

## **Operation Description**

The MCT-220 enables people, for example senior citizens in their home environment, to transmit an emergency call when they are at some distance from their communication unit.

### Features

- Can be used for panic alarm, when used with a Visonic Amber or PowerMax family system.
- Can be used for X-10 devices activating when used with a Visonic PowerMax family system.
- An auxiliary sensor can be connected to the MCT-220. When the sensor is in an alarm state, the MCT-220 sends an alarm message from its auxiliary channel.
- Enables people to answer incoming calls when the telephone is out of reach, when used with a Visonic Amber family system.
- MCT-220 button pressing period - 2 seconds or 300 milliseconds (selectable by an internal function selector).

Supervision signal is regularly transmitted to the communication unit.

- In low battery voltage state, an alarm message is sent to the communication unit and the MCT-220 button blinks during transmission.
- Push button back light can be switched On/Off by an internal function selector.
- Auxiliary input E.O.L / Normally Close type can be selected by an internal function selector.
- Auxiliary input alarm restore message can be enabled / disabled (selected by an internal function selector).
- Water resistant (not applicable to Beta version).
