| EUT                  | 2.4G Wireless Keyboard  |
| Model Number         | RHTK/B1, RHTK/G1<br>(Note: All models are similar expect their appearance, We prepared RHTK/G1 for test.) |
| Power Supply         | DC 5V   |
| Frequency Range      | 2402 ~ 2480 MHz   |
| Transmit Power       | 1.89dBm   |
| Modulation Technique | FHSS  |
| Transmit Data Rate   | GFSK(1Mbps), $\pi/4$ -DQPSK(2Mbps), 8-DPSK(3Mbps)   |
| Number of Channels   | 79 Channels   |
| Antenna Gain         | 1.5 dBi   |

### 2.2 Test Facility

#### Site Description

EMC Lab.

: Accredited by CNAS, 2005.11.02

The certificate is valid until 2010.11

The Laboratory has been assessed and proved to be in compliance with CNAS-CL01: 2006(identical to ISO/IEC17025:2005)

The Certificate Registration Number is L2291.

Accredited by TUV Rheinland Shenzhen, 2008.3 The

Laboratory has been assessed according to the requirements ISO/IEC 17025

Accredited by FCC, March 18, 2008 The Certificate Registration Number is 709623.

Accredited by Industry Canada, May 24, 2008 The Certificate Registration Number is 46405-4480.

Name of Firm

: SHENZHEN EMTEK CO., LTD

Site Location

: Bldg 69, Majialong Industry Zone, Nanshan District, Shenzhen, Guangdong, China

### 2.3. Measurement Uncertainty

Radiation Uncertainty (30M~1GHz) : Ur =  $\pm 4.26$ dB

Radiation Uncertainty (1G~3GHz) : Ur =  $\pm 2.66$ dB

Radiation Uncertainty (3G~18GHz) : Ur =  $\pm 2.83$ dB

### 3. TEST METHODOLOGY

The tests documented in this report were performed in accordance with ANSI C63.4 and FCC CFR 47 2.1046, 2.1047, 2.1049, 2.1051, 2.1053, 2.1055, 2.1057, 15.207, 15.209 and 15.247.

#### 3.1 EUT Configuration

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner that intends to maximize its emission characteristics in a continuous normal application.

#### 3.2 EUT Exercise

The EUT was operated in the engineering mode to fix the TX frequency that was for the purpose of the measurements.

According to its specifications, the EUT must comply with the requirements of the Section 15.207, 15.209 and 15.247 under the FCC Rules Part 15 Subpart C.

#### 3.3 General Test Procedures

##### **3.3.1 Conducted Emissions**

The EUT is placed on the turntable, which is 0.8 m above ground plane. According to the requirements in Section 13.1.4.1 of ANSI C63.4 Conducted emissions from the EUT measured in the frequency range between 0.15 MHz and 30MHz using Quasi-peak and average detector modes.

##### **3.3.2 Radiated Emissions**

The EUT is placed on a turn table, which is 0.8 m above ground plane. The turntable shall rotate 360 degrees to determine the position of maximum emission level. EUT is set 3m away from the receiving antenna, which varied from 1m to 4m to find out the highest emission. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical. In order to find out the maximum emissions, exploratory radiated emission measurements were made according to the requirements in Section 13.1.4.1 of ANSI C63.4

