

Request for Class II Permissive Change

FCC ID: X3VNT1900MFRM3

Data: Sep 20, 2010

TO: Federal Communication Commission

Please be noticed that we, the undersigned, **Ericsson (China) Communications Company Ltd** declare that the reasons for this Class II permissive change are as below:

The main objective of this change is to provide a solution for service providers to integrate Band Class 14 (which includes the G-band frequency block) into existing deployed networks. The existing 1900 MHZ MFRM3 radio is hardware ready to support G-block carriers. To complete the hardware portion of the G-block solution a RF conditioning block (triplexer) is introduced. The tuning of the radio channels within G-block is software controlled. A software change was implemented for this purpose.

Thank you.
Sincerely,

A handwritten signature in black ink that reads "Henry Guo". The signature is written in a cursive, slightly slanted style.
