

# TEST REPORT

Report number : JPD-TR-17215-0

Issue date : October 27, 2017

The device, as described herewith, was tested pursuant to applicable test procedure and complies with the requirements of;

## FCC Part15 Subpart C IC RSS-210

The test results are traceable to the international or national standards.

## 1. Summary of Test

---

### 1.1 Purpose of test

It is the original test in order to verify conformance to FCC Part 15 Subpart C and IC RSS-210.

### 1.2 Standards

CFR47 FCC Part 15 Subpart C  
IC RSS-210

#### 1.2.1 Test Methods

ANSI C63.10-2013

#### 1.2.2 Deviation from standards

None

### 1.3 List of applied test to the EUT

| Test items<br>Section  | Classification of EUT                      | Condition | Result |
|--|--|-----------|--------|
| IC RSS-Gen 6.6   | Occupied Bandwidth                         | Conducted | PASS   |
| FCC 15.209<br>FCC 15.225 (a)(b)(c)(d)<br>IC RSS-210 B.6      | Operation within the band 13.110-14.010MHz | Radiated  | PASS   |
| FCC 15.209<br>FCC 15.225 (d)<br>IC RSS-Gen 6.4, 6.5, 6.9 7.1 | Transmitter Radiated Spurious Emissions    | Radiated  | PASS   |
| FCC 15.225 (e)<br>IC RSS-Gen 6.11                            | Frequency Tolerance                        | Conducted | PASS   |
| FCC 15.207   | AC Power Line Conducted Emissions          | Conducted | PASS   |

#### 1.3.1 Test set up

Floor-Standing

### 1.4 Modification to the EUT by laboratory

None

## **2. Equipment Under Test**

### **2.1 General Description of equipment**

EUT is the Full Automatic Tablet Packer.

### **2.2 EUT information**

|                      |   |   |
|----------------------|---|---|
| Applicant            | : | Yuyama Mfg. Co., Ltd.<br>3-3-1 Meisinguchi, Toyonaka, Osaka 561-0841 Japan<br>Phone: 06-6332-1315 Fax: 06-6333-2135 |
| Equipment under test | : | Full Automatic Tablet Packer  |
| Trade name           | : | YUYAMA  |
| Model number         | : | YS-TR-152FDXIII-UC4   |
| Serial number        | : | AL136XXX1   |
| EUT condition        | : | Prototype   |
| Power ratings        | : | AC120V  |
| Size                 | : | (W)610 × (D)668 × (H)1977 mm  |
| Environment          | : | Indoor use  |
| Terminal limitation  | : | 0°C to 35°C   |
| RF Specification     |   |   |
| Frequency range      | : | 13.56MHz  |
| Modulation method    | : | ASK   |
| Antenna type         | : | Loop antenna  |

Zacta

## 2.3 Variation of the family model(s)

YS-TR-112FDX III  
 YS-TR-128FDX III  
 YS-TR-136FDX III  
 YS-TR-152FDX III  
 YS-TR-112FDX III -UC1  
 YS-TR-128FDX III -UC1  
 YS-TR-136FDX III -UC1  
 YS-TR-152FDX III -UC1  
 YS-TR-112FDX III -UC2  
 YS-TR-128FDX III -UC2  
 YS-TR-136FDX III -UC2  
 YS-TR-152FDX III -UC2  
 YS-TR-112FDX III -UC3  
 YS-TR-128FDX III -UC3  
 YS-TR-136FDX III -UC3  
 YS-TR-152FDX III -UC3  
 YS-TR-112FDX III -UC4  
 YS-TR-128FDX III -UC4  
 YS-TR-136FDX III -UC4  
 YS-TR-152FDX III -UC4 - Tested

The difference in the model number of the family model is the difference in the number of cassettes of tablets to be set.

There is no difference in wireless function.

