RFID Reader Inside Host Devices

For applications where the RFID reader will be used without its own plastic housing inside host devices (e.g. copy/facsimile machines, office printers, etc.) the product label is placed on the PCB as indicated below.

Where the FCC ID of the RFID device is not visible from the outside of the host device into which the RFID device is installed, an auxiliary label is to be affixed onto the host device referring to the RFID device inside the host; such as **“Contains RFID TX FCC ID WP5TWN3U1”** and **“Contains RFID TX IC: 7948A-TWN3U1”** adequately.
