Certificate of Test 6879-6

The unit noted below has been tested by **R.N. Electronics Limited** and, where appropriate, conforms to the relevant subpart of FCC 47CFR Part 15. This is a certificate of test only and should not be confused with an equipment authorisation. Other standards may also apply.

| | |
|---|---|
| Equipment: | Jongo A2 |
| Model Number: | A240 |
| Proposed FCC ID: | X280068 |
| Unique Serial Number(s): | PP1-17, PP1-10 |
| Manufacturer: | PURE Imagination Technologies Home Park Industrial Estate Kings Langley Hertfordshire WD4 8LZ |
| Full measurement results are detailed in Report Number: | 05-6879-6-13 Issue 01 |
| Test Standards: | FCC 47CFR Part 15.247 effective date October 1st, 2012 Class DTS Intentional Radiator |

NOTE:

Certain tests were not performed based upon manufacturer's declarations. For details refer to section 3 of this report.

DEVIATIONS:

Deviations from the standards have been applied. For details refer to section 4.2 of this report.

This certificate relates only to the unit tested as identified by a unique serial number and in the condition at the time it was tested. It does not relate to any other similar equipment and performance of the product before or after the test cannot be guaranteed. Whilst every effort is made to assure quality of testing, type tests are not exhaustive and although no non-conformances may be found, this doesn't exclude the possibility of unit not meeting the intentions of the standard or the requirements of the Directive, particularly under different conditions to those during testing. Any compliance statements are made reliant on (a) the application of the product and use of the assigned band being acceptable to one or more national authorities within the EU and (b) the modes of operation as instructed to us by the Customer based on their specific knowledge of the application and functionality of the EUT. Statements of compliance, where measurements were made, do not include the measurement uncertainty. The measurement uncertainty, where stated, is the expanded uncertainty based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95%.

Date of Test: May 2nd to May 7th, 2013

Test Engineer: Daniel Sims

Approved By:
Technical Director.

Customer Representative:

2 Summary of test results

The **Jongo A2** was tested to the following standards: -

**FCC 47CFR Part 15.247 (effective date October 1st, 2012);
Class DTS Intentional Radiator**

Any compliance statements are made reliant on the modes of operation as instructed to us by the Manufacturer based on their specific knowledge of the application and functionality of the equipment tested. Whilst every effort is made to assure quality of testing, type tests are not exhaustive and although no non-conformances may be found, this doesn't exclude the possibility of equipment not meeting the intentions of the standard, particularly under different conditions to those during testing.

| Title | Reference | Results |
|--|---|--|
| 1. AC power line conducted emissions | FCC Part 15C §15.207 | PASSED |
| 2. Radiated emissions | FCC Part 15C §15.205, §15.209 and §15.247(d) | PASSED |
| 3. Occupied bandwidth | FCC Part 15C §15.215(c), §15.247(a)(2) | PASSED |
| 4. Maximum peak conducted output power | FCC Part 15C §15.247(b) | PASSED |
| 5. Frequency tolerance | FCC Part 15C §15.215(c) | NOT APPLICABLE ¹ |
| 6. Duty cycle | FCC Part 15C §15.35(c) | NOT APPLICABLE ² |
| 7. Power spectral density | FCC Part 15C §15.247(e) | PASSED |
| 8. Band edge compliance | FCC Part 15C §15.205, §15.209 and §15.247 | PASSED |
| 9. FHSS parameters | FCC Part 15C §15.247(a)(1) Dwell time and Number of hopping channels Frequency separation | NOT APPLICABLE ³ NOT APPLICABLE ³ |

¹No limits apply, however the requirement to contain the designated bandwidth of the emission within the specified frequency band includes the frequency stability of the transmitter over expected variations in temperature and supply voltage.

² No limits apply.

³ EUT does not employ FHSS technology.

3 Equipment Under Test (EUT)

3.1 Equipment specification

| | |
|--|--|
| Applicant | PURE Imagination Technologies, Home Park Industrial Estate Kings Langley Hertfordshire WD4 8LZ |
| Manufacturer of EUT | PURE |
| Brand name of EUT | Jongo A2 |
| Model number of EUT | A240 |
| Serial number of EUT | PP1-17, PP1-10 |
| Date when equipment was received by RN Electronics | April 29 th , 2013 |
| Date of test: | May 2 nd – May 7 th , 2013 |
| Visual description of EUT: | Small plastic enclosure with power/standby switch on the front, a Wi-Fi sync button on the bottom and all ports located on the rear. The unit comes supplied with a dedicated AC/DC adapter. |
| Main function of the EUT: | Wireless music streaming via Wi-Fi or Bluetooth. N.b. Bluetooth not under test. |
| Height | 55.5mm |
| Width | 108mm |
| Depth | 106mm |
| Weight | 0.22Kg |
| EUT supplied PSU: | |
| Manufacturer | PURE |
| Model number | KSAA0550100W1UV-1 |
| Serial number | KS015775 |
| Voltage input | 100-240VAC |
| Current required from above voltage source | 0.18A |
| Output | 5.5V dc, 1.0A |

3.2 EUT configurations for testing

| General parameters | |
|--|-------------------------------|
| EUT normal use position / classification | Desktop / mobile. |
| Choice of model(s) for type tests | Single variant |
| Antenna details | Wi-Fi inverted F PCB antenna |
| Antenna port | Integral antenna |
| Data port (yes/no)? | Yes |
| Highest signal generated in EUT | 2462MHz (Wi-Fi TX channel 11) |
| Lowest signal generated in EUT | 12MHz (USB clock) |

| TX parameters | |
|------------------------------------|---|
| Alignment range – transmitter | 2.412 - 2.462 GHz |
| EUT declared modulation parameters | DSSS: DBPSK; DQPSK; CCK (802.11b) OFDM: BPSK; QPSK; 16QAM; 64QAM (802.11g) |
| EUT declared power level | +16dBm |
| EUT declared signal bandwidths | 20MHz |
| EUT declared channel spacings | 5MHz |
| Declared frequency stability | +/-20ppm |
| RX parameters | |
| Alignment range – receiver | 2.412 - 2.462 GHz |
| EUT declared RX signal bandwidth | 20MHz |

3.3 Functional description

Pure "Jongo A2, A240" is part of the range of Wi-Fi connected audio products and is the first Hi-Fi adapter in this product family. It is intended to be installed and connected to an existing loudspeaker system, delivering new content (streamed or stored on the user's smart device) to existing equipment by streaming over Wi-Fi or Bluetooth (using integral pre-approved Bluetooth module, not under test in this report).

3.4 EUT Modes

| Mode reference | Description | Used for testing |
|-----------------|--|------------------|
| TX low channel | Constant TX modulated 2.412 GHz | Yes |
| TX mid channel | Constant TX modulated 2.437 GHz | Yes |
| TX high channel | Constant TX modulated 2.462 GHz | Yes |
| TX normal | Wi-Fi or Bluetooth packet transmission of audio data | No |

All Transmit modes were 100% duty cycle, modulated (except where stated otherwise), and left on the default max power setting.

The Transmit modes referred to above were checked in combination with the following table of modulation/ data rate schemes to fulfil the test requirements:-

| Mode | Rate |
|---------|----------|
| 802.11B | 1 Mbps |
| 802.11B | 2 Mbps |
| 802.11B | 5.5 Mbps |
| 802.11B | 11 Mbps |
| 802.11G | 6 Mbps |
| 802.11G | 9 Mbps |
| 802.11G | 12 Mbps |
| 802.11G | 18 Mbps |
| 802.11G | 24 Mbps |
| 802.11G | 36 Mbps |
| 802.11G | 48 Mbps |
| 802.11G | 54 Mbps |

Description of ancillary equipment connected to the equipment under test, for the purpose of tests, can be found in Section 10.

Any modifications made to the EUT, whilst under test, can be found in Section 11.