#### 3.4 Description Of Test Modes

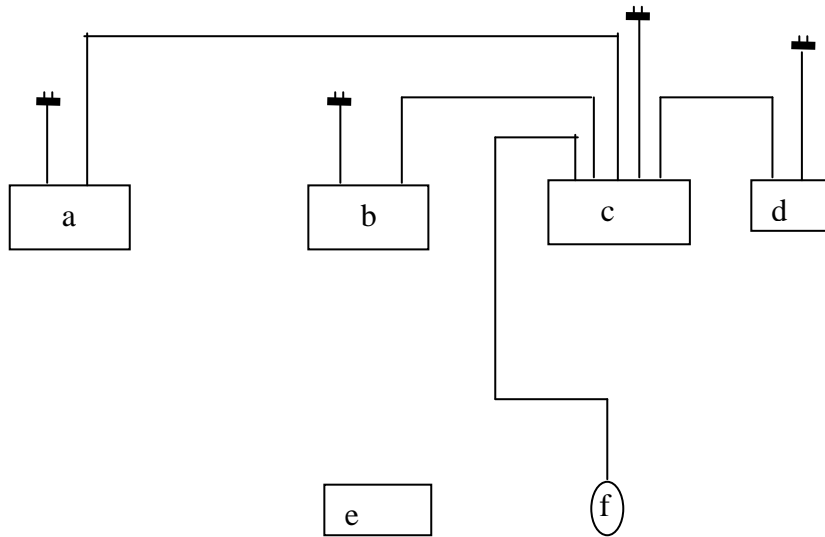

The EUT has been tested under operating condition.

After verification, all tests were carried out with the worst case test modes as shown below except radiated spurious emission below 1GHz, which worst case was in normal link mode only.

Then, the worst case is GFSK(1M) Channel Low (2402MHz), Mid (2441MHz) and High (2480MHz), these were chosen for full testing.

Note: After the preliminary scan GFSK,  $\pi/4$ -DQPSK, 8-DPSK. we found the modulation at GFSK producing the highest emission level, so evaluated we chosen the above modes (worst case ) as a representative.

## 5. FCC PART 15.247 REQUIREMENTS

### 5.1 Peak Power

#### 5.1.1 Test Equipment

| Equipment         | Manufacturer | Model No.    | Serial No. | Last Cal.    | Cal. Interval |
|-------------------|--------------|--------------|------------|--------------|---------------|
| Spectrum Analyzer | Agilent      | E4407B       | MY41440292 | May 29, 2009 | 1 Year        |
| RF Cable          | Hubersuhne   | Sucoflex 104 | FP2RX2     | May 29, 2009 | 1 Year        |
| Power Sensor      | Agilent      | E9327A       | US40441788 | May 29, 2009 | 1 Year        |
| Power Meter       | Agilent      | E4416A       | QB41292714 | May 29, 2009 | 1 Year        |
| DC Filter         | MPE          | 23872C       | N/A        | May 29, 2009 | 1 Year        |

#### 5.1.2 Block Diagram of Test Setup

#### 5.1.3 Limit

According to §15.247(a)(1), Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater.

According to 15.247(b)(1) For frequency hopping system operating in the 2400-2483.5MHz band employing at least 75 non-overlapping hopping channels, and all frequency hopping systems in the 5725-5850MHz band: 1 watt.

#### 5.1.4 Test Procedure

The transmitter output is connected to the Power Meter or spectrum analyzer.

#### 5.1.5 Test Results

| Channel | Frequency (MHz) | Output Power (dBm) | Output Power (mW) | Limit (W) | Result |
|---------|-----------------|--------------------|-------------------|-----------|--------|
| Low     | 2402            | 1.37               | 1.37              | 1         | Pass   |
| Mid     | 2441            | 1.89               | 1.55              | 1         | Pass   |
| High    | 2480            | 1.42               | 1.39              | 1         | Pass   |

## 5.2 Band Edges Measurement

### 5.2.1 Limit

According to §15.247(c), in any 100 kHz bandwidth outside the frequency bands in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in 15.209(a).

### 5.2.2 Test Equipment

| Equipment         | Manufacturer  | Model No. | Serial No. | Last Cal.    | Cal. Interval |
|-------------------|---------------|-----------|------------|--------------|---------------|
| Spectrum Analyzer | Anritsu       | MS2661C   | 6200140915 | May 29, 2009 | 1 Year        |
| Test Receiver     | Rohde&Schwarz | ESCS30    | 828985/018 | May 29, 2009 | 1 Year        |
| Antenna           | Schwarzbeck   | VULB9163  | 142        | May 29, 2009 | 1 Year        |
| Horn-antenna      | Schwarzbeck   | BBHA9120D | D:266      | May 29, 2009 | 1 Year        |
| DC Filter         | MPE           | 23872C    | N/A        | May 29, 2009 | 1 Year        |