## 2.4 Operating mode

[Transmit mode]

- i) Start NFC test mode

### **3. Configuration of equipment**

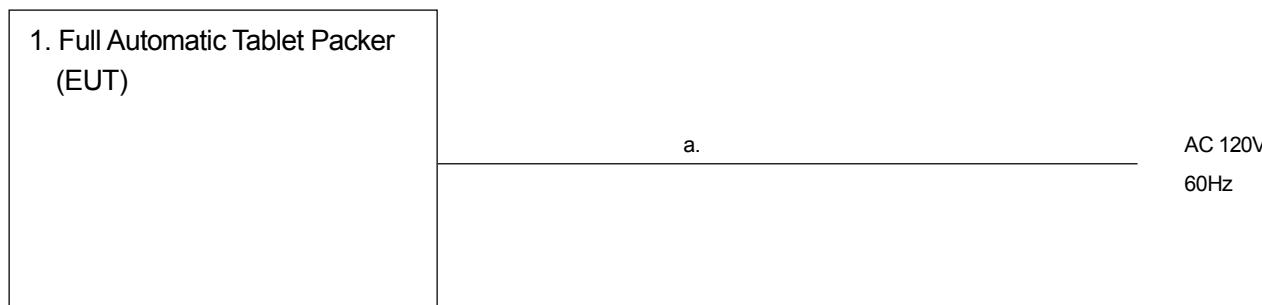

#### **3.1 Equipment(s) used**

| No. | Equipment                    | Company | Model No.           | Serial No. | FCC ID  | Comment |
|-----|------------------------------|---------|---------------------|------------|---------|---------|
| 1   | Full Automatic Tablet Packer | YUYAMA  | YS-TR-152FDXIII-UC4 | AL136XXX1  | WSLFDX3 | EUT     |

#### **3.2 Cable(s) used**

| No. | Cable    | Length[m] | Shield | Connector | Comment |
|-----|----------|-----------|--------|-----------|---------|
| a   | AC cable | 3         | Yes    | Metal     |         |

#### **3.3 System configuration**

Note1: Numbers assigned to equipment or cables on this diagram correspond to the list in “3.1 Equipment(s) used” and “3.2 Cable(s) used”.

## 4. Occupied Bandwidth

### 4.1 Measurement procedure [IC RSS-Gen 6.6]

The transmitter output is connected to the spectrum analyzer. The RBW is set to 1% to 3% of the 99% bandwidth. The VBW is set to 3 times the RBW. The sweep time is coupled. The spectrum analyzer internal 99% bandwidth function is utilized.

The spectrum analyzer is set to;

- RBW=1kHz, VBW=3kHz, Span=100kHz, Sweep=auto, Detector=Sample

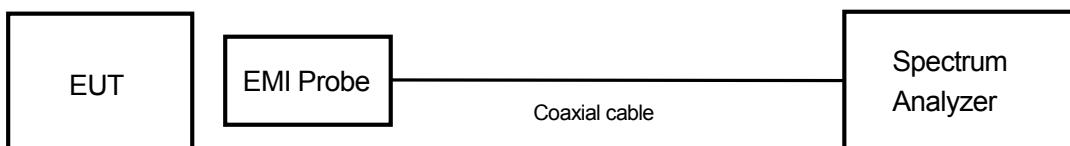

The EUT was set to operate with following conditions.

- 13.56MHz

The test mode of EUT is as follows.