This report was printed on: 24 July 2013

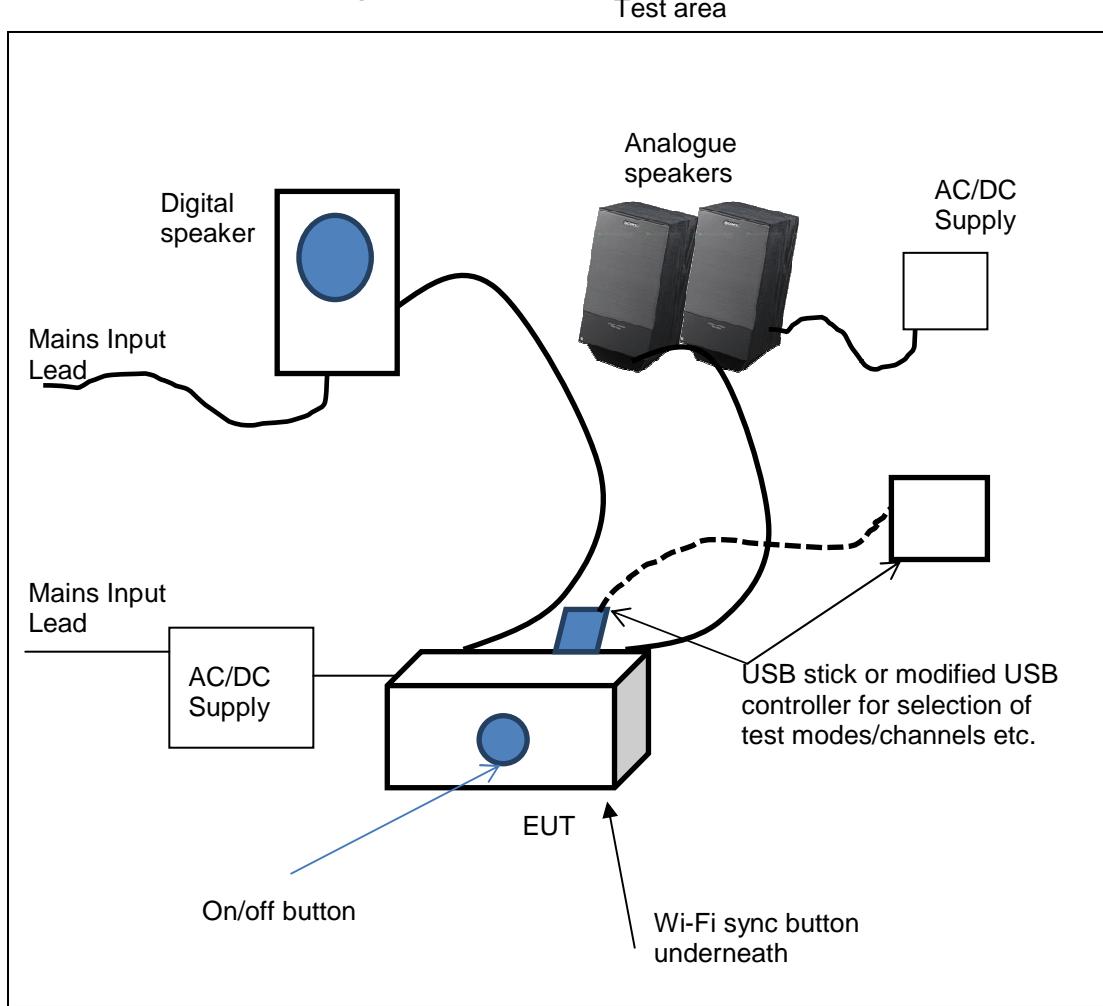

File name PURE.6879-6 ISSUE 01.DOCX

The contents of this report, apart from the referenced ANSI C63.4-2003, are beyond the scope of UKAS Testing Laboratory No. 2360 accreditation.

QMF21J – 3; 47CFR15.247, RNE ISSUE 01 SEP 2012

PAGE 6 OF 149

3.5 Emissions Configuration

The unit was powered from the dedicated AC/DC adapter provided with the unit. For conducted RF tests a second unit was provided with the internal antenna unsoldered and an SMA connector fitted in its place.

The units were configured with engineering menus in software which were accessed via a specially modified USB device which allowed permanent transmit and receive modes of the device on the top, middle and bottom channels as stated within section 3.4 of this report. The transmit mode was 100% continuous with modulation and the power settings for each channel were left at the default settings (level 20) in the software.

For radiated and conducted emissions tests the unit was populated with typical peripherals. The digital speaker port was populated with a digital speaker, the analogue Left & Right were populated with a pair of Analogue speakers and the USB port was populated with the Special USB device for control of the test modes required for tests. A standard USB stick was also used/checked connected to the unit for Conducted AC emissions tests.

2 identical units were provided for test, these were: - S/n PP1-10 for all radiated RF TX tests (and Conducted AC emissions) and S/n PP1-17 for all Conducted RF TX tests.

The AC/DC adapter was also placed on to the test table along with the main enclosure of the EUT.

A pre-approved Bluetooth USB dongle was permanently fitted inside the EUT enclosure and was powered/in operation during the course of the testing. The Bluetooth dongle was labelled FCC ID: **X2806M**.

4 Specifications

4.1 Relevant standards

The tests were performed by RN Electronics Engineer Daniel Sims who set up the tests, the test equipment, and operated it in accordance with the **R.N. Electronics Ltd** procedures manual and the basic standards listed below.

R.N. Electronics Ltd sites M and OATS are listed with the FCC. Registration Number 293246

| Reference | Standard Number | Year | Description |
|-----------|-----------------|------|--|
| 4.1.1 | FCC 47CFR15 | 2012 | Electromagnetic compatibility and radio spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 1: Common technical requirements |
| 4.1.2 | ANSI C63.10 | 2009 | American National Standard for Testing Unlicensed Wireless Devices |
| 4.1.3 | ANSI C63.4 | 2003 | American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz |
| 4.1.4 | KDB558074 | 2012 | Guidance for Performing Compliance Measurements on Digital Transmission Systems (DTS) Operating Under §15.247 |

4.2 Deviations

ANSI C63-10-2009 deviations:

The reference standard ANSI C63.4-2003 was used, not the latest ANSI C63.4-2009

FCC Part 15 deviations:

None.

4.3 Tests at extremes of temperature & voltage

Not Required.

N.b. for certain tests referenced to antenna port:

- A temporary internal RF port was used for testing.
- A test fixture was used for testing.
- A temporary RF port was created for testing.
- The equipment internal Antenna was used for testing.

4.4 Measurement uncertainties

| Parameter | Uncertainty |
|-----------------------------------|--|
| Transmitter Tests | |
| Conducted RF power | <± 1.0 dB |
| Occupied bandwidth | ± 1.9 % |
| Radiated RF power | ± 3.5 dB |
| Radiated spurious emissions | 30MHz - 1000MHz ±5.1dB 1000MHz - 2000MHz ±4.5dB 1 – 18 GHz ±3.5dB 18 – 26.5 GHz ±3.9dB |
| AC power line conducted emissions | (For LISN) 150kHz to 30MHz ±3.6dB |

5 Tests, methods and results

5.1 AC power line conducted emissions

5.1.1 Test Methods

Test Requirements FCC Part 15C, Reference (15.207)
Test Method: ANSI C63.10, Reference (6.2.)

5.1.2 Configuration Of EUT

The EUT and its AC/DC adapter were placed on a wooden table 0.8m above the ground plane and the adapter was connected to a LISN via a 1m mains cable.

Details of the Peripheral and Ancillary Equipment connected for this test is listed in section 11.

The EUT was operated in **TX low channel**, **TX mid channel** and **TX high channel** modes.

5.1.3 Test Procedure

Tests were made in accordance with FCC Part 15 using the measuring equipment noted in the 'Test Equipment Used' section. Measurements were made on the live and neutral conductors using both average and quasi-peak detection.
At least 6 signals within 20dB and/or all signals within 10dB of the limit were investigated.

Tests were performed in Test Site F.

5.1.4 Test Equipment Used

E150, E035, E410, E411, E412, E465, E186, E010

See Section 10 for more details.

5.1.5 Test results

Ambient conditions.

Temperature: 20 °C

Relative humidity: 27 %

No discernible difference was noted in emissions between channels (exploratory measurements), therefore the final measurements are presented for **TX mid channel** mode only.

Analyser plots showing Peak values can be found in Section 6.1 of this report.

Tables of signals measured.

Quasi-Peak and Average Live (TX mid channel)

| Signal No. | Freq (MHz) | Peak Amp (dBuV) | QP Amp (dBuV) | QP - Lim1 (dB) | AV Amp (dBuV) | AV - Lim1 (dB) |
|------------|------------|-----------------|---------------|----------------|---------------|----------------|
| 1 | 0.205 | 48.4 | 45.8 | -17.6 | 31.2 | -22.2 |
| 2 | 0.351 | 49.3 | 46.1 | -12.8 | 29.0 | -19.9 |
| 3 | 0.419 | 44.7 | 39.5 | -18.0 | 22.3 | -25.2 |
| 4 | 0.454 | 49.6 | 47.3 | -9.5 | 29.2 | -17.6 |
| 5 | 0.556 | 44.6 | 38.6 | -17.4 | 20.8 | -25.2 |

File name PURE.6879-6 ISSUE 01.DOCX

The contents of this report, apart from the referenced ANSI C63.4-2003, are beyond the scope of UKAS Testing Laboratory No. 2360 accreditation.

| Signal No. | Freq (MHz) | Peak Amp (dBuV) | QP Amp (dBuV) | QP - Lim1 (dB) | AV Amp (dBuV) | AV - Lim1 (dB) |
|------------|------------|-----------------|---------------|----------------|---------------|----------------|
| 6 | 0.636 | 45.2 | 40.0 | -16.0 | 20.4 | -25.6 |
| 7 | 0.712 | 46.1 | 43.3 | -12.7 | 24.9 | -21.1 |
| 8 | 1.028 | 42.7 | 36.8 | -19.2 | 21.7 | -24.3 |
| 9 | 1.060 | 43.2 | 38.5 | -17.5 | 22.1 | -23.9 |
| 10 | 1.097 | 41.2 | 37.8 | -18.2 | 21.1 | -24.9 |
| 11 | 1.357 | 41.6 | 38.0 | -18.0 | 22.0 | -24.0 |

Quasi-Peak and Average Neutral (TX mid channel)

| Signal No. | Freq (MHz) | Peak Amp (dBuV) | QP Amp (dBuV) | QP - Lim1 (dB) | AV Amp (dBuV) | AV - Lim1 (dB) |
|------------|------------|-----------------|---------------|----------------|---------------|----------------|
| 1 | 0.452 | 50.4 | 47.4 | -9.4 | 31.0 | -15.8 |
| 2 | 0.531 | 46.3 | 41.4 | -14.6 | 26.8 | -19.2 |
| 3 | 0.577 | 46.2 | 38.7 | -17.3 | 20.6 | -25.4 |
| 4 | 0.597 | 44.9 | 39.8 | -16.2 | 25.5 | -20.5 |
| 5 | 0.711 | 46.1 | 43.1 | -12.9 | 27.3 | -18.7 |
| 6 | 0.777 | 46.2 | 40.2 | -15.8 | 25.1 | -20.9 |
| 7 | 1.081 | 43.4 | 38.7 | -17.3 | 20.9 | -25.1 |
| 8 | 1.081 | 44.3 | 38.7 | -17.3 | 21.0 | -25.0 |
| 9 | 1.121 | 42.7 | 38.7 | -17.3 | 22.8 | -23.2 |
| 10 | 1.237 | 42.8 | 37.4 | -18.6 | 21.5 | -24.5 |
| 11 | 1.352 | 42.9 | 39.4 | -16.6 | 23.8 | -22.2 |
| 12 | 1.370 | 40.9 | 37.4 | -18.6 | 22.1 | -23.9 |

These results show that the **EUT** has **PASSED** this test.

