Onset Computer Corporation

# BLE Module Technical Description

Product Name	HOBO BLE Module
Model Number	91-18296
Document Owner	Jim Corrigan

The BLE Module is a backend communication component that will be utilized in various upcoming development efforts. This Bluetooth® Smart-enabled module is designed for wireless communication with a host device. The module is intended to provide an interface to a CO-processor that will be located on a Host card and will be the mechanism for BLE communications to a mobile device.

This design is not intended to act as a standalone device and will always require a host card. The 91-18296 BLE Module is only intended for use as a Limited Modular Approval device and will under no circumstances, be used in non-Onset products.
