

RF Test Report

Project Number: 5002314

Offer Number: SUW-202210003592

Report Number: 5002314EMC01

Revision Level: 1

Client: iKeyless, LLC

Equipment Under Test: Keyless Entry Remote Control

Model / HVIN: HNHKL-G050

FCC ID: X32-HNHKG050

IC: 8797A-HNHKG050

Applicable Standards: FCC Part 15 Subpart C, § 15.231 Periodic Operation in the band 40.66-40.77MHz and above 70MHz

ANSI C63.10: 2013

RSS-210, Issue 10 (Annex A)

RSS-GEN Issue 5

Report issued on: 02 February 2023

Report Revision on: 02 March 2023

Test Result: Compliant

FOR THE SCOPE OF ACCREDITATION UNDER CERTIFICATE NUMBER: 3212.01

Report must not be used by the client to claim product certification, approval, or endorsement by A2LA, NIST, or any agency of the Federal Government.

1 Summary of Test Results

Test Description	Test Specification	Test Result
Antenna requirement	47 CFR Part 15, Subpart C 15.203	Compliant
Field strength of fundamental	15.231(b); RSS-210 A.1.2(a) ANSI C63.10:2013, Section 6.5	Compliant
Field strength of spurious radiation	15.231(b); RSS-210 A.1.2(b) ANSI C63.10:2013, Section 6.5	Compliant
Bandwidth	15.231(c); RSS-210 A.1.3 ANSI C63.10:2013, Section 6.9	Compliant
Deactivation time (manual)	15.231(a)(1); RSS-210 A.1.1(a) ANSI C63.10:2013, Section 7.4	Compliant
Polling transmissions	15.231(a)(3); RSS-210 A.1.1(c)	N/A ¹
Transmission time for setup	15.231(a)(5) ANSI C63.10:2013, Section 7.4	N/A ²
Frequency stability	15.231(d) ANSI C63.10:2013, Section 6.8	N/A ³

Note 1: Not applicable since this device does not use polling or supervision transmissions.

Note 2: Not applicable since the transmission duration limits in paragraph (a)(1) are met.

Note 3: Not applicable since this device does not operate within the frequency band 40.66-40.70MHz.

1.1 Modifications Required for Compliance

None

2 General Information

2.1 Client Information

Name: iKeyless LLC
Address: 12101 Sycamore Station Place, Suite 101
City, State, Zip, Country: Louisville, KY 40299

2.2 Test Laboratory

Name: SGS North America, Inc.
Address: 620 Old Peachtree Road NW, Suite 100
City, State, Zip, Country: Suwanee, GA 30024, USA

Accrediting Body: A2LA
Type of lab: Testing Laboratory
Certificate Number: 3212.01
ISED CAB Identifier: US0186
FCC Designation Number: US1126

2.3 General Information of EUT

Type of Product: Keyless Entry Remote Control
Product Marketing Name (PMN): HNHKL-G050
Model Number (HVIN): HNHKL-G050
Firmware Version ID (FVIN): HNHKL-F010
Sample ID: SUWEM2301000004
FCC ID: X32-HNHKG050
IC: 8797A-HNHKG050

Frequency Range: 433.92 MHz
Modulation: FSK
Antenna: PCB trace loop

Rated Voltage: 3Vdc CR1620 coin cell battery
Test Voltage: 3Vdc CR1620 coin cell battery

Sample Received Date: 01 January 2023
Dates of testing: 24 January to 01 February 2023; March 1, 2023

2.4 Operating Modes and Conditions

The EUT was powered by one standard CR1620 coin cell battery during testing. Two types of samples were provided to SGS: normal and test mode. The test mode sample was configured by the client such that a button press would start a continuous transmit signal using the same modulation and power as a normal transmit signal but with a higher duty cycle than normal to make most testing easier. Pressing a different button would stop the continuous transmit signal. The normal sample was configured to operate as it would in the field with temporary transmissions triggered by pressing the various buttons. This sample was used to test the deactivation time as well as the normal operational duty cycle.