5.2 Radiated emissions

5.2.1 Test Methods

Test Requirements: FCC Part 15C, Reference (15.209)
Test Method: ANSI C63.4, Reference (8)

5.2.2 Configuration Of EUT

The EUT was placed on a 0.8 metres high turntable. The front edge of the EUT was initially positioned facing the antenna. The EUT was measured at a distance of 3 metres. The EUT was measured in its normal use position (mobile device).

The EUT was operated in **TX low channel**, **TX mid channel** and **TX high channel** modes.

5.2.3 Test Procedure

Tests were made in accordance with FCC Part 15 using the measuring equipment noted below.

Below 30MHz, measurements were made in a semi-anechoic chamber (pre-scan) with any final measurements required performed on an OATS without a ground plane. The antenna was placed 1m above the ground. The equipment and the antenna were rotated 360° to record the worst case emissions.

30MHz - 1GHz, measurements were made on a site listed with the FCC. The equipment was rotated 360° and the antenna scanned 1 – 4 metres in both horizontal and vertical polarisations to record the worst case emissions.

Above 1GHz, measurements were made in a semi-anechoic chamber with appropriate absorbing material for use in this range. Horn antennas were used at heights where the whole of the EUT was contained within the main beam. The EUT was rotated through 360° to record the worst case emissions.

At least 6 signals within 20dB and all signals within 10dB of the limit were investigated.

Radiated emissions tests were performed using Test Site M.

5.2.4 Test Equipment Used

N240, E268, E410, E411, E412, E429, E533, E534, E535, TMS78, TMS79, TMS81, TMS82, TMS933

See Section 10 for more details

5.2.5 Test Results

Ambient conditions

Temperature: 18-21 °C Relative humidity: 27-33 %

Analyser plots showing Peak values can be found in Section 6.2 of this report.

Note: EUT tested in a continuous transmit mode for ease of test.

No discernible difference was noted in emissions between channel settings in the test ranges 150k-30MHz and 30-1000MHz (exploratory measurements), therefore final measurements are presented for **TX mid channel** mode only for these test ranges.

The 1Mbps data rate was found to yield the highest emission amplitudes and has been used for final measurements.

5.2.5.1 Below 30MHz.

Plot references for Low Frequency Radiated emissions measurements
(150kHz to 30MHz)

| Channel | Parallel Plots | Perpendicular Plots |
|-------------|---|--|
| Mid channel | 6879-6 Parallel 150k-30MHz Mid channel TX | 6879-6 Perpendicular 150k-30MHz Mid channel TX |

5.2.5.2 30MHz - 1GHz.

Plot references for Radiated emissions measurements (30-1000MHz)

| 21.5-25GHz | Vertical | 6879-6 Vertical 21.5-25GHz Mid channel |

Note: Whilst Low, Mid and High channels were tested, plots are for illustrative purposes only and only **Mid channel** plots are shown in this report.

LIMITS:

15.209 limits are applicable in the restricted bands of 15.205 with the relevant detector.
15.247(d) other emissions, outside the intentional band, must be attenuated by at least 20dB from the level of the fundamental / meet the general limits of 15.209.

n.b. the general limits of 15.209 are as drawn on the respective plots.

These show that the **EUT** has **PASSED** this test.

5.3 Occupied bandwidth

5.3.1 Test Methods

Test Requirements: FCC Part 15C, Reference (15.215)
Test Method: ANSI C63.10, Reference (6.9)

5.3.2 Configuration Of EUT

The EUT was tested on a bench. Measurements were made at the temporary internal RF port. The EUT was operated in **TX low channel** and **TX mid channel** and **TX high channel** modes.

5.3.3 Test Procedure

Tests were performed using Test Site A.

Tests were made in accordance with FCC Part 15 using the measuring equipment noted below. A 120kHz RBW, 3x VBW, auto sweep time and max hold settings were used for the 6dB bandwidth.

5.3.4 Test Equipment Used

E251, E252, E533, E534, E535

See Section 10 for more details.

5.3.5 Test Results

Ambient conditions.

Temperature: 24 °C

Relative humidity: 30 %

Pressure: 102 mbar

Analyser plots for the 6dB bandwidth can be found in Section 6.3 of this report.

LIMITS:

15.247(a)(2) The minimum 6dB bandwidth shall be at least 500kHz.

These results show that the EUT has **PASSED** this test.

5.4 Maximum peak conducted output power

5.4.1 Test Methods

Test Requirements
Test Method:

FCC Part 15C, Reference (15.247)
ANSI C63.10, Reference (6.10.2.1 b))

5.4.2 Configuration Of EUT

The EUT was measured on a bench using a spectrum analyser connected to the temporary internal RF port.

The EUT was operated in **TX low channel** and **TX mid channel** and **TX high channel** modes for this test.

The EUT was set to each mode and test signal in turn (see section 3.4) and highest power levels recorded.

5.4.3 Test Procedure

Tests were made in accordance with FCC Part 15 using the measuring equipment noted below. Peak stated reading is maximum power observed using a spectrum analyser channel power function over the 6dB bandwidth + 1MHz using a 1MHz RBW, per ANSI C63.10.

Measurements were made on a test bench in site A.

5.4.4 Test Equipment Used

E251, E266, E342, E252

See Section 10 for more details

5.4.5 Test results

Ambient conditions.

Temperature: 22 °C

Relative humidity: 40 %

Pressure: 101 mbar

Radio Parameter1

| | |

LIMITS:

15.247(b)(3)

For systems using digital modulation in the 902-928, 2400-2483.5 or 5725-5850 MHz bands 1 Watt.

These results show that the EUT has **PASSED** this test.

5.5 Frequency tolerance

NOT APPLICABLE: No limits apply, however the requirement to contain the designated bandwidth of the emission within the specified frequency band includes the frequency stability of the transmitter over expected variations in temperature and supply voltage

5.6 Duty cycle

NOT APPLICABLE: There is no limit defined in the standard. It was, however, confirmed by observation that the continuous test mode provided was 100% duty.

5.7 Maximum power spectral density

5.7.1 Test Methods

Test Requirements: FCC Part 15C, Reference (15.247)
Test Method: KDB558074, PSD Option 1

5.7.2 Configuration Of EUT

The EUT was configured as for the peak conducted power test. The EUT was operated in **TX low channel** and **TX mid channel** and **TX high channel** modes for this test.

5.7.3 Test Procedure

Tests were performed using Test Site A.

Tests were made in accordance with FCC Part 15 using the measuring equipment noted below. The emission from the EUT was maximised before taking any plots. PEP was recorded in the required span and bandwidth. Measurements/plots were taken with the span set to 1.5 times the measured DTS bandwidth for each modulation scheme setting.

5.7.4 Test Equipment Used

E251, E533, E534, E535, E252

See Section 10 for more details.

5.7.5 Test results

Ambient conditions.

Temperature: 23°C

Relative humidity: 42%

Pressure: 101mbar

Radio Parameter 1

| | |
|------------------------|-----------------|
| Band | 2400-2483.5 MHz |
| Power level | 16 dBm |
| Channel spacing | 5 MHz |
| Mod scheme | 1 MBPS |
| Low channel | 2412 MHz |
| Mid channel | 2437 MHz |
| High channel | 2462 MHz |

Results relating to Radio Parameters 1

| | Low | Mid | High |
|--------------------------|--------------------|--------------------|--------------------|
| Antenna Gain (dB) | 1.7 | 1.7 | 4.5 |
| Duty Cycle (%) | 100 | 100 | 100 |
| dBm per 3kHz | -10.9 | -10.6 | -10.1 |
| Plot reference | J6879-6, Plot 0040 | J6879-6, Plot 0052 | J6879-6, Plot 0064 |

Radio Parameter 2

| | |
|------------------------|-----------------|
| Band | 2400-2483.5 MHz |
| Power level | 16 dBm |
| Channel spacing | 5 MHz |
| Mod scheme | 2 MBPS |
| Low channel | 2412 MHz |
| Mid channel | 2437 MHz |
| High channel | 2462 MHz |

Results relating to Radio Parameters 2

| | Low | Mid | High |
|--------------------------|--------------------|--------------------|--------------------|
| Antenna Gain (dB) | 1.7 | 1.7 | 4.5 |
| Duty Cycle (%) | 100 | 100 | 100 |
| dBm per 3kHz | -8.7 | -8.4 | -7.7 |
| Plot reference | J6879-6, Plot 0041 | J6879-6, Plot 0053 | J6879-6, Plot 0065 |

Radio Parameter 3

| | |
|------------------------|-----------------|
| Band | 2400-2483.5 MHz |
| Power level | 16 dBm |
| Channel spacing | 5 MHz |
| Mod scheme | 5.5 MBPS |
| Low channel | 2412 MHz |
| Mid channel | 2437 MHz |
| High channel | 2462 MHz |

Results relating to Radio Parameters 3

| | Low | Mid | High |
|--------------------------|--------------------|--------------------|--------------------|
| Antenna Gain (dB) | 1.7 | 1.7 | 4.5 |
| Duty Cycle (%) | 100 | 100 | 100 |
| dBm per 3kHz | -9.8 | -8.9 | -8.8 |
| Plot reference | J6879-6, Plot 0042 | J6879-6, Plot 0054 | J6879-6, Plot 0066 |

Radio Parameter 4

| | |
|------------------------|-----------------|
| Band | 2400-2483.5 MHz |
| Power level | 16 dBm |
| Channel spacing | 5 MHz |
| Mod scheme | 11 MBPS |
| Low channel | 2412 MHz |
| Mid channel | 2437 MHz |
| High channel | 2462 MHz |

LIMITS:

15.247(e) +8dBm/3kHz.

