4. Applicant's details

Applicant's name:	GROHE AG
Address:	Industriepark Edelburg 58675, Hemer Germany
Contact person:	Mr Ralf Oberste-Lehn

## 2.5. Manufacturer's details

Manufacturer's name:	please see applicant's details
Address:	please see applicant's details

## 3. Equipment under test (EUT)

## 3.1. Technical data of main EUT (Non Cellular Technology) declared by applicant

Wireless Technologies	Frequency bands	Operation mode
WLAN	□2.4GHz □5GHz	
Bluetooth LE	2.4GHz	normal operation mode

Wireless Technologies	Frequency bands	Antenna type	Maximum antenna gain
□WLAN	⊠2.4GHz	⊠PIFA	see Annex 1
⊠Bluetooth/ BLE	□5GHz	□PCB	

## 3.2. EUT: Type, S/N etc. and short descriptions used in this test report

Short descrip- tion*)	EUT	Туре	S/N serial number	HW hardware status	FW software status
EUT A	Rainshower 310 SmartConnect (26646)	Remote Control	-	GH_RC-1V3	19072.3.1.0

\*) EUT short description is used to simplify the identification of the EUT in this test report.

## 3.3. Auxiliary Equipment (AE): Type, S/N etc. and short descriptions

AE short descrip- tion *)	Auxiliary Equipment	Туре	S/N serial number	HW hardware status	SW software status
AE 1					

\*) AE short description is used to simplify the identification of the auxiliary equipment in this test report.

## 3.4. EUT set-ups

EUT set-up no.*)	Combination of EUT and AE	Remarks					
set. 1	EUT A	only theoretical calculation					

\*) EUT set-up no. is used to simplify the identification of the EUT set-up in this test report.

## 3.5. EUT operating modes

EUT operating mode no.*)	Description of operating modes	Additional information
op. 1	BLE	Only theoretical calculation

\*) EUT operating mode no. is used to simplify the test report.

## 4. Measurements

### 4.1. Radio Frequency Exposure Evaluation §2.1091

#### 4.1.1. Test location and equipment (for reference numbers please see chapter 'List of test equipment')

test location	CETECOM Essen (Chapter.	2.2.1)	Chapter. 2.2.2	Please see Cha	pter. 2.2.3
	For Evaluation instruments are r	not needed. Results are deterr	mined by calculation based on	n applicants delivered	Tune-Up procedure.

#### 4.1.2. Requirements

FCC: §1.1310	The criteria used for the evaluation of human exposure to radio frequency radiation is table 1 according FCC §1.1310 and table chapter 4.2 of RSS-102 standard and it is subject for evaluation of the RF exposure prior to equipment authorization. As the mobile equipment is authorized under Part 22 (Subpart H) and Part 24 of the FCC Rules, it is subject for evaluation of the RF exposure prior to equipment authorization.
FCC § 2.1091	Further information on evaluating compliance with these limits can be found in the FCC's OST/OET Bulletin Number 65, "Evaluating Compliance with FCC-Specified Guidelines for Human Exposure to Radiofrequency Radiation." For purposes of these requirements mobile devices are defined by the FCC as transmitters designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 centimeters is normally maintained between radiating structures and the body of the user or nearby persons. These devices are normally evaluated for exposure potential with relation to the MPE limits given in Table 1 of Appendix A.

#### 4.1.2.1. Valid for FCC

Table 1: LIMITS FOR M	Table 1: LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)									
Frequency range	Electric field strength	Magnetic field strength	Power density	Averaging time						
[MHz)	[V/m]	[A/m]	[mW/cm <sup>2</sup> ]	[minutes]						
30 - 300	61.4	0.163	1.0	6						
300 - 1500	-		f/300	6						
1500 - 100,000	-		5	6						
	(B) Limits f	or General Population / Uncontrolled	Exposure							
0.3 – 1.34	614	1.63	*(100)	30						
1.34 – 30	824/f	2.19/f	*(180/f²)	30						
30 - 300	27.5	0.073	0.2	30						
300 - 1500	-	-	f/1500	30						
1500 – 100,0	-	-	1.0	30						

#### f=frequency in MHz

\*Plane-wave equivalent power density

NOTE1: Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure. These limits apply to amateur station licensees and members of their immediate household as discussed in the text.

NOTE2: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure. As discussed in the text, these limits apply to neighbours living near amateur radio stations.

#### 4.1.3. General Limits:

FCC: §1.1307	Cellular Radiotelephone Service (subpart H of part 22) Non-building-mounted antennas: height above ground level to lowest point of antenna < 10 m and total power of all channels > 1000 W ERP (1640 W EIRP)
FCC §1.1307	Personal Communications Services (part 24) Broadband PCS (subpart E): non-building-mounted antennas: height above ground level to lowest point of antenna < 10 m and total power of all channels > 2000 W ERP (3280 W EIRP)
FCC §1.1310	LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE) Table 1(B) Limits for General Population/Uncontrolled Exposure 300–1500 MHz: f/1500 mW/cm <sup>2</sup> 1500–100,000 MHz: 1.0 mW/cm <sup>2</sup>
FCC §2.1091	Subject to routine evaluation is required when the device operate at frequencies of 1.5 GHz or below and their effective radiated power (ERP) is 1.5 watts or more, or if they operate at frequencies above 1.5 GHz and their ERP is 3 watts or more.
FCC §24.232	<ul> <li>(a) Base stations are limited to 1640 watts peak equivalent isotropically radiated power (e.i.r.p.) with an antenna height up to 300 meters HAAT.</li> <li>b) Mobile/portable stations are limited to 2 watts e.i.r.p. peak power,</li> </ul>
FCC §22.913	(a) Maximum ERP. The effective radiated power (ERP) of base transmitters and cellular repeaters must not exceed 500 Watts. The ERP of mobile transmitters and auxiliary test transmitters must not exceed 7 Watts.
FCC §27.50 (C )(10)	(10) Portable stations (hand-held devices) are limited to 3 watts ERP; and
FCC §27.50(d)	(4) Fixed, mobile, and portable (hand-held) stations operating in the 1710-1755 MHz band are limited to 1 watt EIRP.
KDBs	No. 447498 D01 v06

