## RF EXPOSURE REPORT

For

All In One Panel PC

Model: 3365-199

Trade Name:

Issued for

#### ADLINK TECHNOLOGY INC.

9F, No. 166, Jian Yi Road, Chungho City, Taipei, Taiwan ZIP:235, R.O.C

Issued by

**Compliance Certification Services Inc.** Hsinchu Lab.

NO. 989-1, Wenshan Rd., Shangshan Village, Qionglin Township, Hsinchu County 30741, Taiwan (R.O.C.) http://www.ccsrf.com service@ccsrf.com

Issued Date: April 22, 2016

Note: This report shall not be reproduced except in full, without the written approval of Compliance Certification Services Inc. This document may be altered or revised by Compliance Certification Services Inc. personnel only, and shall be noted in the revision section of the document. The client should not use it to claim product endorsement by TAF or any government agencies. The test results of this report relate only to the tested sample identified in this report.

## 1. Limit

According to §15.247(i), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the Commission's guidelines. See § 1.1307(b)(1) of this chapter.

# 2. EUT Specification

#### 3. Test Results

No non-compliance noted.

#### **Calculation**

Given 
$$E = \frac{\sqrt{30 \times P \times G}}{d}$$
 &  $S = \frac{E^2}{377}$ 

E = Field strength in Volts / meter

P = Power in Watts

G = Numeric antenna gain

d = Distance in meters

S = Power density in watts / meter

Combining equations and re-arranging the terms to express the distance as a function of the remaining variables yields:

$$S = \frac{30 \times P \times G}{377d^2}$$

Changing to units of mW and cm, using:

$$P(mW) = P(W) / 1000$$
 and

$$d(cm) = d(m) / 100$$

**Yields** 

$$S = \frac{30 \times (P/1000) \times G}{377 \times (d/100)^2} = 0.0796 \times \frac{P \times G}{d^2}$$
 **Equation 1**

d = Distance in cm Where

P = Power in mW

G = Numeric antenna gain

 $S = Power density in mW / cm^2$ 

# 4. Maximum Permissible Exposure

Substituting the MPE safe distance using d = 20 cm into Equation 1:

 $S = 0.000199 \times P \times G$ 

Where

P = Power in mW

G = Numeric antenna gain

 $S = Power density in mW / cm^2$ 

#### **IEEE 802.11b mode:**

| Frq.(MHz) | P (mW) | Gain (num.) | D (cm) | Power density in mW / cm <sup>2</sup> | Limit (mW/cm2) |