Any Analyser plots can be found in Section 6.5 of this report.

These results show that the EUT has **PASSED** this test.

5.8 Band Edge Compliance

5.8.1 Test Methods

Test Requirements: FCC Part 15C, Reference (15.215 and 15.247)
Test Method: ANSI C63.10-2009, Reference clause 6.9.3

5.8.2 Configuration Of EUT

The EUT was placed on a 0.8 metres high turntable. The front edge of the EUT was initially positioned facing the antenna. The EUT was measured at a distance of 3 metres.

The EUT was operated in **TX low channel** and **TX high channel** modes.

5.8.3 Test Procedure

Tests were made in accordance with FCC Part 15 using the measuring equipment noted below. The emission from the EUT was maximised before taking the plots.

Tests were performed using Test Site M.

5.8.4 Test Equipment Used

E268, E411, E412, TMS82, E252

See Section 10 for more details.

5.8.5 Test results

Ambient conditions.

Temperature: 18-20 °C Relative humidity: 28-33 %

Pressure: 101 mbar

Analyser plots for the Band Edge Compliance can be found in Section 6.4 of this report. These show the 20dBc requirement of 15.247(d) are met at the band edges of 2400 and 2483.5 MHz. Restricted band edge plots are also shown in section 6.4.

The following tables list the field strengths observed in the adjacent restricted bands, which are required to meet the tighter 15.209 limits:

Radio Parameter 1

| | |
|------------------------|-----------------|
| Band | 2400-2483.5 MHz |
| Power level | 16 dBm |
| Channel spacing | 5 MHz |
| Mod scheme | 1 MBPS |
| Low channel | 2412 MHz |
| High channel | 2462 MHz |

Restricted Band Edge Results relating to Radio Parameters 1

| | Low | High |

|--|--|---|
| Peak Level (dBμV/m) | 53.5 | 52.1 |
| Peak Plot reference | J6879-6, Band edge PK (1MRBW) Low chan 54MBPS | J6879-6, Band edge PK (1MRBW) High chan 54MBPS |
| Average Level (dBμV/m) | 42.4 | 41.3 |
| Average Plot reference | J6879-6, Band edge AV (1MRBW) Low chan 54MBPS | J6879-6, Band edge AV (1MRBW) High chan 54MBPS |

Band Edge Results relating to Radio Parameters 12

| | Low | High |
|---------------------------|--|---|
| Plot reference | J6879-6, Band edge PK (100kRBW) Low chan 54MBPS | J6879-6, Band edge PK (100kRBW) High chan 54MBPS |

The band edge readings were performed with a peak detector (max held plot) and with the EUT set in a constant 100% transmit state.

Limits: AV = 54dB μ V/m at band edges
PK = 74dB μ V/m at band edges

The restricted band edges closest to the EUT frequency of 2400-2483.5MHz are 2390 & 2483.5MHz.

Further wider span plots have been taken to show the fact that there are no spurious emissions above the restricted limits of 15.209.

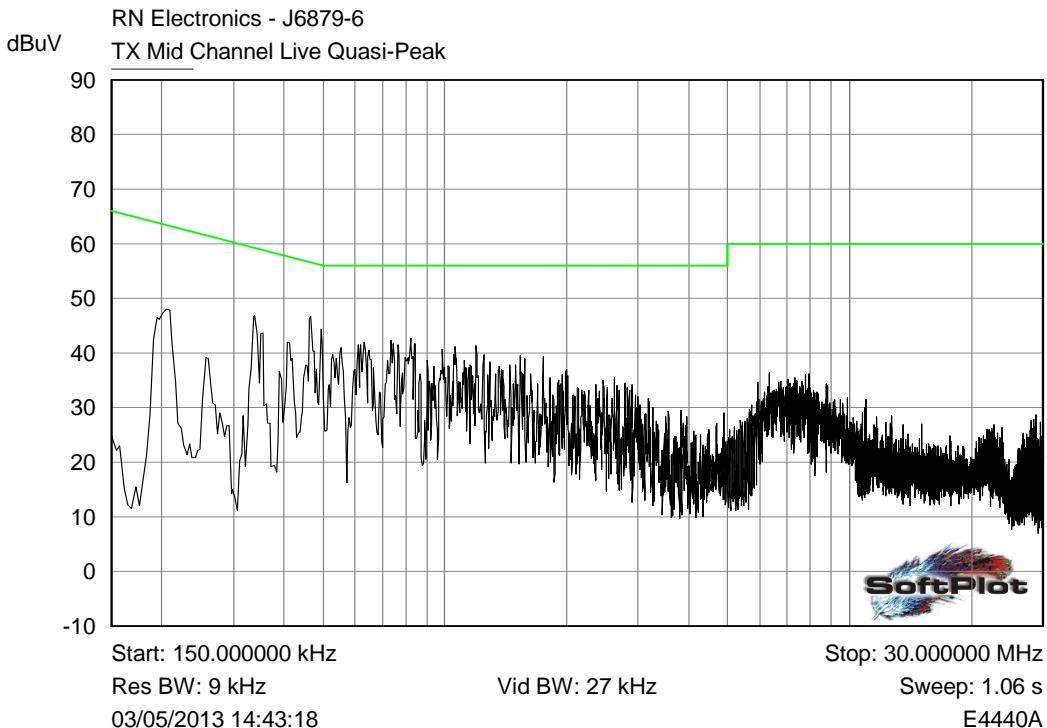

These results show that the **EUT** has **PASSED** this test.

5.9 FHSS Parameters

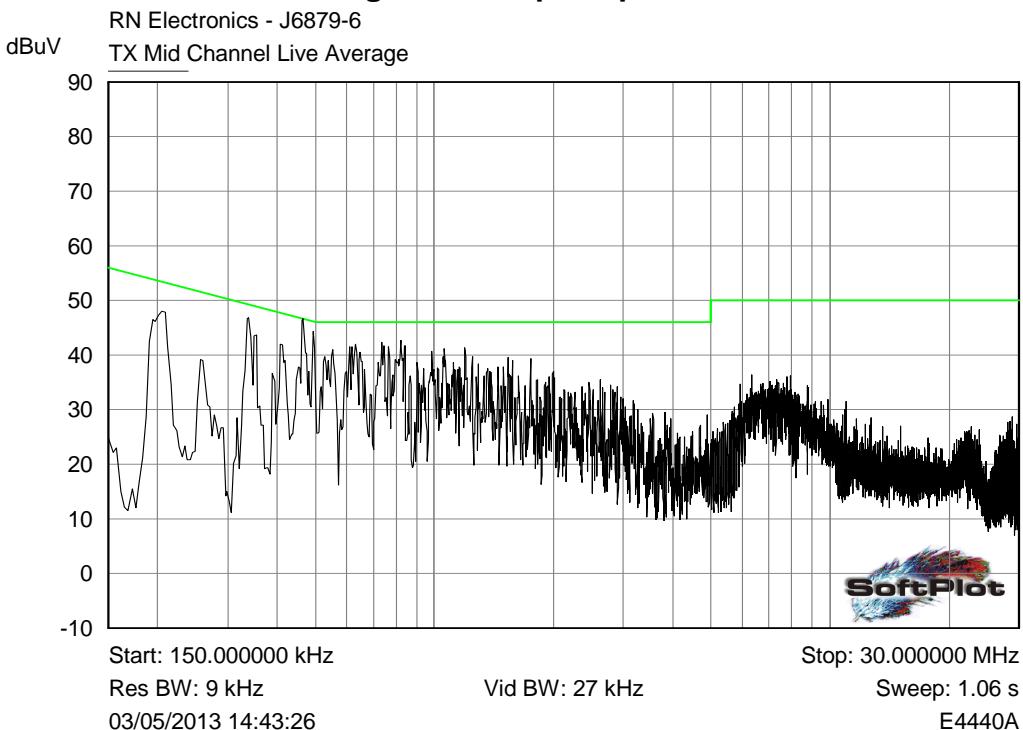

Not Applicable. EUT does not employ FHSS technology.

