1 TEST STANDARDS

The tests were performed according to following standards:

FCC Rules and Regulations Part 15 Subpart A - General (January, 2019)

| Part 15, Subpart A, Section 15.31 | Measurement standards |
|-----------------------------------|---|
| Part 15, Subpart A, Section 15.33 | Frequency range of radiated measurements |
| Part 15, Subpart A, Section 15.35 | Measurement detector functions and bandwidths |

FCC Rules and Regulations Part 15 Subpart B - Unintentional Radiators (January, 2019)

| Part 15, Subpart B, Section 15.107 | AC Line conducted emissions |
|------------------------------------|--|
| Part 15, Subpart B, Section 15.109 | Radiated emissions, general requirements |
| | |
| ANSI C63.10: 2013 | Testing Unlicensed Wireless Devices |
| ANSI C95.1:1992 | IEEE Standard for Safety Levels with respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3 kHz to 300 GHz |
| CISPR 16-4-2: 2003 | Uncertainty in EMC measurement |
| CISPR 22: 2005 EN 55022: 2006 | Information technology equipment |

2 <u>SUMMARY</u>

GENERAL REMARKS:

The EuT is capable to exchange data with a PC via RJ45 Ethernet cable. This test report describes the radiated and conducted disturbance produced by the data transfer via Data cable and the power supply (ancilliary equipment).

The measurement has been performed in standby mode.

The Reader was tested as a system with RFID Antenna WRA 7070 Antenna Unit and with original antenna cable which was supplied by manufacturer.

For detailed information about the model and the antenna please refer to the user manual or technical documentation from the manufacturer.

The EuT is declared as Class B digital device.

It is not possible to set the EuT only in receiving mode.

Test Setup:

File No. T44114-01-01HU, page 4 of 18

Rev. No. 5.1, 2018-11-19

FINAL ASSESSMENT:

The equipment under test **fulfills** the EMI requirements cited in clause 1 test standards.

Date of receipt of test sample

: _acc. to storage records

: 12. December 2018

Testing concluded on

Testing commenced on

: <u>30. January 2019</u>

3 EQUIPMENT UNDER TEST

3.1 Photo documentation of the EUT – Detailed photos see Attachment A

3.2 Power supply system utilised

Power supply voltage

 Primary: 100-240 V / 50-60 Hz / 1φ, 24.0 V DC Secondary: 24.0 V / DC

3.3 Short description of the equipment under test (EUT)

The device is a UHF RFID reader. The UHF RFID Reader can read active and passive Tags in the frequency range from 902 to 928 MHz.

Number of tested samples: 1 Serial number: G0L3745426

The equipment under test was operated during the measurement under the following conditions:

- Data download via Data Cable RJ45

EUT configuration:

The following peripheral devices and interface cables were connected during the measurements:

4 TEST ENVIRONMENT

4.1 Address of the test laboratory

CSA Group Bayern GmbH Ohmstrasse 1-4 94342 STRASSKIRCHEN GERMANY

4.2 Statement regarding the usage of logos in test reports

The accreditation and notification body logos displayed in this test report are only valid for standards listed in the accreditation or notification scope of CSA Group Bayern GmbH.

4.3 Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

Temperature:

15-35 ° C

Humidity:

30-60 %

86-106 kPa

Atmospheric pressure:

4.4 Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. It is noted that the expanded measurement uncertainty corresponds to the measurement results from the standard measurement uncertainty multiplied by the coverage factor k = 2. The true value is located in the corresponding interval with a probability of 95 % The measurement uncertainty was calculated for all measurements listed in this test report acc. to CISPR 16-4-2 / 11.2003 "Uncertainties, statistics and limit modelling – Uncertainty in EMC measurements" and is documented in the quality system acc. to DIN EN ISO/IEC 17025. For all measurements shown in this report, the measurement uncertainty of the test laboratory, CSA Group Bayern GmbH, is below the measurement uncertainty as defined by CISPR. Therefore, no special measures must be taken into consideration with regard to the limits according to CISPR. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

4.5 Measurement Protocol for FCC, VCCI and AUSTEL

4.5.1 GENERAL INFORMATION

4.5.1.1 <u>Test Methodology</u>

The test methods used comply with ANSI C63.10, "Testing Unlicensed Wireless Devices ".

