## INTERTEK TESTING SERVICES

## **RF Exposure**

The Equipment under Test (EUT) is a BLUETOOTH RECEIVER model HEADPHONE SPLITTER which has Bluetooth function. It is powered by DC 3.7V, 250mAh rechargeable battery which can be charged by DC 5V USB port. For more detail information please refer to the user manual.

Antenna Type: Integral antenna.

Antenna Gain: 2dBi.

Modulation Type: GFSK,  $\pi/4$  –DQPSK and 8-DPSK.

The nominal conducted output power specified: -1dBm (Tolerance: ±5dB) The nominal radiated output power specified: 1dBm (Tolerance: ±5dB)

The maximun Radiated output power for the EUT is -0.4dBm in the frequency 2402MHz of BT4.1 which is within the production variation.

The minimum Radiated output power for the EUT is -4.3dBm in the frequency 2480MHz of BT4.1 which is within the production variation.

According to the KDB 447498:

The maximun conducted output power specified is 4.0dBm = 2.5mW The source- based time-averaging conducted output power = 2.5\* Duty Cycle mW (where Duty cycle≤1)

 $\leq$  2.5mW

The SAR Exclusion Threshold Level:

- = 3.0 \* (min. test separation distance, mm) / sqrt(freq. in GHz)
- = 3.0 \* 5 / sqrt (2.480) mW
- = 9.53 mW

Since the source-based time-averaging conducted output power is well below the SAR low threshold level, so the EUT is considered to comply with SAR requirement without testing.

FCC ID: WSGKSBTSP
