RE: Request for dismissal of certification application

Dear Sir/Madam,

The application referenced above was submitted in error. Since submitting that application we have been made aware of 47 CFR 15.201 (a) which states that "...devices operating below 490 kHz in which all emissions are at least 40 dB below the limits in Section 15.209 shall be **verified**..."

Based upon the measurements performed by our testing vendor *dB Technology Cambridge Ltd* (a test firm previously known to the FCC) our device is subject to 15.201(a) and we are required to pursue verification rather than certification to market it in the USA. A full report of the said measurements has been submitted with this request cover letter.

We therefore request that you please dismiss our application (EA973136) immediately. We will also separately and subsequently request that you please refund the fee that was paid for this unnecessary application.

If you have any questions or requests regarding this issue please contact me via email or telephone as detailed below. We thank you for your understanding and time in this matter.

Yours sincerely,

Scott Mackie