- Transmit mode

- Test configuration

### 4.2 Limit

None

### 4.3 Measurement result

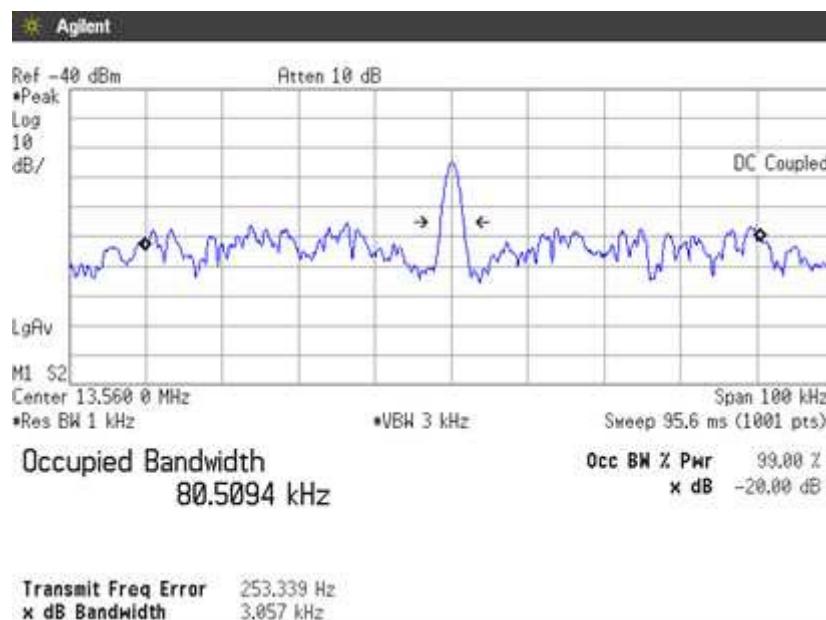

Date : October 12, 2017  
 Temperature : 22.2 [°C]  
 Humidity : 54.1 [%]  
 Test place : Constant temperature room

Test engineer :

Taiki Watanabe

| Frequency<br>(MHz) | Occupied Bandwidth<br>(kHz) |
|--------------------|-----------------------------|
| 13.56              | 80.5094                     |

#### 4.4 Trace data

## 5. Operation within the band 13.110-14.010MHz

### 5.1 Measurement procedure

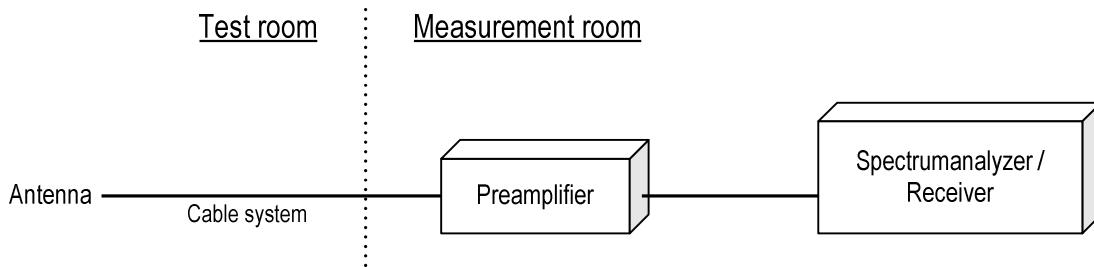

[FCC 15.209, 15.225 (a)(b)(c)(d), IC RSS-210 B.6]

Test was applied by following conditions.

|                       |   |                                |
|-----------------------|---|--------------------------------|
| Test method           | : | ANSI C63.10                    |
| Frequency range       | : | 13.110MHz to 14.010MHz         |
| Test place            | : | 10m Semi-anechoic chamber No.1 |
| EUT was placed on     | : | Electrical insulating material |
| Antenna distance      | : | 10m                            |
| Test receiver setting |   |                                |
| - Detector            | : | Quasi-peak                     |
| - Bandwidth           | : | 9kHz                           |

EUT operating mode is selected to emit the maximum noise. Overall frequency range is investigated with spectrum analyzer using peak detector. Then, emission measurements frequency range 13.110MHz to 14.010MHz were performed with test receiver in above setting. The turntable and the Loop antenna are rotated by 360 degrees and stopped at azimuth of producing the maximum emission. Sufficient time for EUT, peripherals and test equipment is provided in order for them to warm up to their normal operating condition.

#### - Test configuration

### 5.2 Calculation method

Emission level = Reading + (Ant. factor + Cable system loss –Amp. Gain)

Margin = Limit – Emission level

### 5.3 Limit

- (a) The field strength of any emissions within the band 13.553-13.567MHz shall not exceed 15,848uV/m at 30m.
- (b) Within the band 13.410-13.553MHz and 13.567-13.710MHz, the field strength of any emissions shall not exceed 334uV/m at 30m.
- (c) Within the band 13.110-13.410MHz and 13.710-14.010MHz, the field strength of any emissions shall not exceed 106uV/m at 30m.
- (d) The field strength of any emissions appearing outside of the 13.110-14.010MHz and shall not exceed the general radiated emission limits in FCC 15.209.