6 Plots and Results

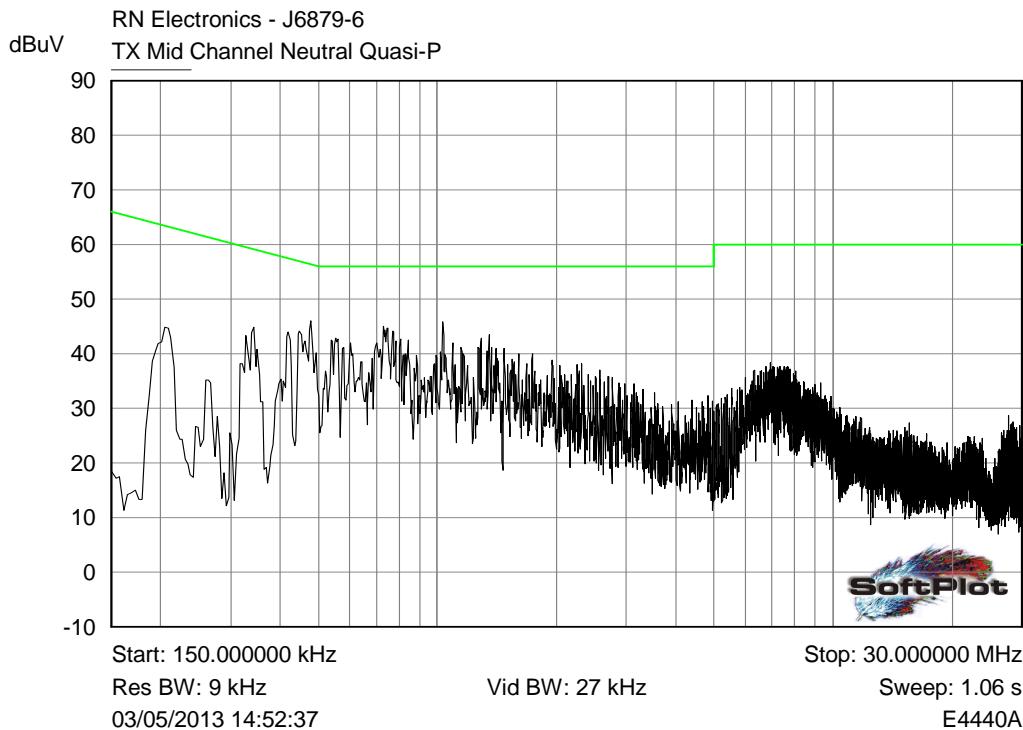

6.1 AC power line conducted emissions plots

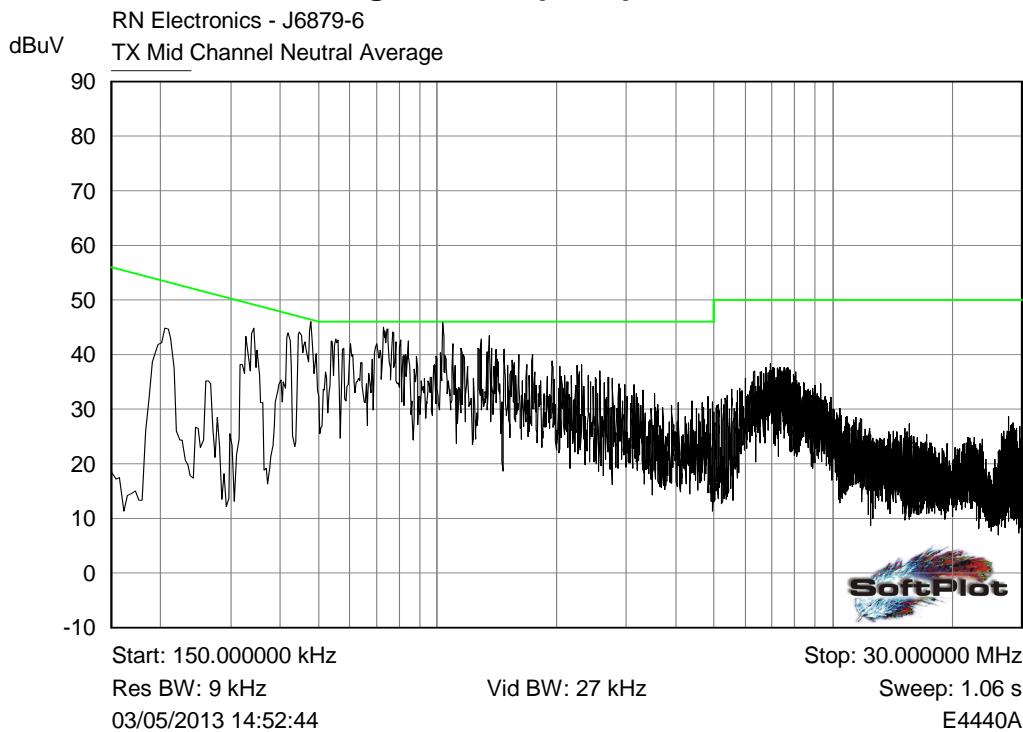

Plot of peak emissions 150kHz - 30MHz on the TX mid channel live terminal against the quasi-peak limit line.

Plot of peak emissions 150kHz - 30MHz on the TX mid channel live terminal against the average limit line.

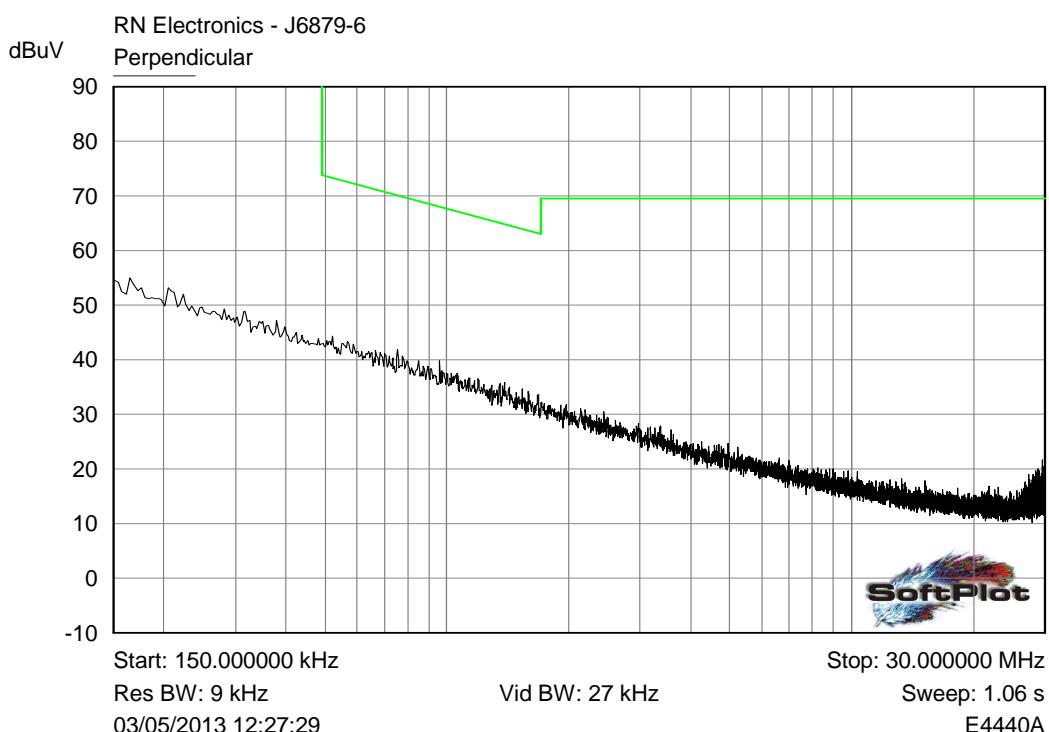

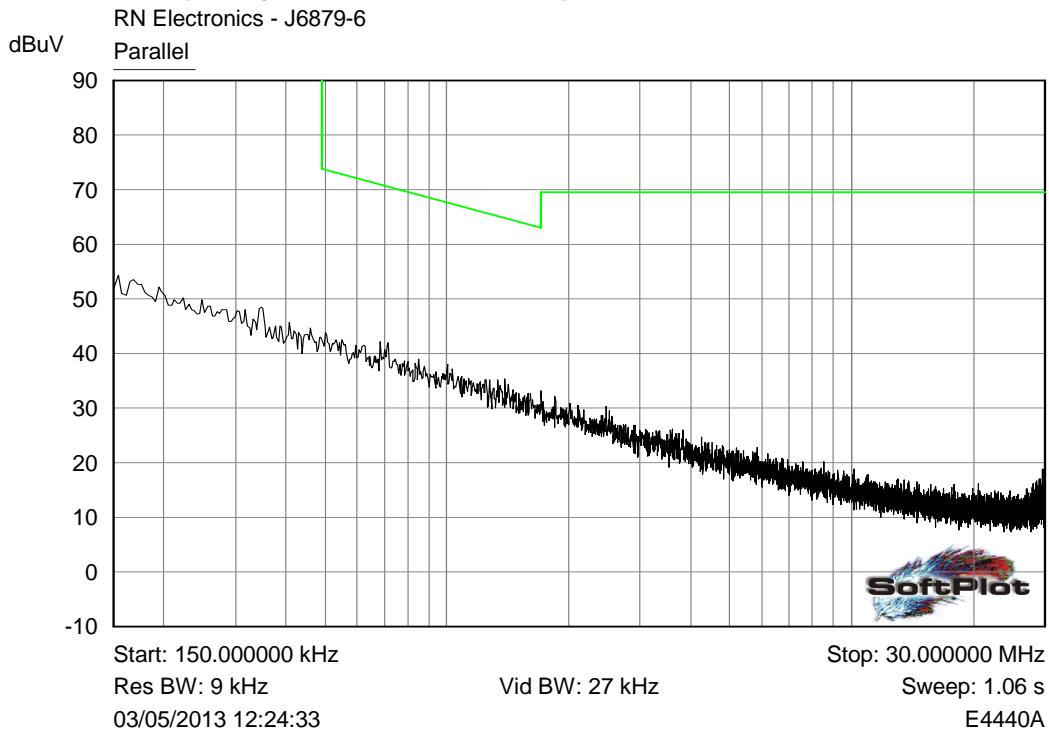

Plot of peak emissions 150kHz - 30MHz on the TX mid channel neutral terminal against the quasi-peak limit line.