### 5.2.3 Block Diagram of Test Setup

### 5.2.4 Test Procedure

The EUT is placed on a turntable, which is 0.8m above the ground plane. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level. EUT is set 3m away from the receiving antenna, which is varied from 1m to 4m to find out the highest emission. Set the spectrum analyzer in the following setting in order to capture the lower and upper band-edges of the emission:

Peak: RBW=VBW=1MHz / Sweep=AUTO

Repeat the procedures until the peak versus polarization are measured.

## 5.3 Frequency Separation

### 5.3.1 Limit

According to §15.247(a)(1), Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW.

### 5.3.2 Test Equipment

| Equipment         | Manufacturer | Model No.   | Serial No. | Last Cal.    | Cal. Interval |
|-------------------|--------------|-------------|------------|--------------|---------------|
| Spectrum Analyzer | Agilent      | E4407B      | MY41440292 | May 29, 2009 | 1 Year        |
| RF Cable          | Hubersuhne   | Sucoflex104 | FP2RX2     | May 29, 2009 | 1 Year        |
| DC Filter         | MPE          | 23872C      | N/A        | May 29, 2009 | 1 Year        |

### 5.3.3 Block Diagram of Test Setup

### 5.3.4 Test Procedure

- Place the EUT on the table and set it in transmitting mode.
- Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to the spectrum analyzer.
- Set center frequency of spectrum analyzer = middle of hopping channel.
- Set the spectrum analyzer as RBW = 30kHz, VBW = 100kHz, Span = 3MHz, Sweep = auto.
- Max hold, mark 2 peaks of hopping channel and record the 2 peaks frequency.

### 5.3.5 Test Results

| Channel Separation (MHz) | 20dB Bandwidth (kHz) | Limit (kHz) | Result |
|--------------------------|----------------------|-------------|--------|
| 1.000                    | 942.010              | >628.01     | Pass   |

## 5.4 Number Of Hopping Frequency

### 5.4.1 Limit

According to §15.247(a)(1)(ii), Frequency hopping systems operating in the 2400MHz- 2483.5 MHz bands shall use at least 75 hopping frequencies.

### 5.4.2 Test Equipment

| Equipment         | Manufacturer | Model No.   | Serial No. | Last Cal.    | Cal. Interval |
|-------------------|--------------|-------------|------------|--------------|---------------|

### 5.4.3 Block Diagram of Test Setup

### 5.4.4 Test Procedure

- A. Place the EUT on the table and set it in transmitting mode.
- B. Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to the spectrum analyzer.
- C. Set spectrum analyzer Start=2400MHz, Stop = 2441.5MHz, Sweep = auto and Start=2441.5MHz, Stop = 2483.5MHz, Sweep = auto.
- D. Set the spectrum analyzer as RBW, VBW=100kHz.
- E. Max hold, view and count how many channel in the band.

### 5.4.5 Test Results

| Result (No. of CH) | Limit (No. of CH) | Result |
|--------------------|-------------------|--------|
| 79                 | >75               | PASS   |

## 5.5 Time Of Occupancy (Dwell Time)

### 5.5.1 Limit

According to §15.247(a)(1)(iii), Frequency hopping systems operating in the 2400MHz-2483.5 MHz bands. The average time of occupancy on any channels shall not greater than 0.4 s within a period 0.4 s multiplied by the number of hopping channels employed.