Note:

1. The lower limit shall apply at the transition frequencies.
2. Emission level [dBuV/m] = 20log Emission [uV/m]
3. Measurements were corrected to 30m using 40log (10/30) = -19.1dB

### 5.4 Test data

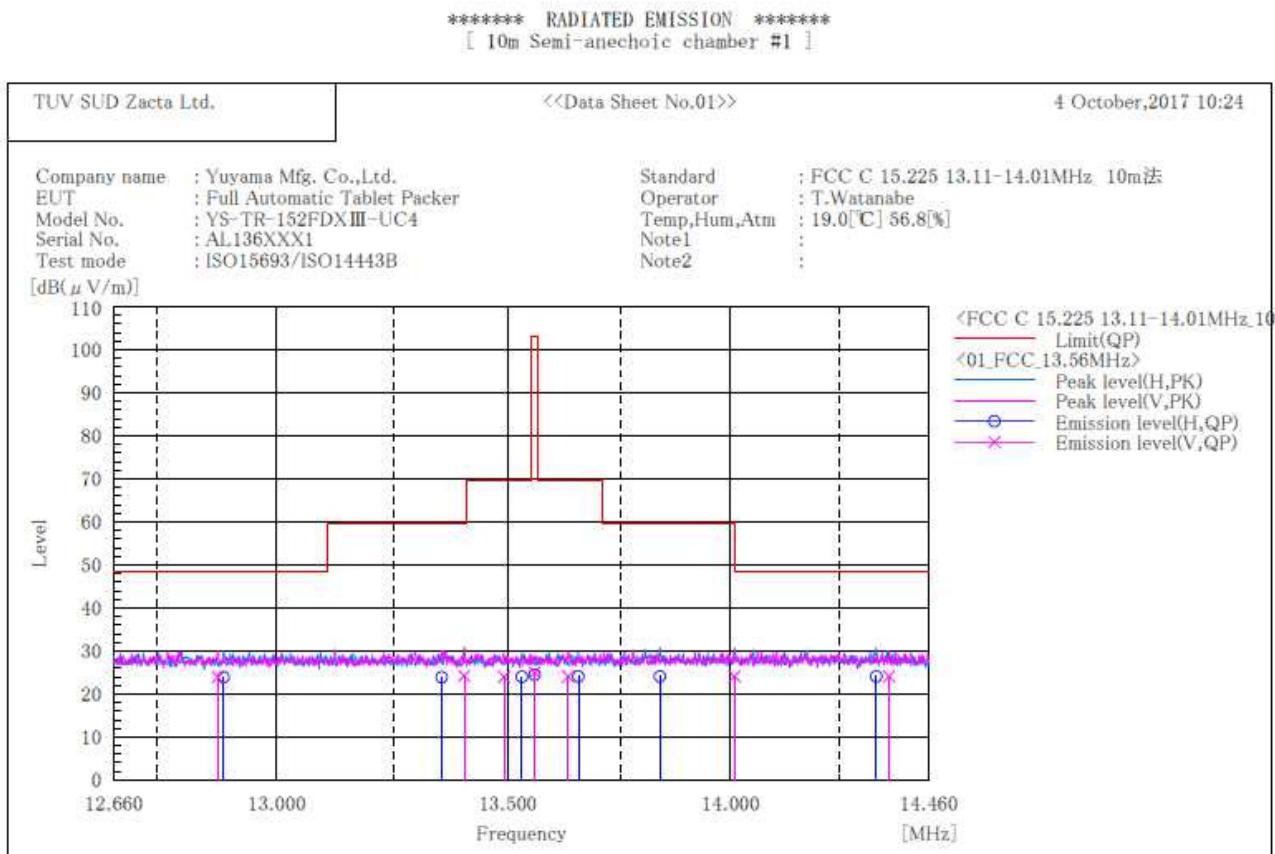

Date : October 4, 2017  
 Temperature : 19.0 [°C]  
 Humidity : 56.8 [%]  
 Test place : 10m Semi-anechoic chamber No.1