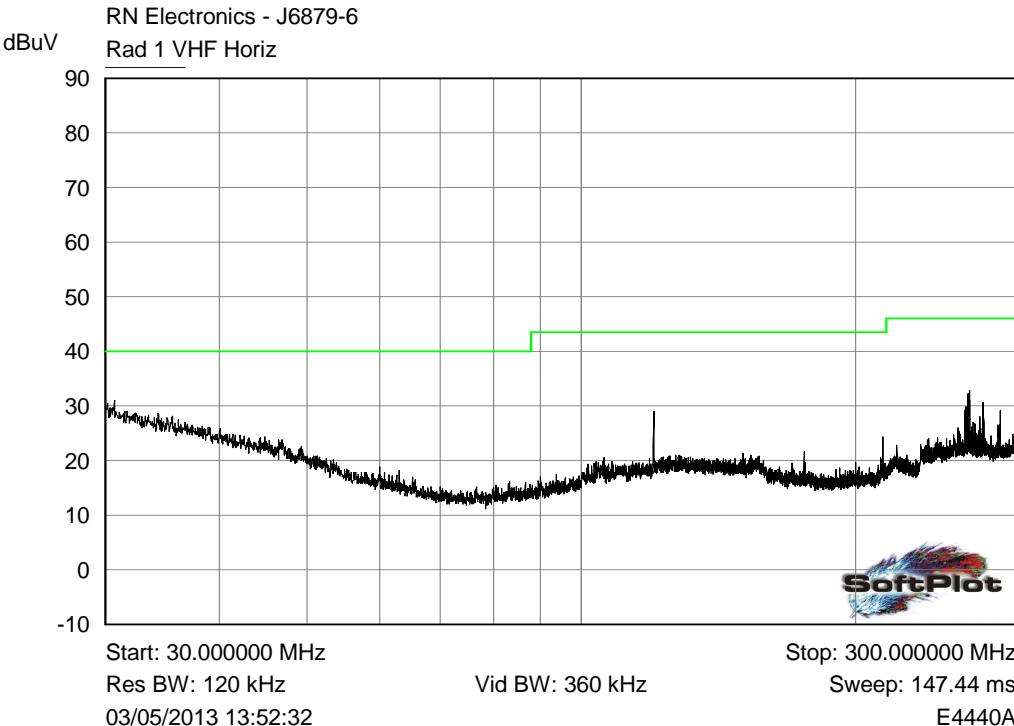

Plot of peak emissions 150kHz - 30MHz on the TX mid channel neutral terminal against the average limit line.

6.2 Radiated emissions plots

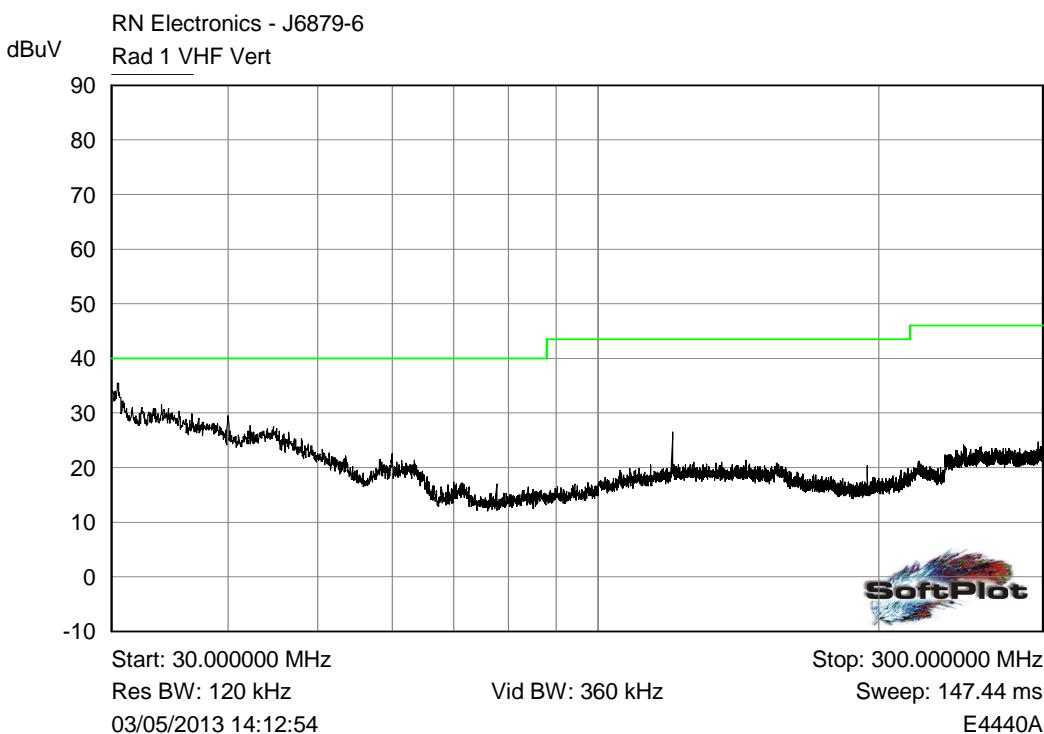

6.2.1 Low frequency radiated emissions plots

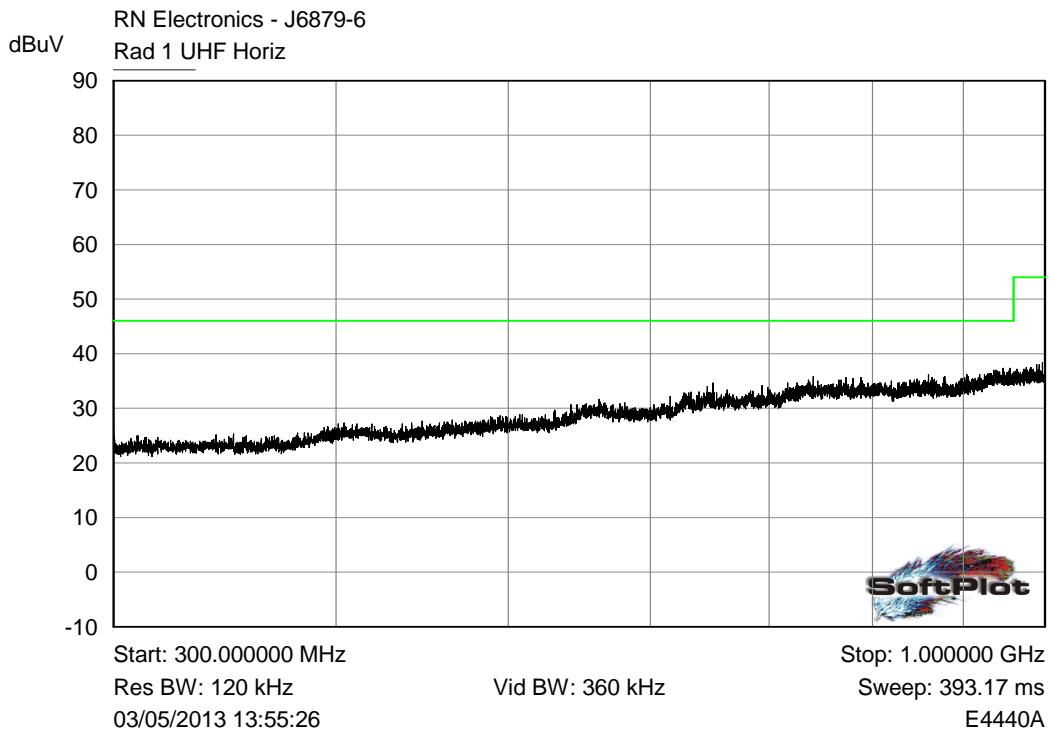

6.2.2 Radiated emissions - 30MHz - 1GHz

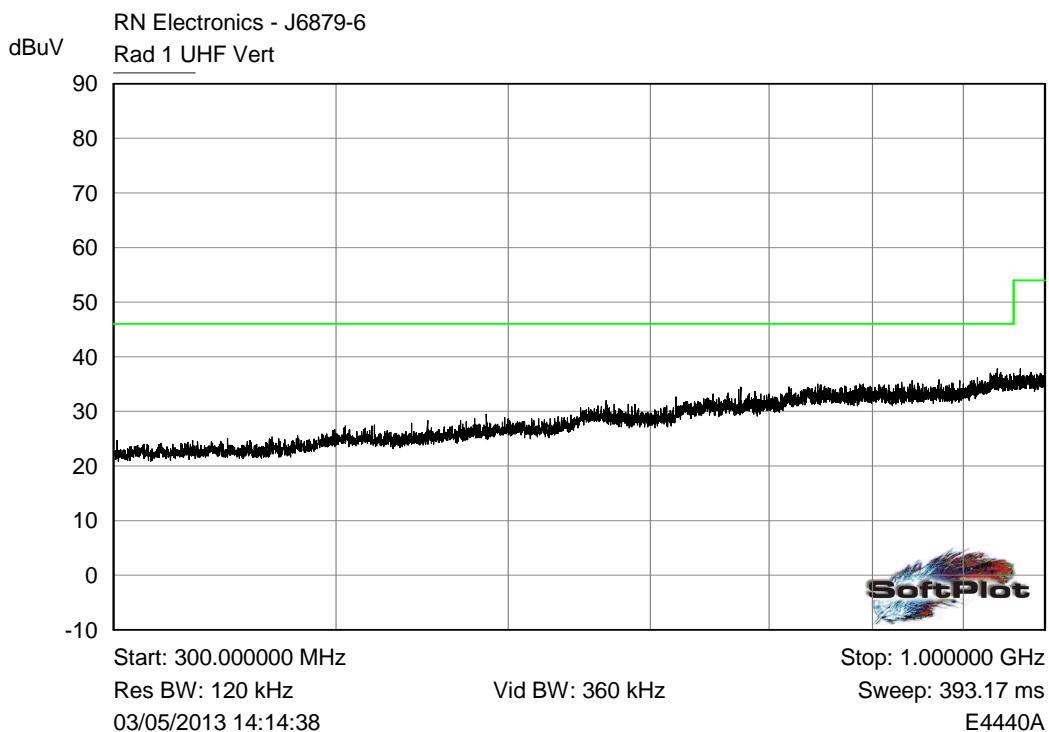

TX mid channel: Plot of peak horizontal emissions 30MHz - 300MHz against the quasi-peak limit line.