4.5.1.2 Justification

The Equipment under Test (EUT) is configured in a typical user arrangement in accordance with the manufacturer's instructions. A cable is connected to each available port and either terminated with a peripheral using the appropriate impedance characteristic or left unterminated. Where appropriate, cables are manually manipulated with respect to each in order to obtain maximum disturbances from the unit.

4.6 Determination of worst case measurement conditions

All radiated tests were performed with following antenna type and power supply:

- Antenna: RFID Antenna WRA 7070, 52010334
- Power Setting: Standby
- Power supply: Mean Well GE18I24

4.6.1 DETAILS OF TEST PROCEDURES

4.6.1.1 General Standard Information

The test methods used comply with CISPR Publication 22, EN 55022 - "Information technology equipment - Radio disturbance characteristics - Limits and methods of measurement" and with ANSI C63.4 - "Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz."

5 TEST CONDITIONS AND RESULTS

5.1 Conducted emissions

For test instruments and accessories used see section 6 Part A 4.

5.1.1 Description of the test location

Test location: Shielded Room S2

5.1.2 Photo documentation of the test set-up

5.1.3 Applicable standard

According to FCC Part 15B, Section 15.107(a):

Except as shown in paragraphs (b) and (c) of this Section, for an unintentional radiator that is designed to be connected to the public utility AC power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed the limits in the following table.

| Frequency of emission | Conducted limit (dBµV) | | | | |
|-----------------------|------------------------|------------|--|--|--|
| (MHz) | Quasi-peak | Average | | | |
| 0.15-0.5 | 66 to 56 * | 56 to 46 * | | | |
| 0.5-5 | 56 | 46 | | | |
| 5-30 | 60 | 50 | | | |

* Decreases with the logarithm of the frequency

5.1.4 Description of Measurement

The correction factors for cable loss and antenna gain are stored in the memory of the EMI receiver therefore the final level (dB μ V) appears directly in the reading of the EMI receiver. This level is compared to the FCC limit. To convert between dB μ V and μ V, the following conversions apply:

 $dB\mu V = 20(log \ \mu V)$ $\mu V = 10^{(dB\mu V/20)}$

The measurements are performed using a receiver, which has CISPR characteristic bandwidth and quasi-peak detection and a line impedance stabilization network (LISN) with $50\Omega/50 \mu$ H (CISPR 16) characteristics. Table top equipment is placed on a non-conducting table 80 centimetres above the floor and is positioned 40 centimetres from the vertical ground plane (wall) of the screen room. If the minimum limit margin appears to be less than 20 dB with a peak mode measurement, the emissions are remeasured using a tuned receiver with quasi-peak and average detection and recorded on the data sheets.

5.1.5 Test result

Frequency range: Min. limit margin 0.15 MHz - 30 MHz 13.20 dB at 0.507 MHz

The requirements are **FULFILLED**.

5.2 Radiated emissions

For test instruments and accessories used see section 6 Part SER 1, SER 2.

5.2.1 Description of the test location

| ATS1 |
|------|
| |

Test distance: 3 metres

5.2.2 Photo documentation of the test set-up

CSA Group Bayern GmbH Ohmstrasse 2-4 · 94342 Strasskirchen Tel.:+49(0)9424-94810 · Fax:+49(0)9424-9481440 File No. T44114-01-01HU, page 15 of 18

5.2.3 Applicable standard

According to FCC Part 15B, Section 15.109 (a): Except for Class A digital devices, the field strength of radiated emissions from unintentional radiators at a distance of 3 m shall not exceed the given limit.

According to FCC Part 15C, Section 15.209: The emissions from intentional radiators shall not exceed the effective field strength limits.

5.2.4 Description of Measurement

The spurious emissions from the EUT will be measured on an open area test site in the frequency range of 9 kHz to 30 MHz using a tuned receiver and a shielded loop antenna. The antenna was positioned 3, 10 or 30 m horizontally from the EUT. Measurements have been made in all three orthogonal axes and the shielded loop antenna was rotated to locate the maximum of the emissions. In the case where larger measuring distances are required the results will extrapolated based on the values measured on the closer distances according to Section 15.31(f)(2). The final measurement will be performed with an EMI Receiver set to Quasi Peak detector except for the frequency bands 9 kHz to 90 kHz and 110 to 490 kHz where an average detector will be used according to Section 15.209(d)(2).

