#### LS Research, LLC in Review

As an EMC Testing Laboratory, our Accreditation and Assessments are recognized through the following:

#### A2LA – American Association for Laboratory Accreditation

Accreditation based on ISO/IEC 17025: 2005 with Electrical (EMC) Scope of Accreditation A2LA Certificate Number: 1255.01

#### Federal Communications Commission (FCC) - USA

Listing of 3 Meter Semi-Anechoic Chamber based on Title 47 CFR – Part 2.948 FCC Registration Number: 90756

#### Industry Canada

On file, 3 Meter Semi-Anechoic Chamber based on RSS-212 – Issue 1

File Number: IC 3088-A

On file, 3 and 10 Meter OATS based on RSS-212 - Issue 1

File Number: IC 3088

### U. S. Conformity Assessment Body (CAB) Validation

Validated by the European Commission as a U. S. Competent Body operating under the U. S./EU, Mutual Recognition Agreement (MRA) operating under the European Union Electromagnetic Compatibility –Council Directive 2004/108/EC (formerly 89/336/EEC, Article 10.2).

Date of Validation: January 16, 2001

Validated by the European Commission as a U.S. Notified Body operating under the U.S. /EU, Mutual Recognition Agreement (MRA) operating under the European Union Telecommunication Equipment – Council Directive 99/5/EC, Annex V.

Date of Validation: November 20, 2002 Notified Body Identification Number: 1243

Prepared For: JDSU	Name: OneExpert CATV
Report: TR 315103 D	Model: OneExpert CATV
LSR: C-2210	Serial: Eng. Sample

#### 1.0 Summary of Test Report

In April-June 2015 the EUT, OneExpert CATV, as supplied by JDSU was tested and MEETS the following requirements:

Operation in the 5.25 – 5.35 GHz and 5.47 – 5.725 GHz bands

FCC Rule Part	IC Standard	Test Description	Measurement Procedure	Test Result
15.407	RSS-247	Dynamic Frequency Selection	FCC KDB 905462 D02	Pass*
(h)(2)	Section 6.3	Bynamic Frequency Selection	1 CC RDB 303 102 B02	1 433
15.407	RSS-247	Channel Availability Check Time	FCC KDB 905462 D02	N/A*
(h)(2)(ii)	Section 6.3	Chaimer Availability Check Time	1°CC RDB 903402 D02	IN/A
15.407	RSS-247	Channel Move Time	FCC KDB 905462 D02	Pass
(h)(2)(iii)	Section 6.3	Chaimer wove Time	1°CC RDB 903402 D02	rass
15.407	RSS-247	Non Osaupanay pariod	FCC KDB 905462 D02	Pass
(h)(2)(iv)	Section 6.3	Non-Occupancy period	1°CC KDD 903402 D02	rass

<sup>\*</sup> The EUT is a client only device

#### 2.0 Test Facilities

All testing was performed at:

LS Research, LLC W66 N220 Commerce Court Cedarburg, Wisconsin, 53012 USA

- LS Research, LLC is accredited by A2LA (American Association for Laboratory Accreditation) to the requirements of ISO/IEC 17025, 2005 "General Requirements for the Competence of Calibration and Testing Laboratories".
- LS Research, LLC's scope of accreditation includes all test methods listed herein, unless otherwise noted.

Prepared For: JDSU	Name: OneExpert CATV
Report: TR 315103 D	Model: OneExpert CATV
LSR: C-2210	Serial: Eng. Sample

#### 3.0 Client Information

Manufacturer Name:	JDSU
Address:	5808 Churchman Bypass Indianapolis, IN 46203
<b>Contact Person:</b>	Adam Nowotarski

### 3.1 Equipment Under Test (EUT) Information

The following information has been supplied by the applicant.

<b>Product Name:</b>	OneExpert CATV
<b>Model Number:</b>	OneExpert CATV
Serial Number:	Eng. Sample
FCC ID:	WUW-22100382
IC:	9613A-22100382

### **3.2** Product Description

802.11 a/n device using HT20 channels Device does not transmit BT and WLAN simultaneously Device does not utilize channels 48 and 52

## 3.3 Modifications Incorporated In the EUT for Compliance Purposes

None noted at time of test

### 3.4 Deviations & Exclusions from Test Specifications

None noted at time of test

#### 3.5 Additional Information

EUT connected to AP in normal mode of operation and connection to internet was setup to download speed test file.

