 • Right-click **🔊** on taskbar > Open Sound Settings > Set default sound output / input device
 • Adjust In-App Audio Settings (e.g. Skype)

TROUBLESHOOTING:

- 1. Cannot install the driver**
 This is often caused by a driver conflict - please try the following:
 • Disable your computer's built-in Bluetooth (if any). This can be done via "Device Manager"(accessed by pressing the Windows key + X) or contact us for our **Online Clinic / Email / Call** (see below info).
 • Uninstall other third party drivers: search for "Add or remove programs" from the **⏏** icon on taskbar. Look for Bluetooth-related drivers such as BlueSoleil, CSR Harmony, Widcomm. Right-click and "uninstall" that you find.
- 2. Unable to Pair with my Bluetooth Device**
 More than 90% of pairing issues are due to the device not actually being correctly put into pairing mode. Please refer to your device's user manual or search on Google for how to do this (search for "your product + pairing"). Example of pairing mode for headphones: typically, either the LED will flash quickly or two colors of LED will flash alternately.
