To Whom It May Concern

The following Metal Detectors models are similar:

1. Gold Bug
2. Gold Bug Pro
3. G2
4. Gold Bug DP

The models are similar in that the circuits in the Gold Bug, the Gold Bug Pro, G2 and the DP machines are exactly the same. They have the same PCB and are populated with the same components. The only differences among them are in software and pertain to how the data is handled after fetching it from the A/D and how is presented to the user. Transmit frequencies and power levels are exactly the same. Sensitivity of the Rx coil and circuitry are also the same. The DP model is shipped with the optional larger search-coil. Therefore emissions in are the same on the four models.

Sincerely,

Art Nemirow