Prepared For: JDSU	Name: OneExpert CATV
Report: TR 315103 D	Model: OneExpert CATV
LSR: C-2210	Serial: Eng. Sample

#### 4.0 Conditions of Test

Environmental:

Temperature: 20-25° C Relative Humidity: 30-60% Atmospheric Pressure: 86-106 kPa

Mains Voltage: 120 VAC 60 Hz

#### 5.0 Test Equipment

All test equipment is calibrated by a calibration laboratory accredited by A2LA to the requirements of ISO 17025. For a complete list of test equipment and calibration dates, see Appendix A. Unless otherwise noted, resolution bandwidth of measuring instrument used during testing for given frequency range, see below.

Frequency Range	Resolution Bandwidth
9 kHz – 150 kHz	200 Hz
150 kHz – 30 MHz	9 kHz
30 MHz – 1000 MHz	120 kHz
Above 1000 MHz	1 MHz

#### **6.0** Conformance Summary

The EUT was found to MEET the requirements as described within the specification of FCC Title 47, CFR Subpart E Part and RSS-247 DFS requirements.

#### If some emissions are seen to be within 3 dB of their respective limits:

As these levels are within the tolerances of the test equipment and site employed, there is a possibility that this unit, or a similar unit selected out of production may not meet the required limit specification if tested by another agency.

LS Research, LLC certifies that the data contained herein was taken under conditions that meet or exceed the requirements of the test specifications. The results in this Test Report apply only to the item(s) tested on the above-specified dates. Any modifications made to the EUT subsequent to the indicated test date(s) will invalidate the data herein, and void this certification.

## Section 8.3 (cont.)

Verification that when the device is "off" that the RF energy emitted is below the FCC		
, , , , , , , , , , , , , , , , , , , ,	Confirmed	
, , , , ,		
or control signals) are below the FCC rules for unintentional radiation due to device		
leakage, oscillator noise, clocks, and other unintentional RF generators.		
Spectrum Analyzer, VSA, or some other data gathering Instrument plots showing		
compliance with the Channel Move Time requirements during in the In-Service		
Monitoring. The plots need to show U-NII device transmissions on the Channel in the	Supplied	
form of RF activity on the vertical axis versus time on the horizontal axis. Only one 10		
second plot needs to be reported for Radar Type 0. The plot for the Short Pulse Radar		
Types should start at the end of the radar burst. The Channel Move Time will be		
calculated based on the plot of Radar Type 0. The plots need to show U-NII device		
transmissions on the Channel in the form of RF activity on the vertical axis versus time		
The plots and/or data must show the U-NII Device's compliance with the 200		
milliseconds limit on data transmission and compliance with the 60 millisecond	Supplied	
aggregate limit found in Table 4.		
Indicate the total number of times the test was performed.	Radar type 0 only	
Indicate a detect/not detect for each waveform within a signal type and the number of		
failures and the number of successful radar detection times within the time limit.	Not applicable - device client only	
Sample data sheets are shown in Tables 8-11.		
Verify compliance with the minimum percentage of successful detection requirements	Not applicable device client only	
found in Tables 5-7.	Not applicable - device client only	
Spectrum Analyzer plot(s) showing compliance with the 30 minute Non-Occupancy		
Period requirement. Only one plot is required. This is a separate test that is performed	Supplied	
in addition to the other In-Service Monitoring tests.		
	rules for unintentional radiators:  For the plots of U-NII RF activity versus time, the device is considered to be "off" or not transmitting when intentional U-NII signals (beacons, data packets or transmissions, or control signals) are below the FCC rules for unintentional radiation due to device leakage, oscillator noise, clocks, and other unintentional RF generators.  Spectrum Analyzer, VSA, or some other data gathering Instrument plots showing compliance with the Channel Move Time requirements during in the In-Service Monitoring. The plots need to show U-NII device transmissions on the Channel in the form of RF activity on the vertical axis versus time on the horizontal axis. Only one 10 second plot needs to be reported for Radar Type 0. The plot for the Short Pulse Radar Types should start at the end of the radar burst. The Channel Move Time will be calculated based on the plot of Radar Type 0. The plots need to show U-NII device transmissions on the Channel in the form of RF activity on the vertical axis versus time. The plots and/or data must show the U-NII Device's compliance with the 200 milliseconds limit on data transmission and compliance with the 60 millisecond aggregate limit found in Table 4.  Indicate the total number of times the test was performed.
