

## **Product Description**

### **CLIP MCW (315)**

The CLIP MCW (315) is a wireless curtain-pattern PIR detector for indoor use and designed for easy installation

Its function is based on new and sophisticated patented FM data acquisition and digital signal processing.

Modern technology is used to include 3 different detectors in one case, each programmable for optimized performance at the specific mounting location.

This results in better catch performance and virtually no false alarms.

The superiority in performance of this detector is achieved by applying an improved version of patented True Motion Recognition(TMR) algorithm.

This advanced motion analysis method allows the CLIP MCW to distinguish between the true motion of human body and any other disturbances that cause false alarms.
