

## DDNS

DDNS is a system which allows the domain name data held in a name server to be updated in real time. The most common use for DDNS is allowing an internet domain name to be assigned to a computer with a varying / dynamic IP Address. This makes it possible for other sites on the internet to establish connection to the machine without needing to track the IP Address themselves.

**DDNS**

DDNS  On  Off

Server name

User ID

Password

Re-type password

Host name

### Server name

Choose the DDNS Server from the list.

### User ID

Enter the user ID for authentication necessary for DDNS connections. Type it up to 64 characters.

### Password

Enter the password for authentication necessary for DDNS connections. Type it up to 32 characters.

### Re-type password

Re-type the password to confirm.

### Host name

Enter the host name that is registered to the DDNS server.

### Notify Type

Select the notify type

### SMTP Server Name

Type the SMTP server name or the IP address

### SMTP Server Port

Set port number of your mail server. The default value is 25. Tick SSL box if the mail server you use has security restriction.

### Authentication

Required when you send an email.

## SMTP

Select if SMTP authentication is necessary when an e-mail is sent.

### POP before SMTP

Select if POP before SMTP authentication is necessary when an e-mail is sent.

### POP server name

Type the POP server name of the user.

### User name, Password

Type the user name and Password of the user.

### Recipient e-mail address

Type up to 3 recipient e-Mail addresses.

### Administrator e-mail address

This address is used for reply mail and sending system messages from the SMTP server.

### Subject

Type the subject/title of the e-Mail.

### Message

Type the text of the E-mail. Default provides network information including IP, Port, MAC, Model, Firmware Version and Web Version.

### Note

If you use g-mail as your mail server, you should set 587 as your port number and tick SSL box.

## Wireless

The wireless network has to be set up by using cable network connection. After setting the camera correctly, the wireless function can work without cable network connection. Please follow the setting process below step by step:

1. See the wireless setting page. Then click “Refresh”. All access points (AP) around you will show up.
2. Select the AP you wish to connect.

3. Enter password at active transmit key if you need. If you don't know the setting of the wireless AP, please ask your network administrator.
4. Choose the option of **Obtain an IP address automatically (DHCP)**.
5. Choose the option of **Obtain DNS server address automatically**.

Use the following IP address  
 Select this when the fixed IP address is set.  
 IP address: Enter the IP address of the device.  
 Subnet mask: Enter the subnet mask.  
 Default gateway: Enter the default gateway.  
 Use the following DNS server address  
 Select this when you set the fixed address as the IP address of DNS server.  
 Primary DNS server: Enter the IP address of the primary DNS server.  
 Secondary DNS server: Enter the IP address of the secondary DNS server, if necessary.

6. Connect to the IP camera with wireless IP address, then you can remove the Ethernet connection.

## Messenger

If Messenger option is selected On, you can set out the setting of MSN account. Messenger function provide an easy-connect feature. User can easy to know what camera's private and public IP address is.

### Protocol

support MSN only.

### Login Account

Camera will use this account to login MSN server.

### Password

password for this msn account.

### Re-type password

re-type password to double confirm.

### Alias

This alias will display on MSN nickname.

### Port range

Select one port range for video transmission.

### IP Notification

Switch the IP notification On / Off. **If this feature switches On**, camera will send IP notification to the users who are allowed.

### Privacy

Switch privacy On / Off. **When privacy turns on**, only those users in allowed list can access the camera.

### User

Input to this blank to edit allow list.

### Allow list

When privacy turns on, only those users in allow list can access the camera.

## FTP Client – general

Use this menu to set up for capturing and sending images to an FTP server. By using FTP client function, you can send the **image file** which has been shot and recorded linked with the built-in motion detection function to FTP server. FTP client setting menu is composed of two tabs, **General**, **Alarm sending** and **Periodical sending**.

**General**

FTP client  On  Off

FTP server name

User name

Password

Re-type password

Passive mode  On  Off

### FTP server name

Type the FTP server name to upload still images up to 64 characters, or the IP address of the FTP server.

### User name

Type the user name for the FTP server.

### Password

Type the password for the FTP server.

### Retype password

To confirm the password, type the same characters as you typed in the Password box.

### Passive mode

Set whether you use the passive mode of FTP server or not when connecting to FTP server. Select **On** to connect to FTP server using the passive mode.

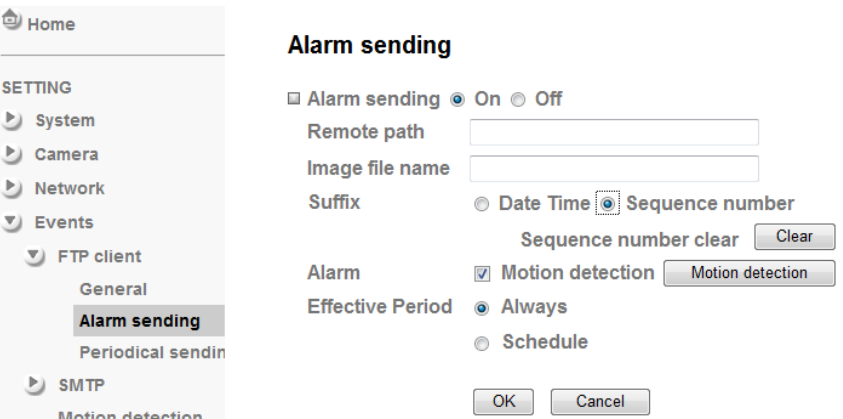

### Note

The frame rate and operability on the main viewer may decrease while a file is being transmitted by the FTP client function.

