

## **Statement for SZ900/SZ901 class II permission change project**

Date: Oct. 30, 2009

Dear Ber Vos,

We state that the tested SAR value for this class II permission change project was measured using SPEAG DAISY 5 system.

That the measured SAR values are higher than original one is because we have changed our SAR measurement system.

The original SAR test was performed using APREL SAR system, but this new SAR test for class II change was performed using SPEAG DAISY 5 SAR system.

The reason we replaced APREL SAR system with DAISY 5 is because we found the SAR value measured by APREL SAR system was lower compared to DAISY 5 and also we found APREL SAR system has higher uncertainty.

Sincerely,

Title: Vice President
