5.6. RF EXPOSURE REQUIRMENTS [§§ 15.247(i), 1.1310 & 2.1091]

§ 1.1310: The criteria listed in the following table shall be used to evaluate the environmental impact of human exposure to radio-frequency (RF) radiation as specified in 1.1307(b).

Limits for Maximum Permissible Exposure (MPE)

| Frequency range (MHz) | Electric field strength (V/m) | Magnetic field strength (A/m) | Power density (mW/cm²) | Averaging time (minutes) | | | | | | |
|---|-------------------------------|-------------------------------|------------------------|--------------------------|--|--|--|--|--|--|
| (A) Limits for Occupational/Controlled Exposures | | | | | | | | | | |
| 0.3-3.0 | 614 | 1.63 | *(100) | 6 | | | | | | |
| 3.0-30 | 1842/f | 4.89/f | *(900/f ²) | 6 | | | | | | |
| 30-300 | 61.4 | 0.163 | 1.0 | 6 | | | | | | |
| 300-1500 | | | f/300 | 6 | | | | | | |
| 1500-100,000 | | | 5 | 6 | | | | | | |
| (B) Limits for General Population/Uncontrolled Exposure | | | | | | | | | | |
| 0.3-1.34 | 614 | 1.63 | *(100) | 30 | | | | | | |
| 1.34-30 | 824/f | 2.19/f | *(180/f ²) | 30 | | | | | | |
| 30-300 | 27.5 | 0.073 | 0.2 | 30 | | | | | | |
| 300-1500 | | | f/1500 | 30 | | | | | | |
| 1500-100,000 | | | 1.0 | 30 | | | | | | |

f = frequency in MHz

Note 1: Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure.

Note 2: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or can not exercise control over their exposure.

Method of Measurements

Calculation Method of Power Density/RF Safety Distance:

$$S = \frac{PG}{4\pi \cdot r^2} = \frac{EIRP}{4\pi \cdot r^2}$$

Where, P: power input to the antenna in mW

EIRP: Equivalent (effective) isotropic radiated power.

S: power density mW/cm²

G: numeric gain of antenna relative to isotropic radiator

r: distance to centre of radiation in cm

^{* =} Plane-wave equivalent power density

RF Evaluation 5.6.2.

| Frequency (MHz) | EIRP (dBm) | EIRP (mW) | Evaluation Distance, r (cm) | Power Density, S (mW/cm²) | MPE Limit (mW/cm²) | Margin (mW/cm²) |
|--------------------|---------------|--------------|-----------------------------------|------------------------------|-----------------------|--------------------|
| 920.00 | 6.88 | 4.875 | 20 | 0.001 | 0.613 | -0.612 |
