# Laboratories Introduction

Page

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to testing and certification, SIEMIC provides initial design reviews and compliance management throughout a project. Our extensive experience with China, Asia Pacific, North America, European, and International compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the global markets.

### Accreditations for Conformity Assessment

| Country/Region                       | Scope                              |
|--------------------------------------|------------------------------------|
| USA                                  | EMC, RF/Wireless, SAR, Telecom     |
| Canada                               | EMC, RF/Wireless, SAR, Telecom     |
| Taiwan                               | EMC, RF, Telecom, SAR, Safety      |
| Hong Kong                            | RF/Wireless, SAR, Telecom          |

# 4. Equipment Under Test (EUT) Information

| Description of EUT:           | Magic MINI DesFire Reader          |  |
|-------------------------------|------------------------------------|--|
| Main Model:                   | MD382-8N                           |  |
| Serial Model:                 | N/A                                |  |
| Date EUT received:            | September 15, 2017                 |  |
| Test Date(s):                 | September 19 to September 27, 2017 |  |
| Antenna Gain:                 | 13.56MHz: 6dBi                     |  |
| Type of Modulation:           | ASK                                |  |
| RF Operating Frequency (ies): | 13.56MHz                           |  |
| Number of Channels:           | 1 CH                               |  |
| Input Power:                  | 9-15V                              |  |
| Trade Name :                  | N/A                                |  |
| FCC ID:                       | X3A-MD3828N                        |  |

| Test Report No. | 16020762-FCC-R1 |
|-----------------|-----------------|
| Page            | 7 of 37         |

### 5. <u>Test Summary</u>

The product was tested in accordance with the following specifications. All testing has been performed according to below product classification:

| FCC Rules         | Description of Test         | Result     |
|-------------------|-----------------------------|------------|
| §15.203           | Antenna Requirement         | Compliance |
| §15.207(a)        | Conducted Emissions Voltage | Compliance |
| §15.225(a)        | Fundamental Field Strength  | Compliance |
| §15.225(b)        | Fundamental Field Strength  | Compliance |
| §15.225(c)        | Fundamental Field Strength  | Compliance |
| §15.225(d),15.209 | Radiated Emissions          | Compliance |
| §15.225(e)        | Frequency Stability         | Compliance |
| §15.215(c)        | Occupied Bandwidth          | Compliance |

#### **Measurement Uncertainty**

| Emissions   |   |                   |
|---|---|-------------------|
| Test Item   | Description   | Uncertainty       |
| Conducted Emissions &Radiated<br>Spurious Emissions | Confidence level of approximately 95% (in the case where distributions are normal), with a coverage factor of 2 (for EUTs < 0.5m X 0.5m X 0.5m) | 1.634dB / 3.952dB |

### 6. <u>Measurements, Examination And Derived Results</u>

#### 6.1 Antenna Requirement

#### **Applicable Standard**

Requirement(s): 47 CFR §15.203

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

Antenna requirement must meet at least one of the following:

- a) Antenna must be permanently attached to the device.
- b) Antenna must use a unique type of connector to attach to the device.
- c) Device must be professionally installed. Installer shall be responsible for ensuring that the correct antenna is employed with the device.

The antenna is permanently attached to the device which meets the requirement.

Result: Compliance.

# 6.2 Conducted Emissions Voltage

| Temperature                | 25°C               |
|----------------------------|--------------------|
| Relative Humidity          | 50%                |
| Atmospheric Pressure       | 1019mbar           |
| Test date :                | September 19, 2017 |
| Tested By :                | Trety Lu           |
| Conducted Englandary Lingh |                    |

Conducted Emission Limit

| Frequency ranges | Limit (dBµV) |         |  |
|------------------|--------------|---------|--|
| (MHz)            | QP           | Average |  |
| 0.15 ~ 0.5       | 66 – 56      | 56 – 46 |  |
| 0.5 ~ 5          | 56           | 46      |  |
| 5 ~ 30           | 60           | 50      |  |

| Spec             | Item  | Requirement   | Applicable                               |
|------------------|-------|---|--|
| 47CFR§15.20<br>7 | a)    | For Low-power radio-frequency devices that is designed to be<br>connected to the public utility (AC) power line, the radio frequency<br>voltage that is conducted back onto the AC power line on any<br>frequency or frequencies, within the band 150 kHz to 30 MHz, shall<br>not exceed the limits in the following table, as measured using a 50<br>[mu]H/50 ohms line impedance stabilization network (LISN). The<br>lower limit applies at the boundary between the frequency ranges. |  |
| Test Setup       |       | Vertical Ground<br>Reference Plane       Test Receiver         40cm       EUT         40cm       000000000000000000000000000000000000   |  |
| Procedure        | -     | The EUT and supporting equipment were set up in accordance with the of the standard on top of a 1.5m x 1m x 0.8m high, non-metallic table, as Annex B.<br>The power supply for the EUT was fed through a 50W/50mH EUT LISN, filtered mains.<br>The RF OUT of the EUT LISN was connected to the EMI test receiver via coaxial cable.<br>All other supporting equipment were powered separately from another m  | shown in<br>connected to<br>a a low-loss |

### 6.6 20dB Occupied Bandwidth

| Temperature          | 25°C               |
|----------------------|--------------------|
| Relative Humidity    | 50%                |
| Atmospheric Pressure | 1019mbar           |
| Test date :          | September 27, 2017 |
| Tested By :          | Trety Lu           |

Requirement(s):

| Spec                             | Item Requirement  | Applicable   |
|----------------------------------|---|--------------|
| §15.215(c)                       | a) Intentional radiators operating under the alternative provisions to<br>the general emission limits, as contained in §§ 15.217 through<br>15.257 and in Subpart E of this part, must be designed to<br>ensure that the 20 dB bandwidth of the emission, or whatever<br>bandwidth may otherwise be specified in the specific rule<br>section under which the equipment equipment operates, is<br>contained within the frequency band designated in the rule<br>section under which the equipment is operated. The<br>requirement to contain the designated bandwidth of the<br>emission within the specified frequency band includes the<br>effects from frequency sweeping, frequency hopping and other<br>modulation techniques that may be employed as well as the<br>frequency stability of the transmitter over expected variations in<br>temperature and supply voltage. If a frequency stability is not<br>specified in the regulations, it is recommended that the<br>fundamental emission be kept within at least the central 80% of<br>the permitted band in order to minimize the possibility of out-of-<br>band operation. |              |
| Test Setup                       | Spectrum Analyzer EUT   |              |