### 5.5.2 Test Equipment

| Equipment         | Manufacturer | Model No.    | Serial No. | Last Cal.    | Cal. Interval |
|-------------------|--------------|--------------|------------|--------------|---------------|
| Spectrum Analyzer | Agilent      | E4407B       | MY41440292 | May 29, 2009 | 1 Year        |
| RF Cable          | Hubersuhne   | Sucoflex 104 | FP2RX2     | May 29, 2009 | 1 Year        |
| DC Filter         | MPE          | 23872C       | N/A        | May 29, 2009 | 1 Year        |

### 5.5.3 Block Diagram of Test Setup

### 5.5.4 Test Procedure

- Place the EUT on the table and set it in transmitting mode.
- Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to the spectrum analyzer.
- Set center frequency of spectrum analyzer = operating frequency.
- Set the spectrum analyzer as RBW, VBW=1MHz, Span = 0Hz, Sweep = auto.
- Repeat above procedures until all frequency measured were complete.

### 5.5.5 Test Results

#### DH 1

$$0.402 * (1600/2)/79 * 31.6 = 128.64 \text{ (ms)}$$

#### DH 3

$$1.71 * (1600/4)/79 * 31.6 = 273.60 \text{ (ms)}$$

#### DH 5

## 5.6 Spurious Emissions

### 5.6.1 Limit

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).

### 5.6.2 Test Equipment

| Equipment         | Manufacturer | Model No.   | Serial No. | Last Cal.    | Cal. Interval |
|-------------------|--------------|-------------|------------|--------------|---------------|
| Spectrum Analyzer | Agilent      | E4407B      | MY41440292 | May 29, 2009 | 1 Year        |
| RF Cable          | Hubersuhne   | Sucoflex104 | FP2RX2     | May 29, 2009 | 1 Year        |
| DC Filter         | MPE          | 23872C      | N/A        | May 29, 2009 | 1 Year        |

### 5.6.3 Block Diagram of Test Setup

### 5.6.4 Test Procedure

Conducted RF measurements of the transmitter output were made to confirm that the EUT antenna port conducted emissions meet the specified limit and to identify any spurious signals that require further investigation or measurements on the radiated emissions site.

The transmitter output is connected to the spectrum analyzer. The resolution bandwidth is set to 100 KHz. The video bandwidth is set to 100 KHz.

Measurements are made over the 30MHz to 26GHz range with the transmitter set to the lowest, middle, and highest channels.

### 5.6.5 Test Results

### 6.3 Radiated Emission Limit

15.205 (a) Except as shown in paragraph (d) of this section, only spurious emissions are permitted in any of the frequency bands listed below:

| MHz               | MHz                 | MHz           | GHz         |
|-------------------|---------------------|---------------|-------------|
| 0.090-0.110       | 16.42-16.423        | 399.9-410     | 4.5-5.15    |
| \1\ 0.495-0.505   | 16.69475-16.69525   | 608-614       | 5.35-5.46   |
| 2.1735-2.1905     | 16.80425-16.80475   | 960-1240      | 7.25-7.75   |
| 4.125-4.128       | 25.5-25.67          | 1300-1427     | 8.025-8.5   |
| 4.17725-4.17775   | 37.5-38.25          | 1435-1626.5   | 9.0-9.2     |
| 4.20725-4.20775   | 73-74.6             | 1645.5-1646.5 | 9.3-9.5     |
| 6.215-6.218       | 74.8-75.2           | 1660-1710     | 10.6-12.7   |
| 6.26775-6.26825   | 108-121.94          | 1718.8-1722.2 | 13.25-13.4  |
| 6.31175-6.31225   | 123-138             | 2200-2300     | 14.47-14.5  |
| 8.291-8.294       | 149.9-150.05        | 2310-2390     | 15.35-16.2  |
| 8.362-8.366       | 156.52475-156.52525 | 2483.5-2500   | 17.7-21.4   |
| 8.37625-8.38675   | 156.7-156.9         | 2690-2900     | 22.01-23.12 |
| 8.41425-8.41475   | 162.0125-167.17     | 3260-3267     | 23.6-24.0   |
| 12.29-12.293      | 167.72-173.2        | 3332-3339     | 31.2-31.8   |
| 12.51975-12.52025 | 240-285             | 3345.8-3358   | 36.43-36.5  |
| 12.57675-12.57725 | 322-335.4           | 3600-4400     | (\2)        |
| 13.36-13.41       |                     |               |             |

\1\ Until February 1, 1999, this restricted band shall be 0.490-0.510 MHz.