Test engineer :

Taiki Watanabe

| Frequency range (MHz) | Frequency (MHz) | Level                    |                          | Limit (dBuV/m) | Margin (dB) | Result |
|-----------------------|-----------------|--------------------------|--------------------------|----------------|-------------|--------|
|                       |                 | Measured at 10m (dBuV/m) | Measured at 30m (dBuV/m) |                |             |        |

## **6. Radiated Emissions**

### **6.1 Measurement procedure**

[FCC 15.209, 15.225 (d), IC RSS-Gen 6.4, 6.5, 6.9, 7.1]

Test was applied by following conditions.

|                   |   |                                |
|-------------------|---|--------------------------------|
| Test method       | : | ANSI C63.10                    |
| Frequency range   | : | 9kHz to 30MHz                  |
| Test place        | : | 10m Semi-anechoic chamber No.1 |
| EUT was placed on | : | Electrical insulating material |
| Antenna distance  | : | 10m                            |

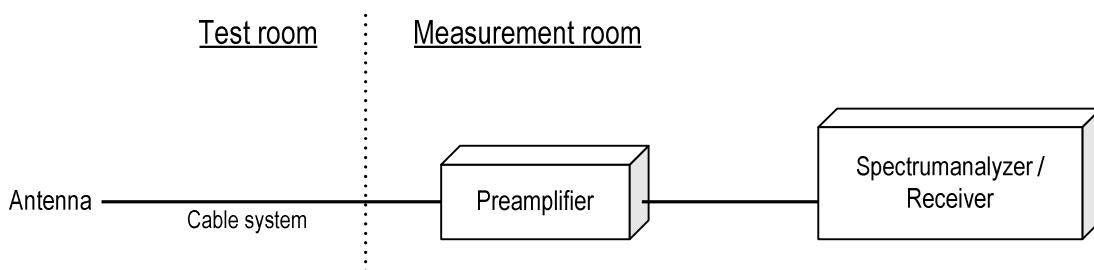

|                       |   |   |
|-----------------------|---|---|
| Test receiver setting | : |   |
| - Detector            | : | Average (9kHz-90kHz, 110kHz-490kHz), Quasi-peak |
| - Bandwidth           | : | 200Hz, 9kHz                                     |

Although these tests were performed other than open area test site, adequate comparison measurements were confirmed against 30 m open are test site.

Therefore sufficient tests were made to demonstrate that the alternative site produces results that correlate with the ones of tests made in an open field based on KDB 937606.

EUT operating mode is selected to emit the maximum noise. Overall frequency range is investigated with spectrum analyzer using peak detector. Then, emission measurements up to 30MHz were performed with test receiver in above setting. The turntable and the Loop antenna are rotated by 360 degrees and stopped at azimuth of producing the maximum emission. Sufficient time for EUT, peripherals and test equipment is provided in order for them to warm up to their normal operating condition.

- Test configuration

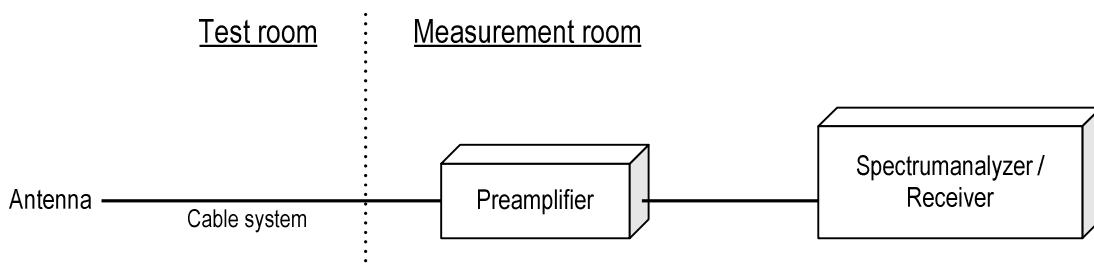

Test was applied by following conditions.

