

Declaration Letter

June 15, 2010

MET Laboratories, Inc.
914 W. Patapsco Ave.
Baltimore, MD 21230

To Whom It May Concern:

- i. The hopping sequence is pseudorandom, all channels are used equally on average, the receiver input bandwidth is approximately equal to the transmit bandwidth and the receiver hops in sequence with the transmitted signal.
- ii. The system is designed to comply with all of the regulations in 15.247 when the transmitter is presented with a continuous data
- iii. The system does not coordinate its channel selection/hopping sequence with other frequency hopping systems for the express purpose of avoiding the simultaneous occupancy of individual hopping frequencies by multiple transmitters.

Product Development Manager

Jon Edwards