TX mid channel: Plot of peak vertical emissions 30MHz - 300MHz against the quasi-peak limit line.

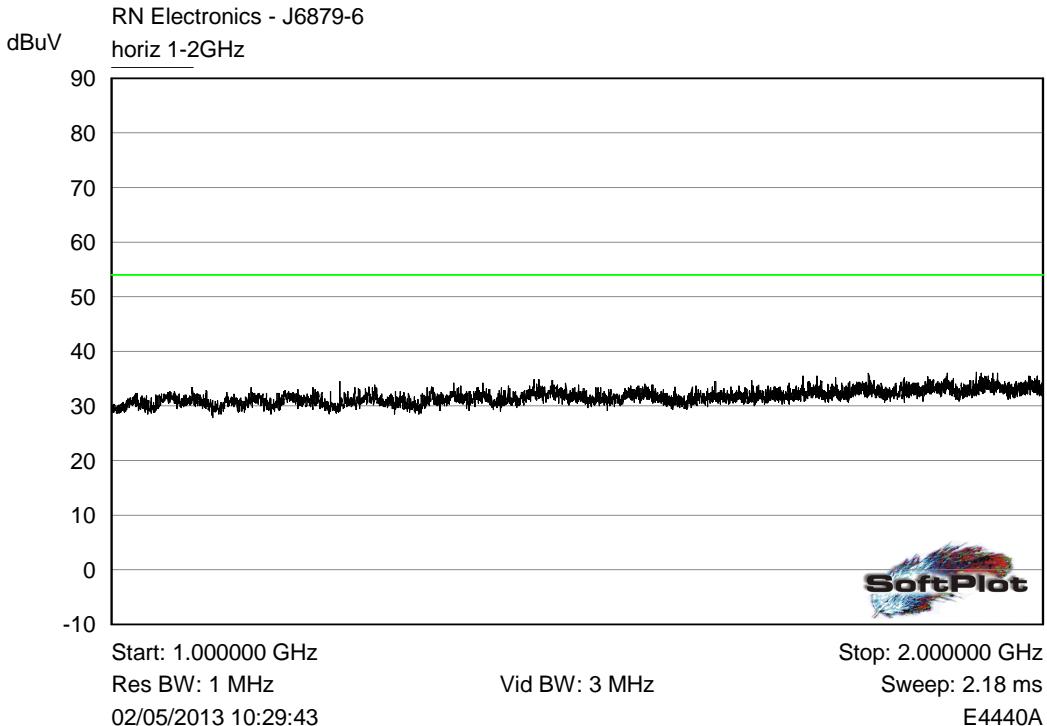

TX mid channel: Plot of peak horizontal emissions 300MHz - 1GHz against the quasi-peak limit line.

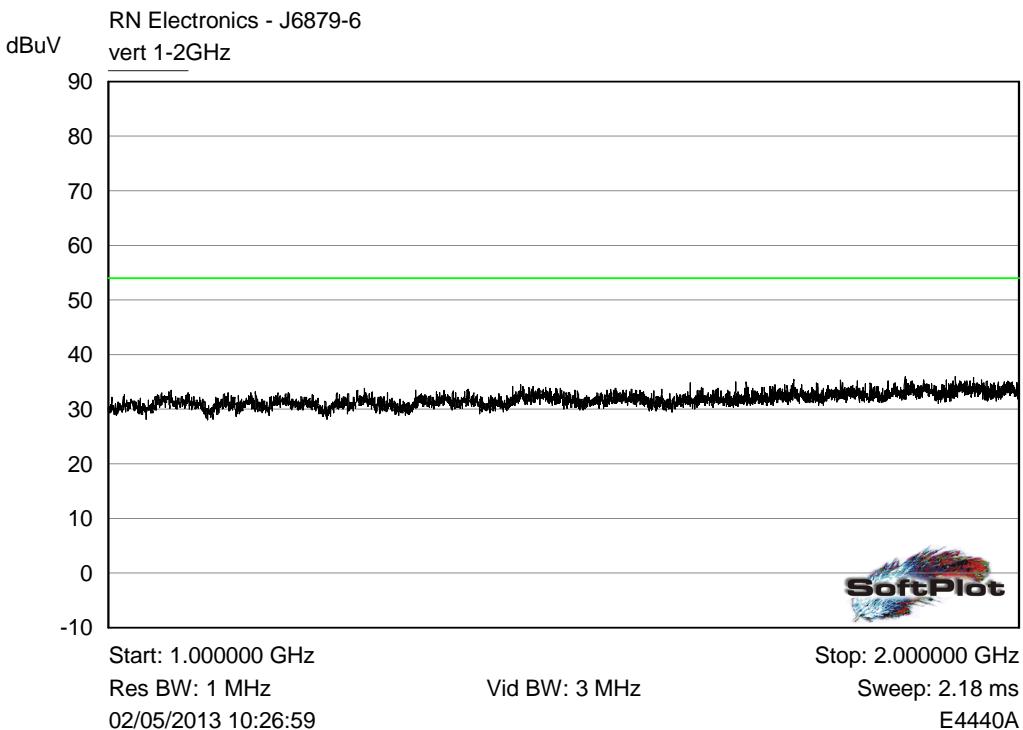

TX mid channel: Plot of peak vertical emissions 300MHz - 1GHz against the quasi-peak limit line.