2.6 System Configurations

Device reference	Manufacturer	Description	Model Number	Serial Number
A	iKeyless LLC	Keyless Entry Remote Control	HNHKL-G050	(not labeled) Sample ID: SUWEM2301000004

3 Antenna Requirement

3.1 Result

Test Description	Test Specification	Test Result
Antenna requirement	FCC 15.203	Compliant

3.2 Requirement

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

3.3 Conclusion

The antenna in the device is a loop PCB trace antenna. It is permanently attached and thus meets the antenna requirement.

4 Field Strength of Fundamental

4.1 Test Result

Test Description	Test Specification		Test Result
Field strength of fundamental	15.231(b)	RSS-210 A.1.2	Compliant
	ANSI C63.10:2013, Section 6.5		

Note: Output power was reduced by an average of ~7 dB.

4.2 Test Method

The test data was measured using a Peak detector. Average measurements were made by correcting the peak value with the duty cycle correction factor. The receiver's resolution bandwidth was set to 120 kHz for measurements taken in the 30MHz to 1GHz frequency range and 1MHz for measurements for 1GHz and higher. Measurements were made with the antenna positioned at a 3m distance from the EUT in both the horizontal and vertical planes of polarization. The antenna height was varied from 1 m to 4 m and the EUT was rotated 360° to find the maximum emitting point for each frequency. The radiated measurements were recorded and compared to the limits indicated in the table below.

The EUT was oriented in each of its three orthogonal axes and data for each was reported.

Limits for average value of emissions measured at 3m distance

Fundamental frequency (MHz)	FCC	RSS-210
	Field strength of fundamental (microvolts/meter)	Field strength of fundamental (microvolts/meter)
40.66-40.70	2,250	Not allowed
70-130	1,250	
130-174	1,250 to 3,750 ¹	
174-260	3,750	
260-470	3,750 to 12,500 ¹	
Above 470	12,500	

1) Linear interpolations

From the table above, the fundamental limit for a 433.93 MHz fundamental frequency is determined by linear interpolation to be 80.83 dBuV/m.

5 Field Strength of Spurious Radiation

5.1 Test Result

Test Description	Test Specification		Test Result
Field strength of spurious emissions	15.231(b)	RSS-210, A.1.2	Compliant
	ANSI C63.10:2013, Section 6.5		

5.2 Test Method

Exploratory scans were performed using the max hold function and incorporating a Peak detector and using TILE! software. The final test data was measured using a Quasi-Peak detector below 1GHz and a Peak detector above 1GHz. For harmonics of the fundamental, Average measurements were made by correcting the peak value with the duty cycle correction factor. For emissions other than harmonics of the fundamental, the Average measurements were made using the Average detector. The receiver's resolution bandwidth was set to 120 kHz for measurements taken in the 30MHz to 1GHz frequency range and 1MHz for measurements for 1GHz and higher. Measurements were made with the antenna positioned in both the horizontal and vertical planes of polarization. The antenna height was varied from 1 m to 4 m and the EUT was rotated 360° to find the maximum emitting point for each frequency. The radiated measurements were recorded and compared to the limits indicated in the table below.

The EUT was oriented in each of its three orthogonal axes and data for each was reported.

Limits for average value of emissions measured at 3m distance

Fundamental frequency (MHz)	FCC	RSS-210
	Field strength of spurious emission (microvolts/meter)	Field strength of spurious emission (microvolts/meter)
40.66-40.70	225	Not allowed
70-130	125	
130-174	125 to 375 ¹	
174-260	375	
260-470	375 to 1250 ¹	
Above 470	1250	

1) Linear interpolations

From the table above, the spurious emission limit for a 433.93 MHz fundamental frequency is determined by linear interpolation to be 60.83 dBuV/m.

Spurious emissions shall meet the average limits shown in the table above or to the general limits in §15.209, whichever limit permits a higher field strength.

No discernable emissions detected above noise floor.