\2\ Above 38.6

Part 15.205 (b) Except as provided in paragraphs (d) and (e), the field strength of emissions appearing within these frequency bands shall not exceed the limits shown in Section 15.209. At frequencies equal to or less than 1000 MHz, compliance with the limits in Section 15.209 shall be demonstrated using measurement instrumentation employing a CISPR quasi-peak detector.

Above 1000 MHz, compliance with the emission limits in Section 15.209 shall be demonstrated based on the average value of the measured emissions. The provisions in Section 15.35 apply to these measurements.

Part 15.209 (a) Except as provided elsewhere in this Subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

| Frequency (MHz) | Field Strength (microvolts/meter) | Measurement Distance (meters) |
|-----------------|-----------------------------------|-------------------------------|
| 30-88           | 100                               | 3                             |
| 88-216          | 150                               | 3                             |
| 216-960         | 200                               | 3                             |
| Above 960       | 500                               | 3                             |

**Notes:**

1. Measuring frequencies from 30 MHz to the 1GHz, No emission found between lowest internal used/generated frequency to 30 MHz.
2. Radiated emissions measured in frequency range from 30 MHz to 1000MHz were made with an instrument using Peak detector mode.
3. Data of measurement within this frequency range shown " --- " in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured.
4. The IF bandwidth of SPA between 30MHz to 1GHz was 100kHz.

### 7.2 Block Diagram of Test Setup

### 7.3 Conducted Emission Limit

For an intentional radiator which is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed 250 microvolts (The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.50 MHz). The limits at specific frequency range is listed as follows:

| Frequency Range (MHz) | Limits (dB $\mu$ V) |          |
|-----------------------|---------------------|----------|
|                       | Quasi-peak          | Average  |
| 0.15 to 0.50          | 66 to 56            | 56 to 46 |
| 0.50 to 5             | 56                  | 46       |
| 5 to 30               | 60                  | 50       |

## 8. ANTENNA REQUIREMENT

### 8.1 Standard Applicable

According to §15.203, Antenna requirement.

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the re-sponsible party shall be used with the device. The use of a permanently attached antenna or of an an-tenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be re-placed by the user, but the use of a standard antenna jack or electrical connector is prohibited. This re-quirement does not apply to carrier current devices or to devices operated under the provisions of Sec-tions 15.211, 15.213, 15.217, 15.219, or 15.221. Further, this requirement does not apply to intentional radiators that must be professionally installed, such as perimeter protection systems and some field dis-turbance sensors, or to other intentional radiators which, in accordance with Section 15.31(d), must be measured at the installation site. However, the installer shall be responsible for ensuring that the proper antenna is employed so that the limits in this Part are not exceeded.

And according to §15.247(4)(1), system operating in the 2400-2483.5MHz bands that are used exclu-sively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum peak output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6 dBi.

### 8.2 Antenna Connected Construction

The directional gains of antenna used for transmitting is 1.5dBi, and the antenna connector is de-signed with permanent attachment and no consideration of replacement. Please see EUT photo for details.

## 9. RADIO FREQUENCY EXPOSURE

### 9.1 Limit

According to §15.247(i), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the Commission's guidelines. See § 1.1307(b)(1) of this chapter.

| <ol style="list-style-type: none"> <li>The maximum output power is <u>1.89dBm (1.55mW) at 2441MHz</u></li> <li>DTS device is not subject to routine RF evaluation; MPE estimate is used to justify the compliance.</li> <li>For mobile or fixed location transmitters, no SAR consideration applied. The minimum separation generally be used is at least 20 cm, even if the calculations indicate that the MPE distance would be lesser.</li> </ol> |   |

### 9.3 Test Results

#### Non-compliance.

(SAR evaluation is not required for the portable device while its maximum output power is lower than the general population low threshold:  $60/f$  (GHz)= $60/2.441=24.58mW$ )