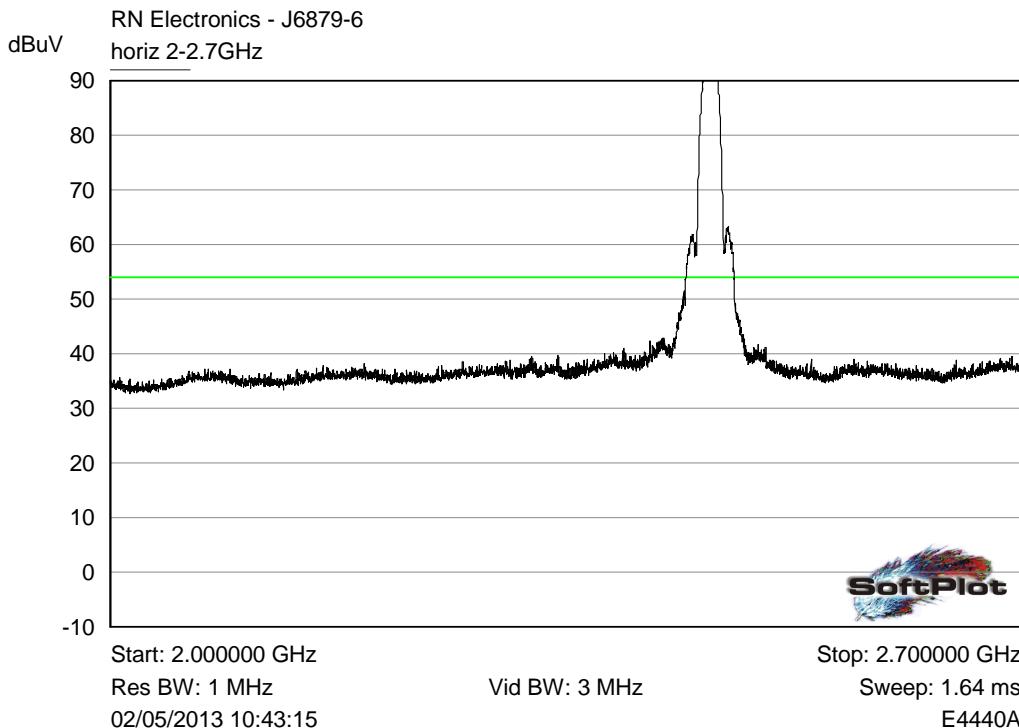

6.2.3 Radiated emissions Plots above 1GHz

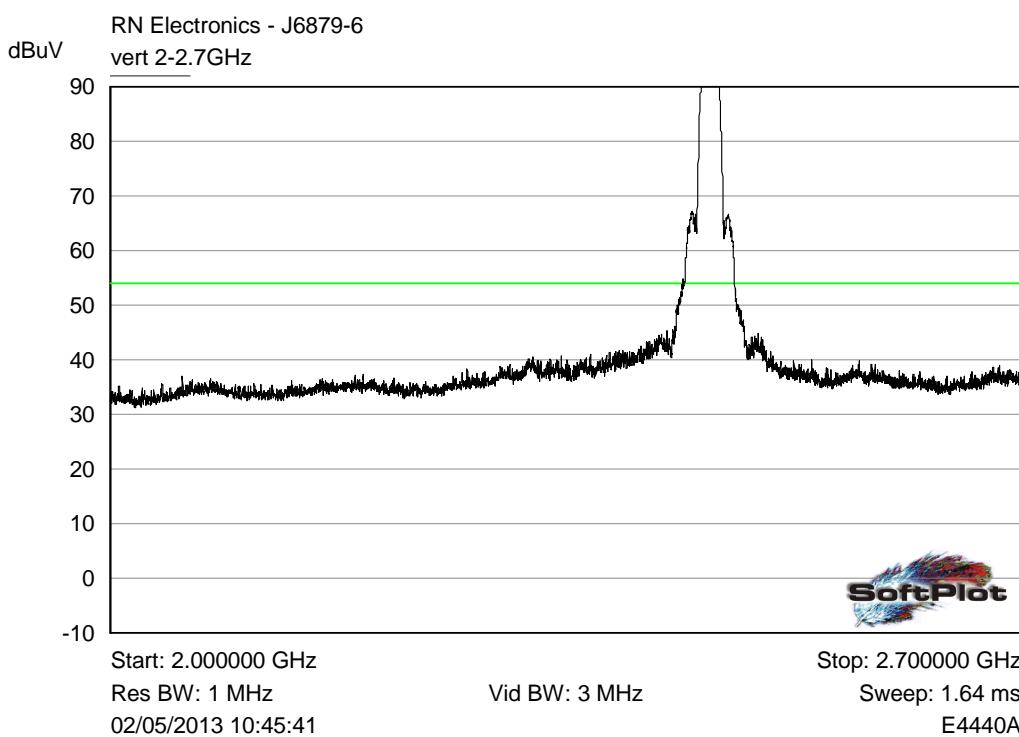

Middle channel (2437 MHz) - 1-2GHz - Horizontal

Middle channel (2437 MHz) - 1-2GHz - Vertical

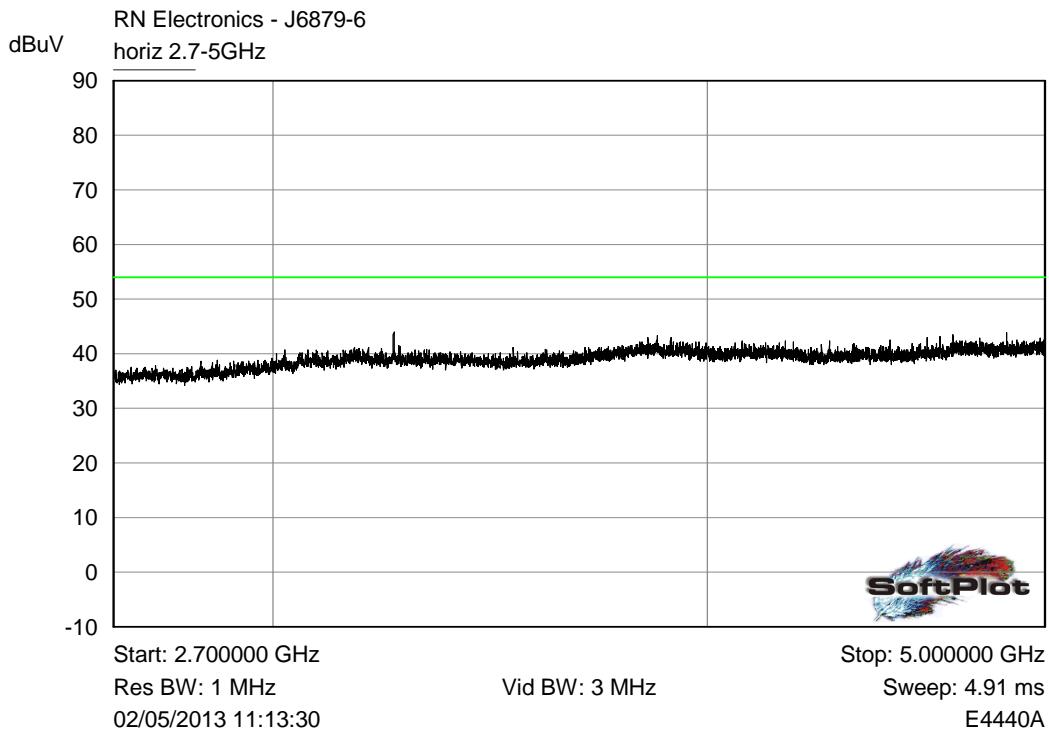

Middle channel (2437 MHz) - 2-2.7GHz - Horizontal

7 Explanatory Notes

7.1 Explanation of Table of Signals Measured

Measurements are made as required by the standard. These measurements are made and recorded using detectors, either peak, quasi peak or average dependant on the test. A table of results has been given following the relevant plots. This table looks similar to the one illustrated below dependant on the measurements required by the test: -

| Signal No. | Freq (MHz) | Peak Amp (dB μ V) | Pk – Lim 1 (dB) | QP Amp (dB μ V) | QP - Lim1 (dB) | Av Amp (dB μ V) | Av - Lim1 (dB) |
|------------|---------------|--------------------------|--------------------|------------------------|-------------------|------------------------|-------------------|
| 1 | 12345 | 54.9 | -10.5 | 48.0 | -12.6 | 37.6 | -14.4 |

Column One - Labelled Signal No. is an incremental number that the receiver has given to each signal that has been measured.

Column Two - Labelled Freq (MHz) is the approximate frequency of the signal received.

Column Three - Labelled Peak Amp (dB μ V) is the level of received signal that was measured in dB above 1 μ V using the peak detector.

Column Four - Labelled Pk - Lim1 (dB) is the difference in level from the peak signal given to the active limit line. If this column appears in the table the peak detector measurement is required by the standard for this test. The results entered in this column indicate the signal level relative to the compliance limit required. Negative numbers indicate that the product is compliant.

Column Five - Labelled QP Amp (dB μ V) is the level of received signal that was measured in dB above 1 μ V using the quasi-peak detector.

Column Six - Labelled QP - Lim1 (dB) is the difference in level from the quasi-peak signal given to the active limit line. If this column appears in the table the quasi-peak detector measurement is required by the standard for this test. The results entered in this column indicate the signal level relative to the compliance limit required. Negative numbers indicate that the product is compliant.

Column Seven - Labelled Av Amp (dB μ V) is the level of received signal that was measured in dB above 1 μ V using the average detector.

Column Eight - Labelled Av - Lim1 (dB) is the difference in level from the average signal given to the active limit line. If this column appears in the table the average detector measurement is required by the standard for this test. The results entered in this column indicate the signal level relative to the compliance limit required. Negative numbers indicate that the product is compliant.

Only signals highlighted in red are deemed to exceed the limit of the detector required.

7.2 Explanation of limit line calculations for radiated measurements

The limits given in the test standard are normally expressed as absolute values (e.g. in $\mu\text{V}/\text{m}$ at a specified distance), whereas the measured values are expressed as peak, quasi peak or average values in $\text{dB}\mu\text{V}/\text{m}$ referenced to the measuring instrument inputs. RN Electronics calibrate the test set-up to account for any path losses, antenna gains, etc. so that the value read at the receiver relates directly to the absolute value required, except that it is expressed in dB relative to one microVolt and may need to take account of any alternative measuring distance used. Examples:

- (a) limit of 500 $\mu\text{V}/\text{m}$ equates to $20.\log(500) = 54 \text{ dB } \mu\text{V}/\text{m}$.
- (b) limit of 300 $\mu\text{V}/\text{m}$ at 10m equates to $20.\log(300 \cdot 10/3) = 60 \text{ dB } \mu\text{V}/\text{m}$ at 3m
- (c) limit of 30 $\mu\text{V}/\text{m}$ at 30m, but below 30MHz, equates to $20.\log(30) + 40.\log(30/3) = 69.5 \text{ dB}\mu\text{V}/\text{m}$ at 3m, as extrapolation factor below 30MHz is 40dB/decade per 15.31(f)(2).

11 Auxiliary equipment

11.1 Customer supplied Equipment

Auxiliary equipment used for the purpose of test supplied by the above has been listed below

| Item No. | Model No. | Description | Manufacturer | Serial No. |
|----------|-----------|-------------------------|--------------|------------|
| 1 | D300i | Modified USB controller | Pure | Not stated |
| 2 | MA-15D | Digital speakers | EDIROL | AU40641J |

11.2 Supplied by RN Electronics Limited

Auxiliary equipment used for the purpose of test supplied by the above has been listed below

| RN No. | Model No. | Description | Manufacturer | Serial No. |
|--------|-----------|-----------------|--------------|------------|
| N505 | Z130 | Stereo Speakers | Logitech | 302 |
| - | - | 256MB USB stick | RN | - |

12 Modifications

In order for the EUT to produce the results shown within this report the following modifications, if any, were implemented.

12.1 Modifications before test

There were no modifications made by R.N. Electronics Ltd before testing commenced.

12.2 Modifications during test

There were no modifications made by R.N. Electronics Ltd during testing.

13 Compliance information

Products subject to the Declaration of Conformity procedure are required to be supplied with a compliance information statement. A copy of this statement may be included here:

CERTIFIED equipment – DoC not required².

² n.b. the EUT USB port does not connect to a PC, hence it is not a PC peripheral either.

14 Description of Test Sites

| | |
|-----------|--|
| Site A | Radio / Calibration Laboratory and anechoic chamber |

| °C | Degrees Celsius | min | minimum |
| CFR | Code of Federal Regulations | mm | millimetres |
| CS | Channel Spacing | ms | milliseconds |
| CW | Continuous Wave | mW | milliWatts |
| dB | deciBels | NA | Not Applicable |
| dBµV | deciBels relative to 1µV | OATS | Open Area Test Site |
| dBc | deciBels relative to Carrier | OFDM | Orthogonal Frequency Division Multiplexing |
| dBm | deciBels relative to 1mW | ppm | Parts per million |
| DC | Direct Current | QAM | Quadrature Amplitude Modulation |
| EIRP | Equivalent Isotropic Radiated Power | QPSK | Quadrature Phase Shift Keying |
| ERP | Effective Radiated Power | Ref | Reference |
| EUT | Equipment Under Test | RF | Radio Frequency |
| FCC | Federal Communications Commission | RTP | Room Temperature and Pressure |
| FM | Frequency Modulation | s | Seconds |
| FSK | Frequency Shift Keying | Tx | Transmitter |
| g | Grams | V | Volts |
| GHz | GigaHertz | | |