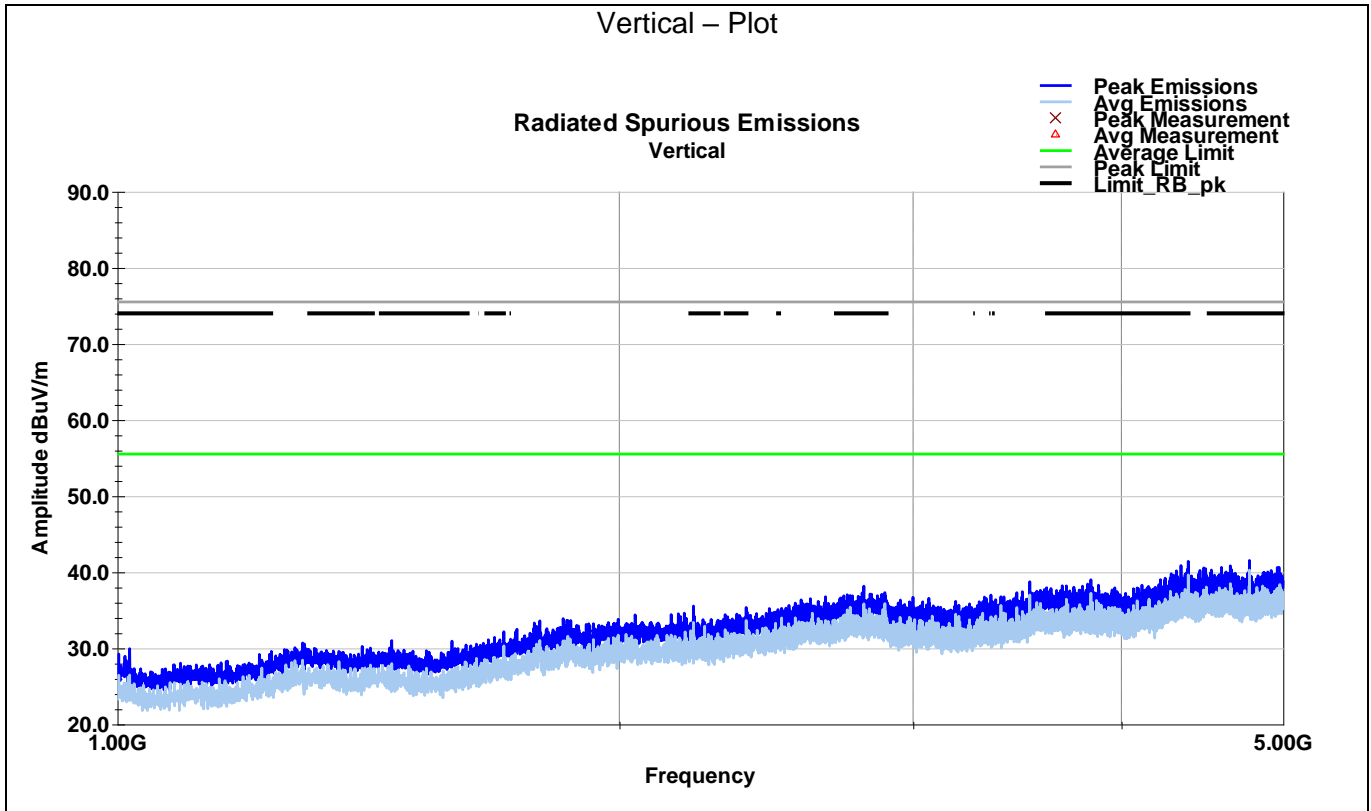

Horizontal – Tabular Data

None

No discernable emissions detected above noise floor.

6 Bandwidth

6.1 Test Result

Test Description	Test Specification		Test Result
20 dB Bandwidth	15.231(c)	RSS-210 A.1.3	Compliant

6.2 Test Method

The procedures from ANSI C63.10 (2013) clause 6.9 were used to determine the 20 dB bandwidth.

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.

6.3 Test Site

SGS EMC Laboratory, Suwanee, GA

Environmental Conditions

Temperature: 21.8 °C

Relative Humidity: 26.7 %

Atmospheric Pressure: 98.7 kPa