|                   |   |                                |
|-------------------|---|--------------------------------|
| Test method       | : | ANSI C63.10                    |
| Frequency range   | : | 30MHz to 1000MHz               |
| Test place        | : | 3m Semi-anechoic chamber       |
| EUT was placed on | : | Electrical insulating material |
| Antenna distance  | : | 3m                             |

|                       |   |            |
|-----------------------|---|------------|
| Test receiver setting | : | Quasi-peak |
| - Detector            | : | 120kHz     |

EUT operating mode is selected to emit the maximum noise. Overall frequency range is investigated with spectrum analyzer using peak detector. Then, emission measurements up to 1000MHz were performed with test receiver in above setting. In order to find the maximum emissions, antenna is adjusted between 1m and 4m in height and varied its polarization (horizontal and vertical), and EUT azimuth was also varied by rotating turntable 0 to 360 degrees. Sufficient time for EUT, peripherals and test equipment is provided in order for them to warm up to their normal operating condition.

#### - Test configuration

## 6.2 Calculation method

[9kHz to 150kHz]

Emission level = Reading + (Ant. factor + Cable system loss )

Margin = Limit – Emission level

[150kHz to 1000MHz]

Emission level = Reading + (Ant. factor + Cable system loss –Amp. Gain)

Margin = Limit – Emission level

### 6.3 Limit

| Frequency<br>[MHz] | Field strength  |               | Distance<br>[m] |
|--------------------|-----------------|---------------|-----------------|
|                    | [uV/m]          | [dBuV/m]      |                 |
| 0.009-0.490        | 2400 / F [kHz]  | 20logE [uV/m] | 300             |
| 0.490-1.705        | 24000 / F [kHz] | 20logE [uV/m] | 30              |
| 1.705-30           | 30              | 29.5          | 30              |
| 30-88              | 100             | 40.0          | 3               |
| 88-216             | 150             | 43.5          | 3               |
| 216-960            | 200             | 46.0          | 3               |
| Above 960          | 500             | 54.0          | 3               |

Note:

1. The lower limit shall apply at the transition frequencies.
2. Emission level [dBuV/m] = 20log Emission [uV/m]
3. Measurements were corrected to 30m using 40log (10/30) = -19.1dB

## 7. Frequency Tolerance

---

### 7.1 Measurement procedure

[FCC 15.205 (e), IC RSS-Gen 6.11]

The EUT was placed of an inside of an constant temperature chamber as the temperature in the chamber was varied between -30°C and +50°C. The temperature was incremented by 10°C intervals and the unit was allowed to stabilize at each measurement. The center frequency of the transmitting channel was evaluated at each temperature and the frequency deviation from the channels center frequency was recorded.

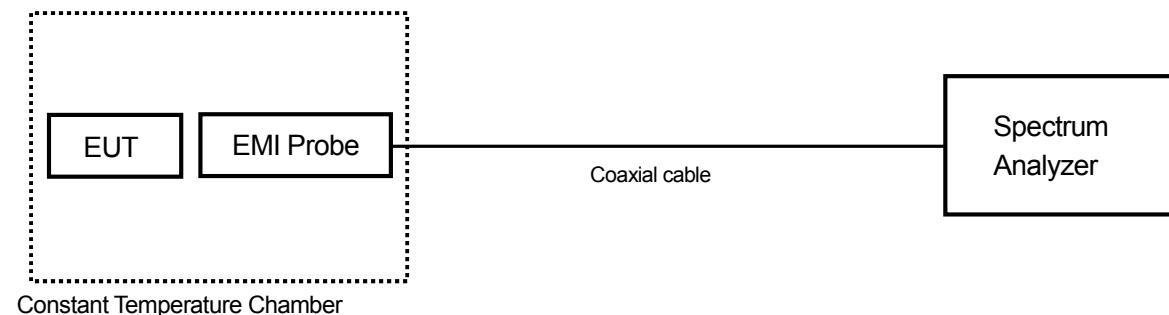

The EUT was set to operate with following conditions.

