

Circuitous Philosophy Of The Touch-Reading Pen

I. Circuitous Philosophy: This pen recognizes the OID code on the book through the optical SENSOR. After the codes are amplified, it will transfer the information to IC (SN9P701) to decode the codes. When it gets the correct ID number, it will communicate with the controlling IC(SM339) and sends the correct ID number to the the IC (SM339).Then the IC controls the corresponding sound or operations according to the procedure when it gets the right codes.(such as adjusting of volume).
