Federal Communications Commission
Laboratory Division
Equipment Authorization & Compliance

To Whom It May Concern,

Ondas Networks is an equipment manufacturer of wireless equipment for licensed frequency bands. Our customer, Aura Network Systems, placed a purchase order (see Exhibit 1) for wireless radios capable of operate in their exclusively held licenses in the 454 MHz band based upon their recent waiver. The contents of the waiver can be found at the following link:

<https://www.fcc.gov/document/wtb-grants-aura-network-systems-opco-llc-a2g-communications-waiver>

Specifically, we would like to reference this section of the waiver which allows for the authorization of equipment and lower power levels.

17. Accordingly, we will allow Petitioners to file modification applications on existing 450 MHz band licenses to add new ground transmitters to operate on authorized channels and provide additional, non-traditional general aviation air-ground services, including data services to non-airborne aviation subscribers operating unmanned aircraft. We will waive the relevant portions of sections 2.106, 22.99, 22.107(d), and 22.805, so that Petitioners may file such modification applications to operate additional ground stations to provide such supplemental service. Solely with respect to ground stations and mobile transmitters authorized and deployed for the purpose of providing UAS services, we will waive the section 22.809 minimum power requirements so that they may operate at lower power levels, consistent with the demands of AURA's new supplemental service. Finally, while any new ground stations authorized pursuant to this waiver will remain subject to the section 22.817 construction requirement, we waive the section 22.99 definition of "ground station" so that Petitioners may demonstrate compliance with the construction requirement with provision of service to either airborne or non-airborne aviation subscribers.

Aura Networks Systems is the exclusive operator of the wireless system in the frequencies and Ondas Networks is a supplier of equipment. AURA has requested that Ondas supply FCC certified equipment to them based on the waiver.

We respectfully request that the FCC proceed with the certification of Ondas' Mercury radio on behalf of our customer, AURA Network Systems

Sincerely,

A handwritten signature in blue ink that reads "Stewart Kantor".