- 13.56MHz

The test mode of EUT is as follows.

- Transmit mode

- Test configuration

### 7.2 Limit

The Frequency tolerance of the carrier signal shall be maintained within +/- 0.01% over a temperature variation of -30 degrees to +50 degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C.

### 7.3 Test data

Date : October 11, 2017  
 Temperature : 23.1 [°C]  
 Humidity : 51.4 [%]  
 Test place : Constant temperature room

Test engineer : Taiki Watanabe

Date : October 12, 2017  
 Temperature : 22.2 [°C]  
 Humidity : 54.1 [%]  
 Test place : Constant temperature room

Test engineer : Taiki Watanabe

Note. Frequency Tolerance (ppm) = Measurements Frequency (MHz) – Reference Frequency (MHz) / Reference Frequency (MHz) x 1000000

The primary power supply voltage rating of this EUT is 85% to 115%.

## 8. AC Power Line Conducted Emissions

### 8.1 Measurement procedure [FCC 15.207]

Test was applied by following conditions.

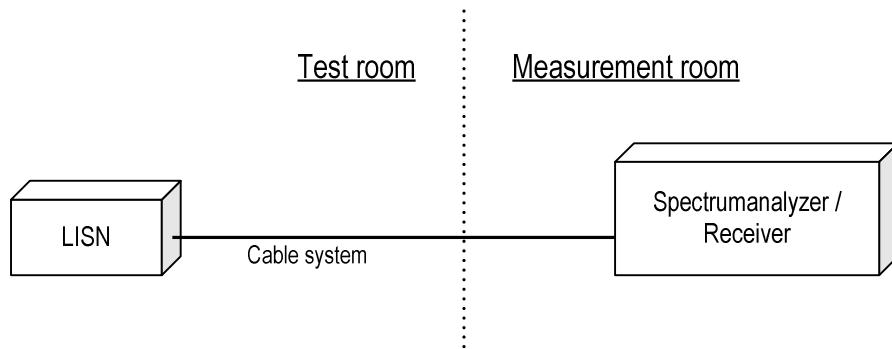

|                       |   |                                |
|-----------------------|---|--------------------------------|
| Test method           | : | ANSI C63.10                    |
| Frequency range       | : | 0.15MHz to 30MHz               |
| Test place            | : | 3m Semi-anechoic chamber       |
| EUT was placed on     | : | Electrical insulating material |
| Test receiver setting |   |                                |
| - Detector            | : | Quasi-peak, Average            |
| - Bandwidth           | : | 9kHz                           |

EUT and peripherals are connected to  $50\Omega/50\mu\text{H}$  Line Impedance Stabilization Network (LISN) which are connected to reference ground plane, and are placed 80cm away from EUT. Excess of AC power cable is bundled in center.

LISN for peripheral is terminated in  $50\Omega$ .

EUT operating mode is selected to emit the maximum noise. Overall frequency range is investigated with spectrum analyzer using peak detector. Maximum emission configuration is determined by manipulating the EUT, peripherals, interconnecting cables. Then, emission measurements are performed with test receiver in above setting to each current-carrying conductor of the mains port. Sufficient time for EUT, peripherals and test equipment is provided in order for them to warm up to their normal operating condition. If the average limit is met when using a quasi-peak detector receiver, the EUT shall be deemed to meet both limits.

