KDB996369 Check List

FCC ID: WY7-927A Applicant: SHIMANO INC.

This transmitter complies with KDB996369 D03 as indicated below:

| Modular approval requirement | Applicable | Not Applicable |
|--|----------------------|----------------|
| 2.2 List of applicable FCC rules | | |
| List the FCC rules that are applicable to the modular transmitter. | | |
| These are the rules that specifically establish the bands of | Please refer to user | |
| operation, the power, spurious emissions, and operating | manual. | |
| fundamental frequencies. DO NOT list compliance to | | |
| unintentional-radiator rules (Part 15 Subpart B) since that is not a | | |
| condition of a module grant that is extended to a host manufacturer. | | |
| See also Section 2.10 below concerning the need to notify host | | |
| manufacturers that further testing is required. | | |
| 2.3 Summarize the specific operational use conditions | \square | |
| Describe use conditions that are applicable to the modular | | |
| transmitter, including for example any limits on antennas, etc. For | Please refer to user | |
| example, if point-to-point antennas are used that require reduction | manual. | |
| in power or compensation for cable loss, then this information | | |
| must be in the instructions. If the use condition limitations extend | | |
| to professional users, then instructions must state that this | | |
| information also extends to the host manufacturer's instruction | | |
| manual. In addition, certain information may also be needed, such | | |
| as peak gain per frequency band and minimum gain, specifically | | |
| for master devices in 5 GHz DFS bands. | | |
| 2.4 Limited module procedures | \square | \Box |
| If a modular transmitter is approved as a "limited module," then the | | |
| module manufacturer is responsible for approving the host | Please refer to LMA | |
| environment that the limited module is used with. The | Letter and user | |
| manufacturer of a limited module must describe, both in the filing | manual. | |
| and in the installation instructions, the alternative means that the | | |
| limited module manufacturer uses to verify that the host meets the | | |
| necessary requirements to satisfy the module limiting conditions. | | |
| A limited module manufacturer has the flexibility to define its | | |
| alternative method to address the conditions that limit the initial | | |
| approval, such as: shielding, minimum signaling amplitude, | | |
| buffered modulation/data inputs, or power supply regulation. The | | |
| alternative method could include that the limited module | | |
| manufacturer reviews detailed test data or host designs prior to | | |
| giving the host manufacturer approval. | | |
| This limited module procedure is also applicable for RF exposure | | |
| evaluation when it is necessary to demonstrate compliance in a | | |
| specific host. The module manufacturer must state how control of | | |
| the product into which the modular transmitter will be installed | | |
| will be maintained such that full compliance of the product is | | |
| always ensured. For additional hosts other than the specific host | | |
| originally granted with a limited module, a Class II permissive | | |
| change is required on the module grant to register the additional | | |
| host as a specific host also approved with the module. | | |

| 2.5 Trace antenna designs | | \boxtimes |
|--|----------------------|-------------|
| For a modular transmitter with trace antenna designs, see the | | |
| guidance in Question 11 of KDB Publication 996369 D02 FAQ - | | |
| Modules for Micro-Strip Antennas and traces. The integration | | |
| information shall include for the TCB review the integration | | |
| instructions for the following aspects: layout of trace design, parts | | |
| | | |
| list (BOM), antenna, connectors, and isolation requirements. | | |
| a) Information that includes permitted variances (e.g., trace | | |
| boundary limits, thickness, length, width, shape(s), dielectric | | |
| constant, and impedance as applicable for each type of antenna); | | |
| b) Each design shall be considered a different type (e.g., antenna | | |
| length in multiple(s) of frequency, the wavelength, and antenna | | |
| shape (traces in phase) can affect antenna gain and must be | | |
| considered); | | |
| c) The parameters shall be provided in a manner permitting host | | |
| manufacturers to design the printed circuit (PC) board layout; | | |
| d) Appropriate parts by manufacturer and specifications; | | |
| e) Test procedures for design verification; and | | |
| f) Production test procedures for ensuring compliance. | | |
| The module grantee shall provide a notice that any deviation(s) | | |
| | | |
| from the defined parameters of the antenna trace, as described by | | |
| the instructions, require that the host product manufacturer must | | |
| notify the module grantee that they wish to change the antenna | | |
| trace design. In this case, a Class II permissive change application | | |
| is required to be filed by the grantee, or the host manufacturer can | | |
| take responsibility through the change in FCC ID (new | | |
| application) procedure followed by a Class II permissive change | | |
| application. | | |
| | | |

| 2.8 Label and compliance information | \boxtimes | |
|--|----------------------|--|
| Grantees are responsible for the continued compliance of their | | |
| modules to the FCC rules. This includes advising host product | Please refer to user | |
| manufacturers that they need to provide a physical or e-label | manual. | |
| stating "Contains FCC ID" with their finished product. | manual. | |
| 2.9 Information on test modes and additional testing | \boxtimes | |
| requirements | | |
| Additional guidance for testing host products is given in KDB | Please refer to user | |
| Publication 996369 D04 Module Integration Guide. Test modes | manual. | |
| should take into consideration different operational conditions for | manual. | |
| | | |
| a stand-alone modular transmitter in a host, as well as for multiple | | |
| simultaneously transmitting modules or other transmitters in a host | | |
| product. The grantee should provide information on how to configure test. | | |
| The grantee should provide information on how to configure test modes for host product evaluation for different operational | | |
| conditions for a stand-alone modular transmitter in a host, versus | | |
| | | |
| with multiple, simultaneously transmitting modules or other transmitters in a host. | | |
| | | |
| Grantees can increase the utility of their modular transmitters by | | |
| providing special means, modes, or instructions that simulates or | | |
| characterizes a connection by enabling a transmitter. This can | | |
| greatly simplify a host manufacturer's determination that a module | | |
| as installed in a host complies with FCC requirements. | | |
| 2.10 Additional testing, Part 15 Subpart B disclaimer | \square | |
| The grantee should include a statement that the modular | DI C | |
| transmitter is only FCC authorized for the specific rule parts (i.e., | Please refer to user | |
| FCC transmitter rules) listed on the grant, and that the host product | manual. | |
| manufacturer is responsible for compliance to any other FCC rules | | |
| that apply to the host not covered by the modular transmitter grant | | |
| of certification. If the grantee markets their product as being Part | | |
| 15 Subpart B compliant (when it also contains | | |
| unintentional-radiator digital circuity), then the grantee shall | | |
| provide a notice stating that the final host product still requires Part | | |
| 15 Subpart B compliance testing with the modular transmitter | | |
| installed. | | |