## 4.2. Requirements and limits for RSS Standard

	2.5 Exemption Limits for Routine Evaluation
	All transmitters are exempt from routine SAR and RF exposure evaluations provided that they comply with the requirements of sections 2.5.1 or 2.5.2. If the equipment under test (EUT) meets the requirements of sections 2.5.1 or 2.5.2, applicants are only required to submit a properly signed declaration of compliance (see <u>Annex C</u> ). The information contained in the RF exposure technical brief may be limited to the value(s) of the maximum output power, the information that demonstrates how the maximum output power of the transmitter was derived and the rationale for the separation distances applied (see <u>Table 1</u> ), which must be based on the most conservative exposure condition for the applicable module or host platform test procedure requirements.
	2.5.2 Exemption Limits for Routine Evaluation — RF Exposure Evaluation
	RF exposure evaluation is required if the separation distance between the user and/or bystander and the device's radiating element is greater than 20 cm, except when the device operates as follows:
	<ul> <li>below 20 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 1 W (adjusted for tune-up tolerance);</li> </ul>
	<ul> <li>at or above 20 MHz and below 48 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 4.49/f<sup>0.5</sup> W (adjusted for tune-up tolerance), where f is in MHz;</li> </ul>
RSS-102, Issue 5	<ul> <li>at or above 48 MHz and below 300 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 0.6 W (adjusted for tune-up tolerance);</li> </ul>
	<ul> <li>at or above 300 MHz and below 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 1.31 x 10<sup>-2</sup> f<sup>0.6834</sup> W (adjusted for tune-up tolerance), where f is in MHz;</li> </ul>
	• at or above 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 5 W (adjusted for tune-up tolerance).
	In these cases, the information contained in the RF exposure technical brief may be limited to information that demonstrates how the e.i.r.p. was derived. <b>2.6 User Manual Requirements</b>
	The applicant is responsible for providing proper instructions to the user of the radio device, and any usage restrictions, including limits of exposure durations. The user manual shall provide installation and operation instructions, as well as any special usage conditions (e.g. proper accessory required, including the proper orientation of the device in the accessory, maximum antenna gain in the case of detachable antenna), in order to ensure compliance with SAR and/or RF field strength limits. For instance, compliance distance shall be clearly stated in the user manual.
	The user manual of devices intended for controlled use shall also include information relating to the operating characteristics of the device; the operating instructions to ensure compliance with SAR and/or RF field strength limits; information on the installation and operation of accessories to ensure compliance with SAR and/or RF field strength limits; and contact information where the user can obtain Canadian information on RF exposure and compliance. Other related information may also be included.

#### 4.3. MPE Calculation method

Predication of MPE limit at a given distance Equation from page 18 of OET Bulletin 65, Edition 97-01

$$S = \frac{EIRP}{4\pi R^2} = \frac{P * G}{4\pi R^2}$$

$$G_{NUMERIC} = \frac{S * 4\pi R^2}{P}$$

Where: S=power density

P=power input to antenna

G=power gain of the antenna in the direction of interest relative to an isotropic radiator R=distance to the centre of radiation of the antenna

## 4.4. Evaluation Method

#### 4.4.1. Standalone

#### Valid for Bluetooth LE:

- The peak power was checked on 3 frequencies (lowest/middle/highest) within the 2.4 GHz band
- No duty-cycle correction factor is applicable

Please find in the following tables the calculations based on applicants information

#### 4.5. Results for fixed and mobile operations

#### 4.5.1. Results for FCC Standard

#### 4.5.1.1. Results for 2.4 GHz Bluetooth LE

Operation Mode	channel	Declared maximum conducted output power	Max. positive tolerance according manfacturer	Antenna Gain	Declared maximum EIRP (Measured+ Tune-up)		Maximum EIRP	Equivalent EIRP (maximum EIRP x duty cycle)					Max. Fraction- Value within Frequency- Band
	(MHz)	(dBm)	(dB)	(dBi)	(dBm)	(%)	(W)	(mW)	(mW/cm^2)	(mW/cm^2)	(mW/cm^2)

Highest MPE value:	0.0028	[W/m^2]						
Lowest margin to limit	5.3508	[W/m^2]						

#### 4.5.2.2. Co-location assessment (scenario)

The measurement results comply with the ISED Limit per RSS-102, Issue 5 for the uncontrolled RF Exposure of mobile device.

#### 4.6. Measurement uncertainties

The reported uncertainties are calculated based on the standard uncertainty multiplied with the appropriate coverage factor **k**, such that a confidence level of approximately 95% is achieved.

For uncertainty determination, each component used in the concrete measurement set-up was taken in account and it's contribution to the overall uncertainty according it's statistical distribution calculated.

Following table shows expectable uncertainties for each measurement type performed.

RF-Measurement	Reference	Frequency range Calculated uncertainty ba confidence level of 9						Remarks	
Conducted emissions (U <sub>CISPR</sub> )	CISPR 16-2-1	9 kHz - 150 kHz 150 kHz - 30 MHz	4.0 dB 3.6 dB						-