- Test configuration

### 8.2 Calculation method

Emission level = Reading + (LISN. factor + Cable system loss)

Margin = Limit – Emission level

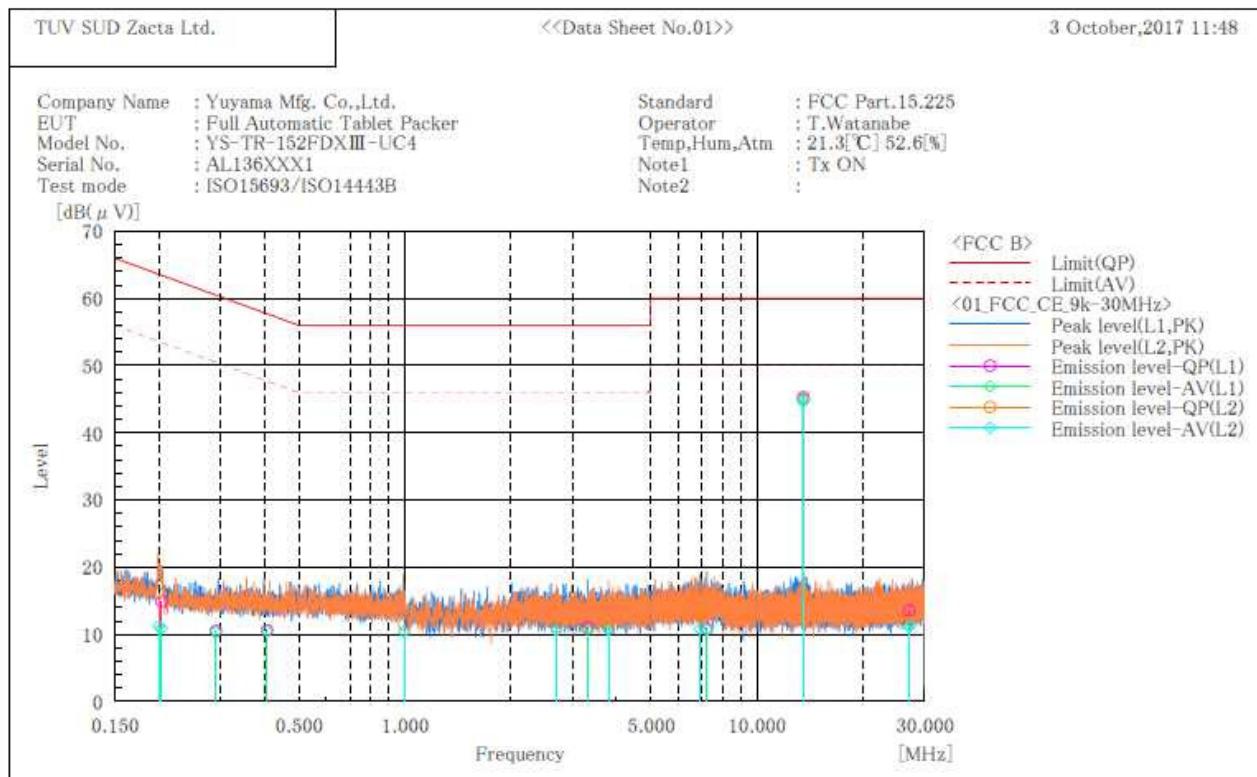

### 8.3 Limit

| Frequency<br>[MHz] | Limit     |           |
|--------------------|-----------|-----------|
|                    | QP [dBuV] | AV [dBuV] |
| 0.15-0.5           | 66-56*    | 56-46*    |
| 0.5-5              | 56        | 46        |
| 5-30               | 60        | 50        |

\*: The limit decreases linearly with the logarithm of the frequency in the range 0.15MHz to 0.5MHz.

## 9. Uncertainty of measurement

---

Expanded uncertainties stated are calculated with a coverage Factor k=2.

Please note that these results are not taken into account when determining compliance or non-compliance with test result.

| Test item                                | Measurement uncertainty |
|--|-------------------------|
| Conducted emission, AMN (9kHz – 150kHz)  | ±3.8dB                  |
| Conducted emission, AMN (150kHz – 30MHz) | ±3.3dB                  |
| Radiated emission (9kHz – 30MHz)         | ±3.0dB                  |
| Radiated emission (30MHz – 1000MHz)      | ±4.7dB                  |
| Radiated emission (1GHz – 6GHz)          | ±4.9dB                  |
| Radiated emission (6GHz – 26GHz)         | ±5.2dB                  |