## FTP Client – alarm sending

Set to forward the **image file** to the specified FTP server linked with the alarm detection by the built-in motion detection function. Select **On** to send the image file to FTP server linked with the alarm detection.

### Remote Path

Type the path to the destination in FTP.

### Image File Name

Type the file name you want to assign to the images when sending to the FTP server.

#### Note

1. You can set motion detection at motion detection page.
2. You can set schedule function at schedule page.

### Suffix

Select a suffix to add to the file name.

#### Date & time

The date & time suffix is added to the Image file name.

#### Sequence number

The sequence number is added to the Image file name.

#### Sequence number clear

Click **Clear** and the suffix of the sequence number returns to 1.

### Alarm

#### Motion Detection

Click it on for using **Motion Detection** function as a sensor.

#### Effective period

Set the period when the periodical sending is effective.

#### Always

The periodical sending is always effective.

#### Schedule

You can specify the period when the periodical sending is effective in the Schedule setting in the other section.

## SMTP – general

You can send a mail with attached **image file** which shot by external sensor input and motion detections or shot periodically.

### SMTP Server Name

Type the SMTP server name or the IP address

### SMTP Server Port

Set port number of your mail server. The default value is 25. Tick SSL box if the mail server you use has security restriction.

### Authentication

Required when you send an email.

## SMTP

Select if SMTP authentication is necessary when an e-mail is sent.

### POP before SMTP

Select if POP before SMTP authentication is necessary when an e-mail is sent.

### POP server name

Type the POP server name of the user.

### User name, Password

Type the user name and Password of the user.

### Recipient e-mail address

Type up to 3 recipient e-Mail addresses.

### Administrator e-mail address

This address is used for reply mail and sending system messages from the SMTP server.

### Subject

Type the subject/title of the e-Mail.

### Message

Type the text of the E-mail.

If you use g-mail as your mail server, you should set 587 as your port number and tick SSL box.

## SMTP – alarm sending

Set to send the mail with connection to the alarm detection by the built-in motion detection function. Select On to send the image file to SMTP server linked with the alarm detection.

### File attachment

Set whether an image file is attached to the mail sent or not.

### Image File Name

Type the file name you want to assign to the images when sending to the FTP server.

### Note

1. You can set motion detection at motion detection page.
2. You can set schedule function at schedule page.

### Suffix

Select a suffix to add to the file name.

#### Date & time

The date & time suffix is added to the Image file name.

#### Sequence number

The sequence number is added to the Image file name.

#### Sequence number clear

Click **Clear** and the suffix of the sequence number returns to 1.

### Alarm

#### Motion Detection

Click it on for using **Motion Detection** function as a sensor.

#### Effective period

Set the period when the periodical sending is effective.

#### Always

The periodical sending is always effective.

## Network Storage – general

Select On if you would like to use the network storage function. Then choose one protocol between Windows network (SMB/CIFS) and Unix network (NFS).

### Protocol - Windows Network (SMB/CIFS):

#### Network Storage Location

Type the IP or name of specified computer and folder. For example, //IP/folder name or // my\_nas/folder name.

#### Workgroup

Type the name of workgroup which the operating computer belongs.

#### User Name & Password

Type the name and password for workgroup.

### Attached File Type

You can choose snapshot or video clip for alarm sending. Select “Snapshot,” one snapshot will be transmitted to the specified network storage location while motion detection / audio detection / alarm input triggered. Select “Video clip,” one video clip which can be selected from 5 seconds to 60 seconds will be transmitted.

### Test

After setting the network storage location information, you can tick the test key to test if the connection between IP CAM and network storage location works.

### **Protocol- Unix network (NFS):**

#### Network Storage Location

Type the IP or name of specified computer and folder. For example, //IP/folder name or my\_nas:/folder name.

### Test

After setting the network storage location information, you can tick the test key to test if the connection between IP CAM and network storage location works.

The periodical sending is always effective.

#### Schedule

You can specify the period when the periodical sending is effective in the Schedule setting in the other section.

You can set schedule function at schedule page.

## Motion Detection

There are three Motion Detection functions as sensors to set for different detecting zones. Each one has Threshold and Sensitivity inputs which you can adjust to specific zone sequentially. Motion Detection function can support to FTP, SMTP and HTTP for capturing and sending images.

**Setting**

<input checked="" type="checkbox"/> Motion detection 1	<input checked="" type="checkbox"/> Motion detection 2	<input checked="" type="checkbox"/> Motion detection 3
Threshold	Threshold	Threshold
Sensitivity	Sensitivity	Sensitivity

Motion Detection

## Threshold

It means the extent which the alarm will be triggered

## Sensitivity

It means that how often the sensor will scan the image different. The higher sensitivity it is and the more frequently it scans.

## Motion Detection 1, 2 and 3

Click it on for using **Motion Detection 1,2 and 3** function as a sensor. You can adjust and move the detecting zone by using mouse.
