RE: Antenna declaration for Pocket Radar Model: SR1100, FCC ID: WZK-PR-1002

Attn: TCB Director

We, Invention Planet declare that the peak gain of 5.3 dBi used in the supporting paperwork and test reports for above mentioned model is the worst-case scenario based on the reference design from Texas Instruments, and since the final antenna is very similar but a little bit shorter, the gain of the final antenna will never be higher than 5.3dBi.

Sincerely,

A handwritten signature in black ink, appearing to read "Grant Moulton", is written over a light blue horizontal line.