Radiated emissions from the EUT are measured in the frequency range of 30 MHz to 1000 MHz using a tuned receiver and appropriate broadband linearly polarized antennas. Measurements between 30 MHz and 1000 MHz are made with 120 kHz/6 dB bandwidth and quasi-peak detection. Table top equipment is placed on a 1.0 X 1.5 dB(μ V/m) non-conducting table 80 centimetres above the ground plane. Floor standing equipment is placed directly on the turntable/ground plane. The set up of the equipment under test will be in accordance to ANSI C63.4. The interface cables that are closer than 40 cm to the ground plane are bundled in the center in a serpentine fashion so they are at least 40 cm from the ground plane. Cables to simulators/testers (if used in this test) are routed through the center of the table and to a screen room located outside the test area. The antenna was positioned 3 m horizontally from the EUT. To locate maximum emissions from the test sample the antenna is varied in height from 1 to 4 metres, measurement scans are made with horizontal and vertical antenna polarization and the EUT is rotated 360 degrees.

The resolution bandwidth during the measurement is as following:9 kHz - 150 kHz:RBW: 200 Hz150 kHz - 30 MHz:RBW: 9 kHz

30 MHz – 1000 MHz: RBW: 120 kHz

5.2.5 Test result

| Frequency [kHz] | L: QP [dBµV] | L: AV [dBµV] | Bandwidth [kHz] | Correct. [dB] | L: QP [dBµV/m] | L: AV [dBµV/m] | Limit [dBµV/m] | Delta [dB] |
|--------------------|-----------------|-----------------|--------------------|------------------|-------------------|-------------------|-------------------|---------------|
| 536.8 | 24.1 | 19.7 | 9.0 | 20 | 44.1 | 39.7 | 73.0 | -33.3 |
| 1073.6 | 23.4 | 18.0 | 9.0 | 20 | 43.4 | 38.0 | 67.0 | -29.0 |
| 1342.0 | 21.6 | 15.9 | 9.0 | 20 | 41.6 | 35.9 | 65.0 | -29.1 |

<u>Note:</u> No unwanted emissions from the EuT could be measured in the relevant frequency ranges. Only ambient nosies could be detected!

| Frequency [MHz] | L: QP [dBµV] | Correct. [dB] | L: QP [dBµV/m] | Limit [dBµV/m] | Delta [dB] |
|--------------------|-----------------|------------------|-------------------|-------------------|---------------|
| 33.78 | 3.7 | 13.4 | 17.1 | 40.0 | -22.9 |
| 118.54 | 9.3 | 12.9 | 22.2 | 43.5 | -21.3 |
| 517.43 | 4.8 | 21.9 | 26.7 | 46.0 | -19.3 |

<u>Note:</u> No unwanted emissions from the EuT could be measured in the relevant frequency ranges. Only ambient nosies could be detected!

Limit according to FCC Part 15 Subpart 15.209(a):

| Frequency | Field strength of spurious emissions | | Measurement distance | | |
|-------------|--------------------------------------|----------|----------------------|--|--|
| (MHz) | (µV/m) | dB(µV/m) | (metres) | | |
| 0.009-0.490 | 2400/F(kHz) | | 300 | | |
| 0.490-1.705 | 24000/F (kHz) | | 30 | | |
| 1.705-30.0 | 30 | 29.5 | 30 | | |

Limit according to FCC part 15B, Section 15.109(a):

| Frequency | Limit | Limit |
|-----------|--------|----------|
| (MHz) | (μV/m) | dB(µV/m) |
| 30 - 88 | 100 | 40 |
| 88 - 216 | 150 | 43.5 |
| 216 - 960 | 200 | 46 |
| Above 960 | 500 | 54 |

The requirements are FULFILLED.

Remarks:

The measurement was performed according to FCC Part 15A, Section 15.33(b), up to 5 GHz.

6 USED TEST EQUIPMENT AND ACCESSORIES

All test instruments used are calibrated and verified regularly. The calibration history is available on request.
