Declaration

Aeon Labs LLC.

PLEACE NOTE:

Working mechanism of Repeater DSD37-ZWUS:

Repeater will not initiate work by itself. When data communication goes smoothly, user will not need to send data to Repeater, therefore repeater will not work under this situation, While when data can not reach its destination, user will have to send message to Repeater such that Repeater can send what has received to destination to complete communication.

Thanks for your attention.
