

MCT-320 SMA

The MCT-320 is a fully supervised, wireless magnetic contact sensor, for use with iControl control panels. The sensor includes a built-in reed switch (that opens upon removal of a magnet placed near it).

The MCT-320 tamper switch is activated when the cover is removed or when the detector is removed from the wall.

A periodic supervision message is transmitted automatically. The target receiver is thus informed, at regular intervals, of the unit's active participation in the system.

Operating power is obtained from an on-board 3 V Lithium battery. When the battery voltage is low, a "low battery" message is sent to the receiver.
